- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

**Course Outcomes**

- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

2. Complete one of the following options:

**Either**

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

**Course Outcomes**

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

**Course Outcomes**

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.

- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

**And** complete one of the following:

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or Chem 352M or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

**Course Outcomes**

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

(for two credit hours)

CHEM 354 : Organic Chemistry Laboratory--Majors. (2:0:6)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 352 or Chem 352M or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, manipulative skills, isolation and purification, characterization and identification, syntheses.

**Course Outcomes**

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

**Or**

CHEM 462 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 302 & PHSCS 123; Chem 227 or concurrent enrollment; Chem 351M or 351; Phscs 220 or concurrent enrollment.

DESCRIPTION: Quantum mechanics, group theory, atomic and molecular structure, spectroscopy, computational methods, statistical mechanics.

**Course Outcomes**

- Demonstrate understanding of wave functions and operators, including solving for eigenvalues and expectation values
- Solve for properties of model systems, including particle in a box, harmonic oscillator, rigid rotor, Hydrogen-like atoms
- Apply approximation techniques (variation and perturbation) to relate model system to real chemical systems
- Apply quantum models of molecules to interpret spectra and extract information on molecular shape
- Characterize molecular properties by solving for molecular symmetry
- Solve for simple bonding orbitals using valence bond, linear combinations of atomic orbitals and symmetry adapted linear combinations
- Solve for the partition function of molecular systems, including translational, rotational, vibrational and electronic energies

CHEM 463 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 462 & PHSCS 220

RECOMMENDED: Math 302.

DESCRIPTION: Thermodynamics and equilibria, states of matter, kinetic-molecular theory, kinetics, statistical mechanics.

**Course Outcomes**

- Demonstrate connections between molecular interactions and equations of state
- Describe physical and chemical phenomena in terms of molecular and bulk models and understand the limitations of these models
- Describe the kinetics of chemical reactions in terms of molecular mechanisms and empirical rate laws

- Apply the laws of thermodynamics to physical and chemical processes, including phase transitions, mixtures, chemical equilibrium, and electrochemical processes
- Analyze and interpret experimental data to draw conclusions about physical and chemical processes

CHEM 464 : Physical Chemistry Laboratory 1. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 463 or 467 or 468 or concurrent enrollment.

DESCRIPTION: Experiments related to physical chemistry: thermodynamics and equilibria, phase transitions, kinetic-molecular theory, kinetics; computer manipulation of data, report preparation.

NOTE: May be taken before, after, or concurrent (preferred) with Chem 465.

**Course Outcomes**

- Collect quantitative data using a variety of instruments, including calorimeters and spectrometers
- Fit collected data to mathematical models and extract molecular and bulk parameters
- Prepare and present clear graphs and tables, showing data from experiments
- Write clear lab reports in standard scientific journal format
- Prepare and give high quality oral presentations

CHEM 465 : Physical Chemistry Laboratory 2. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 462 or 467 or 468 or concurrent enrollment.

DESCRIPTION: Experiments related to physical chemistry: quantum mechanics, group theory, atomic and molecular structure, spectroscopy, computational methods, statistical mechanics; computer manipulation of data, report preparation.

NOTE: May be taken before, after, or concurrent (preferred) with Chem 464.

**Course Outcomes**

- Collect quantitative spectroscopic data using a variety of instruments, including FT-IR, UV/Vis
- Fit collected data to physical chemical mathematical models and extract molecular parameters
- Perform molecular computations on the molecules in laboratory experiments
- Prepare and present clear graphs and tables, showing data from experiments
- Write clear lab reports in standard scientific journal format

**Note:** When all of the chemistry credit required for a minor is transferred from another school, at least one course in chemistry must be taken at BYU with a grade of C or better—or the student may request to take a standardized national exam covering advanced material required for the minor. Chemistry programs at some schools have been evaluated, and their credit is acceptable for the minor. No more than 3 hours of D credit is allowed for the Chemistry minor.

*Hours include courses that may fulfill university core requirements.

# Minor in Chemistry Education (21.5–23.5 hours*)

Show All Course Descriptions
Hide All Course Descriptions

*This minor is designed to prepare students to teach in public schools. A teaching minor may only be received by students graduating with a teaching major. In order to graduate with this minor, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 350 MCKB, (801) 422-3426.*

## Program Requirements

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete one of the following options:

**Either**

CHEM 111 : Honors Principles of Chemistry. (4:3:3)

OFFERED: Honors also.
WHEN TAUGHT: Fall
PREREQUISITE: Math 110 or equivalent.
RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.
DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.
NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

CHEM 112 : Principles of Chemistry. (3:3:2)

WHEN TAUGHT: Winter
PREREQUISITE: Chem 111 or Chem 105 or equivalent.
DESCRIPTION: Continuation of Chem 111.
NOTE: Tutorial included.

**Course Outcomes**

- Students will be able to use thermodynamic principles and their application to physical and chemical equilibria to calculate entropic and enthalpic contributions to physical changes and reactions and predict equilibria given entropic and enthalpic changes.
- Students will be able to apply acid-base theory, including interactions of strong and weak acids and bases, to determination of pH values of solutions, calculating buffering capacity and performance of acid-base titrations. They will be able to use structural features of molecules to estimate acid and base strength.
- Students will demonstrate an understanding of electrochemistry in designing simple electrodes and will use reduction/oxidation potentials to characterize electrodes.
- Students will be able to apply transition state theory to reaction kinetics. Students will be able to model mathematically rates of multiple reaction types.
- Students will be able to apply the periodic nature of the elements to classify elements and identify the compositions of inorganic salts.

CHEM 113 : Introductory General Chemistry Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Chem 112 or Chem 106 or concurrent enrollment (preferred).
DESCRIPTION: Principles and techniques of chemical measurements. Concepts introduced in general chemistry lecture courses reinforced.

**Course Outcomes**

- Perform precise quantitative measurements using volumetric glassware, analytical balances, and electrochemical and spectrophotometric instrumentation.
- Apply concepts of quantum mechanics, kinetics, equilibrium and thermodynamics taught in Chem 111 and Chem 112 to laboratory measurements.
- Apply a basic understanding of descriptive chemistry introduced in Chem 112 to the separation and classification of inorganic cations and anions.
- Record laboratory procedures and results neatly and concisely in a laboratory notebook
- Report experimental results in a manner that gives proper attention to sources of experimental error.

**Or**

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

**Course Outcomes**

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

**Course Outcomes**

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

3. Complete the following:

CHEM 201 : Chemical Handling and Safe Laboratory Practices. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Safe handling of chemicals and safe practices in chemistry laboratories.

**Course Outcomes**

- Discuss regulations that govern a chemists activities: OSHO, EPA, DOT, CDC, NRC, and state agencies and specifically, the OSHA Laboratory Standard CFR 29 1910.1450 and EPA RCRA regulations (CFR 40) requiring “cradle to grave” responsibility
- Identify chemical hazard classes and follow administrative guidelines to work safely in a laboratory environment and properly store and dispose of chemicals. These guidelines include regulated exposure limits PEL, STEL, IDLH, Ceiling and other measurable standards, such as the TLV, LD50, LC50, SADT, and guidelines for use of compressed gases and cryogenic materials.

- Demonstrate usage of protective equipment available for chemical exposure.
- Respond to laboratory accidents, such as spills, fires, and cuts, and clean up a mercury spill.
- Recognize fire hazards and put out a fire using an ABC fire extinguisher.
- Discuss biological and radiological safety, including biosafety levels, management of biological waste, lasers, and radionuclides.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

**Course Outcomes**

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

**Course Outcomes**

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or Chem 352M or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

**Course Outcomes**

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

(for two credit hours)

4. Complete one course from the following:

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

**Course Outcomes**

- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also

limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

CHEM 227 : Principles of Chemical Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 113

DESCRIPTION: Principles of quantitative analysis, introductory instrumental methods, and computer applications to chemical analysis.

**Course Outcomes**

- Demonstrate skill in performing precise, careful, basic laboratory operations such as sample preparation, calibration techniques, spectrophotometry, electrochemical analysis, titrimetric and chromatographic methods
- Explain basic measurement methods and devices
- Show proficiency in reporting scientific results in numerical, graphical, and written formats, and be able to explain the ethical standards for such reports
- Show proficiency in using computer programs for data analysis
- Apply basic statistics to data analysis including, confidence intervals, t-test, linear regression, propagation of error, sampling statistics and signal-noise enhancement
- Critically evaluate experiments and data with respect to theory and models
- Apply knowledge to new problems, including the design and validation of new analytical methods

CHEM 462 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 302 & PHSCS 123; Chem 227 or concurrent enrollment; Chem 351M or 351; Phscs 220 or concurrent enrollment.

DESCRIPTION: Quantum mechanics, group theory, atomic and molecular structure, spectroscopy, computational methods, statistical mechanics.

**Course Outcomes**

- Demonstrate understanding of wave functions and operators, including solving for eigenvalues and expectation values
- Solve for properties of model systems, including particle in a box, harmonic oscillator, rigid rotor, Hydrogen-like atoms
- Apply approximation techniques (variation and perturbation) to relate model system to real chemical systems
- Apply quantum models of molecules to interpret spectra and extract information on molecular shape
- Characterize molecular properties by solving for molecular symmetry
- Solve for simple bonding orbitals using valence bond, linear combinations of atomic orbitals and symmetry adapted linear combinations
- Solve for the partition function of molecular systems, including translational, rotational, vibrational and electronic energies

CHEM 463 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 462 & PHSCS 220

RECOMMENDED: Math 302.

DESCRIPTION: Thermodynamics and equilibria, states of matter, kinetic-molecular theory, kinetics, statistical mechanics.

**Course Outcomes**

- Demonstrate connections between molecular interactions and equations of state
- Describe physical and chemical phenomena in terms of molecular and bulk models and understand the limitations of these models
- Describe the kinetics of chemical reactions in terms of molecular mechanisms and empirical rate laws
- Apply the laws of thermodynamics to physical and chemical processes, including phase transitions, mixtures, chemical equilibrium, and electrochemical processes
- Analyze and interpret experimental data to draw conclusions about physical and chemical processes

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

**Course Outcomes**

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing

- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

5. Complete the following:

PHY S 377 : Teaching Methods and Instruction. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHY S 276

DESCRIPTION: Developing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Using Science Standards as a quide develop Assessments, Lesson Plans, Outlines, and all parts of a unit of science instruction.
- Inquiry, Constructivism, Lab, Activities, Projects and other methods to engage students in learning. These teaching methods will be modeled and practiced by the students.
- Students will complete Transition 2 level toward teaching license.

**Note:** When all of the chemistry credit required for a minor is transferred from another school, at least one course in chemistry must be taken at BYU with a grade of C or better—or the student may request to take a standardized national exam covering advanced material required for the minor. Chemistry programs at some schools have been evaluated, and their credit is acceptable for the minor.

*Hours include courses that may fulfill university core requirements.

## Undergraduate Courses

### 100-Level Courses

CHEM 100 : Elementary College Chemistry. (3:3:0)

WHEN TAUGHT: Contact Department.
RECOMMENDED: PhyS 100 or equivalent.
DESCRIPTION: Structure of matter and the chemical consequences of that structure.
NOTE: For nonscience and nonmedical majors.

**Course Outcomes**

- Students will be able to view the world around them in chemical terms. Students will use the concepts of atoms, molecules, and their properties to understand a variety of phenomena.
- Students will be able to make basic quantitative calculations regarding a number of chemical concepts in preparation for more rigorous, college-level chemistry courses.

CHEM 101 : Introductory General Chemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 97 or equivalent.
DESCRIPTION: Atomic and molecular structure, periodic relationships, states of matter, chemical reactions and stoichiometry, acids and bases.
NOTE: Primarily for nonscience majors who require a broad introduction to general chemistry.

**Course Outcomes**

- Students will be able to view the world around them in chemical terms. Students will use the concepts of atoms, molecules, and their properties to understand a variety of phenomena.
- Students will be able to make qualitative and/or quantitative predictions regarding a number of chemical concepts including chemical reactions and stoichiometry, calorimetry, osmosis, gases, acid/base chemistry, chemical equilibria, and radioactivity.

CHEM 102 : Concepts of Chemistry. (3:3:0)

WHEN TAUGHT: Winter
DESCRIPTION: The chemical nature of the world and the process of scientific inquiry. Application to critical scientific issues facing society.

**Course Outcomes**

- Students will be able to view the world around them in chemical terms. Students will use the concepts of atoms, molecules, and their properties to understand a variety of phenomena.
- Students will demonstrate the ability to distinguish between reliable and questionable scientific claims as related to current, relevant issues facing society.
- Students will discuss intelligently the relationship between modern science and religious belief.

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the

elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

**Course Outcomes**

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

**Course Outcomes**

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 111 : Principles of Chemistry. (4:3:3)

OFFERED: Honors also.

WHEN TAUGHT: Fall

PREREQUISITE: Math 110 or equivalent.

RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.

DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.

NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

**Course Outcomes**

CHEM 112 : Principles of Chemistry. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 111 or Chem 105 or equivalent.

DESCRIPTION: Continuation of Chem 111.

NOTE: Tutorial included.

**Course Outcomes**

- Students will be able to use thermodynamic principles and their application to physical and chemical equilibria to calculate entropic and enthalpic contributions to physical changes and reactions and predict equilibria given entropic and enthalpic changes.
- Students will be able to apply acid-base theory, including interactions of strong and weak acids and bases, to determination of pH values of solutions, calculating buffering capacity and performance of acid-base titrations. They will be able to use structural features of molecules to estimate acid and base strength.
- Students will demonstrate an understanding of electrochemistry in designing simple electrodes and will use reduction/oxidation potentials to characterize electrodes.
- Students will be able to apply transition state theory to reaction kinetics. Students will be able to model mathematically rates of multiple reaction types.
- Students will be able to apply the periodic nature of the elements to classify elements and identify the compositions of inorganic salts.

CHEM 113 : Introductory General Chemistry Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Chem 112 or Chem 106 or concurrent enrollment (preferred).

DESCRIPTION: Principles and techniques of chemical measurements. Concepts introduced in general chemistry lecture courses reinforced.

**Course Outcomes**

- Perform precise quantitative measurements using volumetric glassware, analytical balances, and electrochemical and spectrophotometric instrumentation.
- Apply concepts of quantum mechanics, kinetics, equilibrium and thermodynamics taught in Chem 111 and Chem 112 to laboratory measurements.
- Apply a basic understanding of descriptive chemistry introduced in Chem 112 to the separation and classification of inorganic cations and anions.
- Record laboratory procedures and results neatly and concisely in a laboratory notebook
- Report experimental results in a manner that gives proper attention to sources of experimental error.

CHEM 195 : Freshman Seminar. (.5:1.0:0)

WHEN TAUGHT: Fall

DESCRIPTION: Impact of chemistry and biochemistry on science and society. Overview of areas of chemistry and undergraduate research. Benefits of a chemistry or biochemistry degree for jobs, graduate or professional school.

**Course Outcomes**

- Students will appreciate the impact of chemistry and biochemistry on society.
- Students will understand the distinctions between the main areas of chemistry and biochemistry.
- Students will recognize the value of a chemistry and biochemistry degree and the range of opportunities for degree holders.
- Students will be aware of options to do undergraduate research.

### 200-Level Courses

CHEM 201 : Chemical Handling and Safe Laboratory Practices. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Safe handling of chemicals and safe practices in chemistry laboratories.

**Course Outcomes**

- Discuss regulations that govern a chemists activities: OSHO, EPA, DOT, CDC, NRC, and state agencies and specifically, the OSHA Laboratory Standard CFR 29 1910.1450 and EPA RCRA regulations (CFR 40) requiring “cradle to grave” responsibility
- Identify chemical hazard classes and follow administrative guidelines to work safely in a laboratory environment and properly store and dispose of chemicals. These guidelines include regulated exposure limits PEL, STEL, IDLH, Ceiling and other measurable standards, such as the TLV, LD50, LC50, SADT, and guidelines for use of compressed gases and cryogenic materials.
- Demonstrate usage of protective equipment available for chemical exposure.
- Respond to laboratory accidents, such as spills, fires, and cuts, and clean up a mercury spill.
- Recognize fire hazards and put out a fire using an ABC fire extinguisher.
- Discuss biological and radiological safety, including biosafety levels, management of biological waste, lasers, and radionuclides.

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

**Course Outcomes**

- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

CHEM 227 : Principles of Chemical Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 113

DESCRIPTION: Principles of quantitative analysis, introductory instrumental methods, and computer applications to chemical analysis.

**Course Outcomes**

- Demonstrate skill in performing precise, careful, basic laboratory operations such as sample preparation, calibration techniques, spectrophotometry, electrochemical analysis, titrimetric and chromatographic methods
- Explain basic measurement methods and devices
- Show proficiency in reporting scientific results in numerical, graphical, and written formats, and be able to explain the ethical standards for such reports
- Show proficiency in using computer programs for data analysis
- Apply basic statistics to data analysis including, confidence intervals, t-test, linear regression, propagation of

error, sampling statistics and signal-noise enhancement
- Critically evaluate experiments and data with respect to theory and models
- Apply knowledge to new problems, including the design and validation of new analytical methods

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

**Course Outcomes**

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

CHEM 297R : Research Training Experience. (.5-3:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Developing competence in methods of research, safe practices, and application of classroom knowledge to research problems leading to confidence and independence in research work.

**Course Outcomes**

- The student will develop the fundamental skills necessary to participate in mentored research in future semesters with a specific research group under the tutelage of a faculty member.

**300-Level Courses**

CHEM 331 : Guided Learning for Chemistry Instruction. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 107; or CHEM 113

RECOMMENDED: Chem 201.

DESCRIPTION: Methods for guiding the learning of high school chemistry students, including modeling of instruction and practice in preparing and conducting demonstrations.

**Course Outcomes**

- Develop and broaden an understanding of the explanations of natural phenomena with chemistry principles to encourage student interest in the world around them.Develop and broaden an understanding of the explanations of natural phenomena with chemistry principles to encourage student interest in the world around them.
- Enrich and supplement the chemical principles and concepts learned in university chemistry courses to fully understand basic chemical principles.
- Develop and refine a variety of laboratory and problem solving strategies: dimensional analysis, microscale chemistry, Virtual ChemLab, and inquiry methods.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

**Course Outcomes**

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 351M : Organic Chemistry - Majors. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and

mechanisms, syntheses.

NOTE: For majors in chemistry and biochemistry.

**Course Outcomes**

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

**Course Outcomes**

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 352M : Organic Chemistry--Majors. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 351M; or CHEM 351

DESCRIPTION: Continuation of Chem 351M.

**Course Outcomes**

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or Chem 352M or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

**Course Outcomes**

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 354 : Organic Chemistry Laboratory--Majors. (2:0:6)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 352 or Chem 352M or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, manipulative skills, isolation and purification, characterization and identification, syntheses.

**Course Outcomes**

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.

- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 355 : Organic Chemistry Laboratory 2 - Nonmajors. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 353

DESCRIPTION: Physical and chemical properties, isolation, purification, characterization, identification, and syntheses of organic compounds.

**Course Outcomes**

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 391 : Technical Writing Using Chemical Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 227 & CHEM 352; or CHEM 227 & CHEM 352M

DESCRIPTION: Intensive technical writing course based on chemical literature sources.

NOTE: Fulfills GE Advanced Writing requirement.

**Course Outcomes**

- Communicate the results of scientific experiments in oral reports, technical graphics, and written reports.
- Search the chemical literature for published works relevant to a project of interest, and to read and understand technical literature related to the discipline.
- Draw on classroom knowledge to contribute to solutions of problems encountered in a research laboratory.
- Make informed choices among post-graduate opportunities for work or further education.
- Understand professional and scientific ethics.

**400-Level Courses**

CHEM 455 : Synthesis and Qualitative Organic Analysis. (3:1:6)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 354; or CHEM 353; Chem 201 or concurrent enrollment.

DESCRIPTION: Laboratory course emphasizing isolation, purification, and characterization of major and minor products from selected syntheses.

NOTE: For chemistry and other science majors.

**Course Outcomes**

- Critically evaluate literature references, in particular experimental reaction details including reagents, starting materials, solvent, temperature, apparatus, stoichiometry, and scale. Adapt and modify known procedures to design and execute new reactions to obtain desired products on small and moderate scales (mg–g).
- Monitor and evaluate the successful completion of reactions using TLC with various solvents and modes, solvent changes and co-spot interpretation.
- Work up reactions using the appropriate organic and aqueous system based on polarity and acid/base properties including drying and solvent removal operations.
- Perform basic purification operations using recrystallization, distillation, chromatography with proper choice of solvents, techniques, mode of operation, etc. based on the properties of the product compound.
- Evaluate purity and identification of structures using hands on operation of NMR, IR, MS, and polarimetry.
- Prepare sample, set up and obtain routine 1D 1H and 13C NMR spectra showing adequate signal locking, shimming, formatting, data processing, spectra interpretation with complete peak assignment.
- Demonstrate understanding of NMR theory including magnetic field resonance, radio frequency pulse sequences, shift, splitting, polarization transfer, signal correlation, 2D experiments including homo and heterocorrelation spectroscopy, COSY, HSQC, NOESY, and multiple bond techniques, HMBC, TOCSY
- Demonstrate understanding of MS theory including ionization techniques, EI, CI, FAB, ES, MALDI, detection techniques, fragmentation patterns of functional groups, molecular ion, base peak, isotopes, N-rule.
- Demonstrate understanding of polarimetry theory including plane polarized light, interaction with chiral compounds, optical rotation and determination of enantiomeric excess.
- Write clear lab reports including clear experimental detail, operation, characterization, interpretation, evaluation, and conclusions.

CHEM 462 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 302 & PHSCS 123; Chem 227 or concurrent enrollment; Chem 351M or 351; Phscs 220 or concurrent enrollment.

DESCRIPTION: Quantum mechanics, group theory, atomic and molecular structure, spectroscopy, computational methods, statistical mechanics.

**Course Outcomes**

- Demonstrate understanding of wave functions and operators, including solving for eigenvalues and expectation values

- Solve for properties of model systems, including particle in a box, harmonic oscillator, rigid rotor, Hydrogen-like atoms
- Apply approximation techniques (variation and perturbation) to relate model system to real chemical systems
- Apply quantum models of molecules to interpret spectra and extract information on molecular shape
- Characterize molecular properties by solving for molecular symmetry
- Solve for simple bonding orbitals using valence bond, linear combinations of atomic orbitals and symmetry adapted linear combinations
- Solve for the partition function of molecular systems, including translational, rotational, vibrational and electronic energies

CHEM 463 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 462 & PHSCS 220

RECOMMENDED: Math 302.

DESCRIPTION: Thermodynamics and equilibria, states of matter, kinetic-molecular theory, kinetics, statistical mechanics.

**Course Outcomes**

- Demonstrate connections between molecular interactions and equations of state
- Describe physical and chemical phenomena in terms of molecular and bulk models and understand the limitations of these models
- Describe the kinetics of chemical reactions in terms of molecular mechanisms and empirical rate laws
- Apply the laws of thermodynamics to physical and chemical processes, including phase transitions, mixtures, chemical equilibrium, and electrochemical processes
- Analyze and interpret experimental data to draw conclusions about physical and chemical processes

CHEM 464 : Physical Chemistry Laboratory 1. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 463 or 467 or 468 or concurrent enrollment.

DESCRIPTION: Experiments related to physical chemistry: thermodynamics and equilibria, phase transitions, kinetic-molecular theory, kinetics; computer manipulation of data, report preparation.

NOTE: May be taken before, after, or concurrent (preferred) with Chem 465.

**Course Outcomes**

- Collect quantitative data using a variety of instruments, including calorimeters and spectrometers
- Fit collected data to mathematical models and extract molecular and bulk parameters
- Prepare and present clear graphs and tables, showing data from experiments
- Write clear lab reports in standard scientific journal format
- Prepare and give high quality oral presentations

CHEM 465 : Physical Chemistry Laboratory 2. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 462 or 467 or 468 or concurrent enrollment.

DESCRIPTION: Experiments related to physical chemistry: quantum mechanics, group theory, atomic and molecular structure, spectroscopy, computational methods, statistical mechanics; computer manipulation of data, report preparation.

NOTE: May be taken before, after, or concurrent (preferred) with Chem 464.

**Course Outcomes**

- Collect quantitative spectroscopic data using a variety of instruments, including FT-IR, UV/Vis
- Fit collected data to physical chemical mathematical models and extract molecular parameters
- Perform molecular computations on the molecules in laboratory experiments
- Prepare and present clear graphs and tables, showing data from experiments
- Write clear lab reports in standard scientific journal format

CHEM 467 : Physical Chemistry for Engineers. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 351 & MATH 302 & PHSCS 121; Ch En 263.

DESCRIPTION: Quantum mechanics, atomic and molecular structure, spectroscopy, computational methods, statistical mechanics, thermodynamics and equilibria, states of matter, kinetic-molecular theory, kinetics.

NOTE: For chemical engineering majors and other interested students in fields of engineering and physical science.

**Course Outcomes**

- understand the fundamentals of classical thermodynamics, quantum mechanics, reaction kinetics, and statistical mechanics, including foundational principles, key mathematical relationships and derivations, at a deeper, more rigorous level than Chem 111H and 112.
- be able to relate atomic/molecular properties and interactions to bulk properties and vice versa.
- be able to interpret atomic and molecular spectra in terms of quantum mechanical models.
- be able to describe the kinetics of chemical reactions in terms of molecular mechanisms and empirical rate laws.
- be able to apply the laws of thermodynamics to physical and chemical processes.
- be able to analyze and interpret experimental data to draw conclusions about chemical processes from a wide range of disciplines, including chemistry, biology, engineering and geology.
- be able to develop and use models, both conceptual and mathematical, of physical and chemical phenomena and understand the limitations of these models.

CHEM 468 : Biophysical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MATH 113 & PHSCS 220; or CHEM 481M & MATH 113 & PHSCS 220

DESCRIPTION: Applications of physical chemistry to biological systems. Spectroscopic applications, computational methods, structural biochemistry, thermodynamics, equilibria, statistical mechanics, transport properties, kinetics, quantum mechanics.

NOTE: For biochemistry (BS) majors and those interested in the health professions or biochemistry. (For prerequisites, Phscs 220 may be taken concurrently.)

**Course Outcomes**

- Describe conceptually the fundamental concepts in the four principal areas of physical chemistry: classical thermodynamics, statistical thermodynamics kinetics and quantum mechanics
- Define mathematically the concepts outlined in 1) and manipulate the fundamental and derived equations associated with these concepts
- Use the above skills to calculate or predict the equilibrium conditions or direction of spontaneous biochemical processes that are involved in metabolism or energy transfer events given appropriate thermodynamic data and initial system conditions
- Employ mathematical and graphical techniques on enzyme kinetic data to extract key parameters and to identify inhibition mechanisms
- Solve simple Schroedinger equation problems (e.g., particle in a box), identify boundary conditions, and explain the significance of boundary conditions on the observance of quantized effects
- Relate the simple Hamiltonians from above to biological molecules and systems and generalize from the simple results to make predictions regarding behavior in the biological systems
- Identify the nature of electronic energy levels in key photoactive biological molecules and use spectroscopic data to probe these levels
- Apply fundamental concepts of electronic structure and reaction kinetics to the steps in photosynthesis and vision
- Provide examples in which physical chemistry perspectives have enabled a deeper more complete understanding of the structure and function of biological molecules and complex biological systems

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

**Course Outcomes**

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

CHEM 481M : Biochemistry--Majors. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry and biochemistry majors only. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

**Course Outcomes**

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

**Course Outcomes**

- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated.

Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

CHEM 489 : Structural Biochemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 468

DESCRIPTION: Molecular structures of proteins, RNA and DNA as determinants of biological function. Topics include thermodynamics of folding and binding, structural determination, spectroscopy, modeling, protein recognition.

**Course Outcomes**

- Identify motifs and symmetries in macromolecular structures and chemical interactions that maintain structural integrity
- Relate the structure of a macromolecule to its biological function
- Describe how X-ray crystallography, nuclear magnetic resonance, cryogenic electron microscopy, and circular dichroism techniques give structural information for biological macromolecules
- Communicate scientific ideas (e.g. structure-function relationships) clearly and concisely to others orally and in writing, and use ethical standards in oral and written presentations
- Work with peers to answer scientific questions

CHEM 495 : Senior Seminar. (1:1:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 594R

DESCRIPTION: Research topics presented by faculty and visiting scientists. Completion of undergraduate portfolio.

NOTE: Required of all seniors in all chemistry and biochemistry degree programs the last semester in residence.

**Course Outcomes**

- Become familiar with a variety of current research areas by listening to numerous visiting researchers describe their recent research results.
- Prepare for seminar presentations by reading literature articles written by visiting speakers before attending the presentation.
- Improve science-writing skills by writing summaries of research papers.
- Take notes in presentations attended to record thoughts and ideas for future reference.
- Reflect on your BYU education and evaluate how it helps you achieve your goals.

CHEM 496R : Academic Internship: Chemistry and Biochemistry. (.5-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent; Chem 201 or concurrent enrollment or special safety training.

DESCRIPTION: Research experience in an industrial, academic, or government laboratory in collaboration with a BYU faculty colleague/supervisor.

**Course Outcomes**

- The student will carry out a successfull internship connecting classroom principles to real-world applications.
- The students will provide a written report or oral presentation explaining the technical work performec in the internship and its connection to the chemistry curriculum.

CHEM 497R : Undergraduate Special Problems. (.5-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent and Chem 201 or concurrent enrollment or special safety training.

DESCRIPTION: Undergraduate research experience.

**Course Outcomes**

- The student will participate in mentored research with a specific research group under the tutelage of a faculty member, and generate original scientific results.

CHEM 499R : Honors Thesis. (.5-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent and Chem 201 or concurrent enrollment or special safety training.

**Course Outcomes**

- The students will carry out a research project and write an acceptable honors thesis.

## 500-Level Graduate Courses (available to advanced undergraduates)

CHEM 500 : (Chem-C S-Geol-Math-MthEd-Phscs-Stat) Business Career Essentials in Science and Math. (1.5:1.5:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills necessary to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.
- Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

CHEM 514 : Inorganic Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 462; or CHEM 468

DESCRIPTION: In-depth treatment of theoretical concepts in inorganic chemistry and solid state, organmetallic, and bioinorganic chemistry.

**Course Outcomes**

- Students will be able to describe atoms and molecules.
- Students will be able to describe the physical and electronic properties of inorganic compounds such as metals, ionic solids, coordination compounds and nanomaterials
- Students will be able to assign point groups and deduce the symmetries of atomic orbitals, molecular orbitals, and molecular vibrations
- Students will be able to draw and name coordination compounds
- Students will be able to identify stable organometallic compounds, common organometallic reactions, and catalytic mechanisms
- Students will be able to describe several metalloproteins
- Students will be able to write and orally present a report on an element or family of elements

CHEM 518 : Advanced Inorganic Laboratory. (2:0:6)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 514; Chem 201 or 601 or concurrent enrollment.

DESCRIPTION: Synthesis, characterization, and properties of materials; coordination and organometallic compounds.

**Course Outcomes**

- Students will be able to safely and with proficiency handle solvents, chemicals, glassware, and instruments.
- Students will be able to use solid-state techniques to synthesize compounds and characterize the compounds they synthesize.
- Students will be able to synthesize, isolate, characterize and explain the properties of main group, coordination, organometallic, and bioinorganic compounds.
- Students will be able to write scientific lab reports.
- Students will be able to work independently and in small groups to complete laboratory experiments.

CHEM 521 : Instrumental Analysis Lecture. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 462 & PHSCS 220; or CHEM 467 & PHSCS 220; or CHEM 468 & PHSCS 220

DESCRIPTION: Modern instrumental methods and basic principles of instrumentation.

**Course Outcomes**

- Students will be able to work independently and in small groups to complete laboratory experiments.
- Discuss the role of the main components of each instrument, how each component works, and how varying a parameter of a given component will affect the overall measurement
- Discuss the roles of sample type, interferences, sensitivity, and selectivity when selecting appropriate instrumental methods for given chemical analysis problems
- Interpret results from each measurement technique
- Discuss ways to optimize signal, noise, interferences, and other limitations to measurement, and quantitatively describe the effect these have on the measurement result
- Discuss sampling methods and requirements for instrumental analysis

CHEM 523 : Instrumental Analysis Laboratory. (2:0:6)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 521; Chem 201 or 601 or concurrent enrollment.

DESCRIPTION: Continuation of Chem 521. Laboratory experience with modern analytical instrumentation.

**Course Outcomes**

- Make accurate chemical analyses using a variety of instrumental techniques
- Describe their findings clearly and concisely in writing, including interpretation of results and statistical analysis
- Present data in graph and/or tabular formats effectively
- Apply what they have learned about instrumental analysis to carry out a new procedure of their own design
- Explain observations made during the course of an experiment
- Discuss how experimental variables affect the outcome of a measurement
- Identify appropriate instrumental methods for given chemical analysis problems, taking into account such factors as sample type, interferences, sensitivity, and selectivity
- Identify and resolve problems when they arise in analyses

CHEM 552 : Advanced Organic Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 352M; or CHEM 352; Chem 462 and 463 (or Chem 468).

DESCRIPTION: Physical aspects of organic chemistry; mechanisms, reaction intermediates, bonding, stereochemical and stereoelectronic effects, molecular orbital theory, Lewis acidity and basicity.

**Course Outcomes**

- Predict relative energies and locations of frontier molecular orbitals for organic molecules of intermediate complexity using linear combinations of atomic orbitals and hybridized orbital approaches.
- Perform calculations using ab initio, semi-empirical, density functional, and molecular mechanics approaches to predict energies and structures of ground and transition states.
- Use reaction kinetics, linear free energy relationships, isotope labeling, stereo-electronic effects and stereochemical outcomes to determine reaction mechanisms.
- Predict reaction mechanisms of major classes of organic reactions, including substitutions, eliminations, additions and radical reactions.
- Recognize the impact of non-covalent interactions in complex systems and reaction mechanisms.

CHEM 553 : Advanced Organic Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 352; or CHEM 352M

DESCRIPTION: Synthetic aspects of organic chemistry; oxidations, reductions, concerted reactions, stereoselectivity, synthetic equivalents, protecting groups. Examples of natural product total synthesis.

**Course Outcomes**

- Formulate a retrosynthetic analysis and propose a total synthesis route for a previously un-synthesized complex natural product.
- Apply protecting group strategies in feasible routes to complex natural products and/or other organic molecules of biological or theoretical interest.
- Recognize and be able to apply standard methods for carbon-carbon bond forming reactions including: alkylation of nucleophilic carbon; reactions of carbanions with carbonyl groups; reactions involving transition metals; reactions of compounds of boron, silicon, and tin; and cycloadditions.
- Recognize and be able to apply standard methods for carrying out the following types of synthetic transformations: reductions of carbonyls and other functional groups, oxidations, electrophilic additions, aromatic substitution reactions.
- Predict reaction mechanisms for the reaction types listed in outcomes 3 and 4.

CHEM 555 : Organic Spectroscopic Identification. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 352M; or CHEM 352

DESCRIPTION: Theory and practice of spectrometric methods of identifying organic compounds, including infrared, ultraviolet nuclear magnetic resonance, and mass spectrometries.

**Course Outcomes**

- Students will develop problem-solving skills by identifying the molecular structure of organic compounds using multiple spectrometric techniques including IR, UV, MS, and NMR (both 1D and 2D spectra).
- Students will receive training on the open-access research instruments used for spectrometric analysis. This includes the IR, UV, MS, NMR spectrometers and the polarimeter, with an emphasis on 1D and 2D NMR methods.
- Students will complete an unknown identification project that gives them practice preparing their own samples, operating the instruments to acquire their own spectra and interpreting this data to identify their unknowns.

CHEM 561 : Chemical Thermodynamics. (3:3:0)

WHEN TAUGHT: Fall Contact Department

PREREQUISITE: CHEM 462 & CHEM 463

DESCRIPTION: Development of the principles of chemical thermodynamics, including laws, pure materials, mixtures, equilibria, and elementary statistical mechanics.

**Course Outcomes**

There are no course outcomes available

CHEM 563 : Reaction Kinetics. (3:3:0)

WHEN TAUGHT: Winter Even Yrs., Contact Department

PREREQUISITE: CHEM 462 & CHEM 463

DESCRIPTION: Theoretical aspects of chemical kinetics in the gas phase and in solution. Rates and mechanisms in solution, rapid reactions, and other topics.

**Course Outcomes**

- Solve simple and complex (coupled or sequential) kin etic expressions to obtain rate constants, reaction lifetimes, and activation energies, for gas, liquid, surface, and catalyzed reactions.
- Use statistical reaction theories, including transition state theory and RRKM, to both predict and interpret chemical reaction rates.
- Interpret the results of experiments that measure dynamic processes, such as cross-molecular beam experiments.
- Use the concepts of detailed balance and microscopic reversibility to connect the results of experiments that measure dynamic processes to experiments that obtain kinetic results.
- Calculate the potential energy surface (PES) for a simple chemical reaction, explain the relationship between the PES and the outcomes of a chemical reaction including how different types of energy influence the reaction given the PES.

CHEM 565 : Introduction to Quantum Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 462 & CHEM 463

DESCRIPTION: Introduction to physical and mathematical aspects of quantum theory, emphasizing application of the Schrodinger wave equation to chemical systems.

**Course Outcomes**

- Write and solve the Schrödinger equation in 1, 2 or 3 dimensions for 1, 2, or N particles for typical model problems and describe the meaning and significance of the solutions.
- Interpret the wavefunctions in #1 by calculating probability in a region, expectation values and matrix elements of Hermitian operators corresponding to physical observables.
- Use as necessary to solve problems: commutators of operators, basis set expansions, perturbation theory (degenerate and nondegenerate) and the variational principle.
- Describe how the Hartree-Fock SCF method works and use Slater determinants of spin and spatial eigenfunctions to build anti-symmetric atomic wavefunctions

CHEM 567 : Statistical Mechanics. (3:3:0)

WHEN TAUGHT: Winter Contact Department

PREREQUISITE: CHEM 462 & CHEM 463

RECOMMENDED: Chem 565.

DESCRIPTION: Introduction to classical and quantum statistical mechanics, including Boltzmann, Fermi-Dirac, and Bose-Einstein statistics. Applications of statistical thermodynamics to gases, liquids, and solids.

**Course Outcomes**

- Use probability density functions to describe a system, and recognize simple probability functions and their properties including Gaussian (normal), binomial (or multinomial), and Poisson distributions.
- Use combinatorics to define probabilities in simple systems.
- Describe how to choose a Gibbsian ensemble for calculation of system properties. Be able to recognize when the following ensembles are appropriate: microcanonical (N,V,E), canonical (N,V,T), grand canonical (V,T,m), isobaric-isothermal (N,T,P). Know how to construct the partition function in each case.
- Calculate average system quantities and thermodynamic variables using the appropriate partition function.
- Calculate the size of fluctuations of system properties and relate them to the number of particles in a system.
- Use proper statistics for classical particles and for quantum particles (bosons or fermions).
- Calculate canonical partition functions for translation, rotation, and harmonic vibration. Use them for applications and know when they don't apply
- Explain the meaning, significance and range of applicability of these fundamentals: ergodic hypothesis, equipartition theorem, and Bose-Einstein condensation.
- Use statistical mechanical principles to describe chemical equilibrium constants.
- Apply statistical mechanical principles to simple crystals, blackbody radiation and imperfect gases.
- Use the Metropolis Monte Carlo method to calculate statistical averages for a system. Know how to choose an efficient sampling method.
- Show how to use molecular dynamics to calculate statistical averages for a molecular system. Know when molecular dynamics is more appropriate than Monte Carlo methods. Know the advantages and disadvantages of common trajectory propagation algorithms.
- Obtain the radial distribution from the probability function for a system, from Monte Carlo calculations or molecular dynamics trajectories and evaluate system properties from the radial distribution function.
- Use Monte Carlo and transfer matrix methods to study a system of interacting spins as a model of phase transitions.

CHEM 569 : Fundamentals of Spectroscopy. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: CHEM 462; or CHEM 468

DESCRIPTION: Atomic and molecular spectroscopy and application of group theoretical concepts. Types of experiments and interpretation of data.

**Course Outcomes**

- Explain the electric and magnetic properties of radiation, molecules and bulk matter and solve problems related to these properties.
- Solve time-dependent quantum mechanical problems and apply these solutions to spectroscopy where light is the time-dependent perturbation.
- Explain angular momentum as possessed by atomic or molecular systems, various descriptions of how angular momentum can be coupled, and how conservation of angular momentum is important to spectroscopy.
- Apply solutions of the Schrödinger equation for simple systems (particle in a box, rigid rotor, harmonic oscillator, etc) to real systems (vibrational, rotational, and electronic energy states) for use in determining the energy of stationary states.
- Explain the origin of selection rules and derive electric and magnetic dipole, quadrupole, etc. selection rules for simple model quantum systems.
- Use symmetry arguments, including group theory and parity, to simplify the interpretation and explanation of atomic and molecular spectra.
- Use solutions to the model systems and the selection rules the predict spectra for atomic and molecular systems.
- Fit experimentally obtained spectra to the mathematical models to obtain physical constants.

CHEM 581 : Advanced Biochemical Methodology 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 482

DESCRIPTION: Analytical and structural determination methods used in biochemical research, including mass spectrometry-based proteomics, immunotechniques, atomic force and electron microscopy, NMR and X-ray diffraction.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 583.

**Course Outcomes**

- Understand the theory, instrumentation and applications of proteomic, immunological and structural methods currently used to address important biochemical questions.
- Interpret and critique data from these techniques.
- Design appropriate experiments and apply these techniques to their own research problems.
- Recognize important technological advances in proteomic, immunological and structural methods.
- Present findings from the primary literature describing the application of these methods to significant biochemical questions in a professional manner.

CHEM 583 : Advanced Biochemical Methodology 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Maintenance and expression of genetic information, the role of nucleic acids in biology at the chemical and structural level, and methods to study and control nucleic acid function as a means of solving biological problems.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 581.

**Course Outcomes**

- Describe how genetic information is stably maintained, how it is expressed, and how that expression is regulated, with an emphasis on the mechanism by which molecular machines perform these processes.
- Understand methods for studying the structure and function of nucleic acids and methods for manipulating gene expression in living systems.
- Interpret and critique data obtained using these methods as reported in the primary scientific literature.
- Communicate this understanding in both oral and written formats. [
- Design appropriate experiments and apply the techniques of nucleic acid biochemistry to their own research problems.

CHEM 584 : Biochemistry Laboratory/Proteins. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Introduction to current biochemical research procedures including spectrophotometry, chromatography, electrophoresis, and immunological techniques. Protein over-expression; isolation and characterization methods. Enzyme kinetics and protein-ligand interactions. Introduction to bioinformatics.

NOTE: May be taken before or after Chem 586.

**Course Outcomes**

- Apply spectroscopic techniques to analyze proteins, both their enzymatic and binding reactions
- Use gel electrophoresis and immunoblotting techniques to determine the presence and purity of proteins in biological samples
- Identify protein binding partners using co-immunoprecipitation methods
- Purify proteins using state-of-the-art separations methods
- Characterize an enzyme using steady state kinetics methods
- Use enzymes as analytical and diagnostic tools
- Properly record and interpret data
- Present data they have collected in an oral presentation and in a written scientific paper
- Understand ethical means of reporting results and giving proper credit to the work of others
- Measure ligand binding to proteins; determine dissociation constants and the degree of cooperativity.

CHEM 586 : Biochemistry Laboratory/Nucleic Acids. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Laboratory course covering major techniques involved in isolation, amplification, and cloning of recombinant DNA as well as isolation, synthesis, translation, and identification of RNA.

NOTE: May be taken before or after Chem 584.

**Course Outcomes**

- Understand, design and execute experiments using basic DNA manipulation procedures that include isolation, purification and modification of DNA
- Explain and perform PCR amplification and use this technique to detect the presence of DNA “targets”, DNA cloning (subcloning) and DNA sequencing
- Understand and explain how to isolate, quantitate and manipulate RNA
- Design and perform experiments to reverse transcribe RNA into complementary DNA (cDNA) and assess gene expression by semi- and quantitative PCR
- Isolate total RNA and be able to purify mRNA from this material
- Introduce and express foreign DNA and/or RNA in mammalian cells using the techniques of electroporation, lipid-based transfection, calcium phosphate based transfection and retroviral transduction
- “Knockdown” an expressed gene in mammalian cells using RNA silencing
- Prepare laboratory notebooks that include the objective, results and methods of each laboratory experiment. Additionally, students will provide conclusions to each experiment, including when appropriate, potential explanations to unexpected results

CHEM 594R : General Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Research topics presented by faculty and visiting scientists.

NOTE: Required one semester in residence of all senior BS majors in chemistry and biochemistry.

**Course Outcomes**

- Become familiar with a variety of current research areas by listening to numerous visiting researchers describe their recent research results.

- Prepare for seminar presentations by reading literature articles written by visiting speakers before attending the presentation.
- Improve science-writing skills by writing summaries of research papers.
- Take notes in presentations attended to record thoughts and ideas for future reference.

CHEM 596R : Special Topics in Chemistry. (.5-3:ARR:0)

WHEN TAUGHT: Contact Department.

**Course Outcomes**

There are no course outcomes available

: Atmospheric Chemistry.

**Course Outcomes**

## Graduate Courses

## Professors

Andrus, Merritt Brooks
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1986
PhD, University of Utah, 1991

Burton, Gregory F.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, University of Utah, 1975
MS, Brigham Young University, 1982
PhD, Medical College of Virginia, 1989

Castle, Steven L.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1995
PhD, The Scripps Research Institute, 2000

Dearden, David V.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1983
PhD, California Institute of Technology, 1989

Farnsworth, Paul B.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1977
PhD, University of Wisconsin, Madison, 1981

Goates, Steven R.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1976
MS, University of Michigan, Ann Arbor, 1977
PhD, University of Michigan, Ann Arbor, 1981

Graves, Steven William
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BA, Brigham Young University, 1969
PhM, Yale University, 1972
PhD, Yale University, 1978

Lamb, John D.
**COLLEGE:** Physical and Mathematical Sciences

**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1971
PhD, Brigham Young University, 1978

Lee, Milton L.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BA, University of Utah, 1971
PhD, Indiana University, 1975

Linford, Matthew R.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1990
MS, Stanford University, 1996
PhD, Stanford University, 1996

Savage, Paul Bennett
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1988
PhD, University of Wisconsin, Madison, 1993

Simmons, Daniel L.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1978
MS, Brigham Young University, 1980
PhD, University of Wisconsin, Madison, 1986

Willardson, Barry Matthew
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BA, Brigham Young University, 1984
PhD, Purdue University, 1990

Woodfield, Brian F.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1986
MS, Brigham Young University, 1988
PhD, University of California, Berkeley, 1995

Woolley, Adam T.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1992
PhD, University of California, Berkeley, 1997

## Associate Professors

Austin, Daniel E.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1998
PhD, California Institute of Technology, 2003

Asplund, Matthew Chas
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1992

PhD, University of California, Berkeley, 1998

Buskirk, Allen Rowdon

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1999
PhD, Harvard University, 2004

Hansen, Jaron C.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Utah State University, 1997
PhD, Purdue University, 2002

Harrison, Roger G.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Utah State University, 1986
PhD, University of Utah, 1993

Patterson, James E.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1996
MS, Brigham Young University, 1998
PhD, University of Illinois, Urbana-Champaign, 2004

Peterson, Matt Anders

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Utah State University, 1987
BS, Utah State University, 1987
PhD, University of Arizona, 1992

Sevy, Eric T.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1994
MA, Columbia University, 1995
PhM, Columbia University, 1998
PhD, Columbia University, 1999

Shirts, Randall Brent

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1973
AM, Harvard University, 1978
PhD, Harvard University, 1979

Watt, Richard K.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1993
PhD, University of Wisconsin-Madison, 1998

## Assistant Professors

Anderson, Joshua L.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2001
**DEGREES:** PhD, University of Utah, 2006

Ess, Daniel H.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2000
**DEGREES:** PhD, University of California, Los Angeles, 2007

Michaelis, David J.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2005
**DEGREES:** PhD, University of Wisconson—Madison, 2009

Price, John C.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Professor
**DEGREES:** BS/BA, Utah State University, 2001
PhD, Pennyslvania State University, 2005

Price, Joshua L.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2003
PhD, University of Wisconsin, 2008

Prince, John T.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2000
PhD, University of Texas, Austin, 2008

Smith, Stacey Janel
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2007
PhD, Brigham Young University, 2012

## Teaching Professor

Wood, Steven Glen
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Teaching Professor
**DEGREES:** BS, Brigham Young University, 1973
MS, Brigham Young University, 1975
PhD, Brigham Young University, 1983

## Associate Teaching Professors

Bronson, Robert Todd
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Teaching Professor
**DEGREES:** BS, Brigham Young University, 1996
PhD, Brigham Young University, 2003

Macedone, Jeffrey
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Teaching Professor
**DEGREES:** BS, Brigham Young University, 1999
PhD, Brigham Young University, 2004

Nielson, Jennifer Burrows

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Associate Teaching Professor
**DEGREES:** BS, Brigham Young University, 1988
MS, University of California, San Diego, 1992
PhD, University of California, San Diego, 1997

## Assistant Teaching Professors

Burt, Scott R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Teaching Professor
**DEGREES:** BS, Brigham Young University, 2004
PhD, University of California at Berkeley, 2008

Sansom, Rebecca L.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Chemistry and Biochemistry
**RANK:** Assistant Teaching Professor
**DEGREES:** BS, Boston University, 2001
MS, Harvard University, 2005
MS, Southern Utah University, 2013

College of Physical and Mathematical Sciences Advisement Center
N-179 ESC, (801) 422-2674
1112 TMCB, (801) 422-7253

## Admission to Degree Program

The BS in Computer Science and the Bioinformatics Emphasis degree programs in the Department of Computer Science are open enrollment. The Animation Emphasis is limited enrollment and requires admission. For more information about the CS Animation Emphasis, visit cs.byu.edu/animation.

## The Discipline

Computer science touches virtually every area of human endeavor. Software is responsible for everything from the control of kitchen appliances to sophisticated climate models used in predicting future environmental change. Students in computer science learn to approach complex problems in business, science, and entertainment using their strong background in mathematics, algorithms, and data structures.

The degree programs in the Computer Science Department prepare students to be confident software developers and technical problem solvers. The curriculum also trains students for research into new avenues where computers will have a significant impact.

The BS curriculum is accredited by the Computing Accreditation Commission of ABET.

## Career Opportunities

Graduates pursue exciting opportunities in graphics, artifical intelligence, software engineering, database design, scientific programming, systems administration, and research at universities and national laboratories.

Students completing the animation emphasis will be prepared for technical positions at animation and game programming studios. Students will learn both the technical and artistic side of creating and implementing digital animations and games.

The Bioinformatics emphasis is designed for students who are interested in building software to assist in analyzing biological systems. Students will graduate with a significant background in biology coupled with the software development and analysis skills necessary to implement large bioinformatics applications.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

## Undergraduate Programs and Degrees

**BS in Computer Science** (Program Outcomes)
**Animation Emphasis (optional)** (Program Outcomes)
**Bioinformatics Emphasis (optional)** (Program Outcomes)

**Minor in Computer Science**
**Minor in Computer Science Teaching**

Students should see their college advisement center for help or information concerning the undergraduate programs.

## Graduate Programs and Degrees

MS in Computer Science
PHD in Computer Science

For more information see the BYU 2014–2015 Graduate Catalog.

## Animation Degree Program

The BFA in animation is an interdisciplinary degree offered by the College of Fine Arts and Communications through the cooperative involvement of the Department of Theatre and Media Arts, the Department of Visual Arts, and the College of Physical and Mathematical Sciences' Computer Science Department. Please see the Visual Arts section of this catalog for degree requirements, or go to the College of Fine Arts and Communications Advisement Center for more information about entrance requirements to this program.

## General Information

Personnel in the College of Physical and Mathematical Sciences Advisement Center will advise regarding core courses and suggested general education. Questions regarding curriculum and career decisions should be directed to the undergraduate advisor in the Computer Science Department.

**Note:** All hours of credit applied toward a major in computer science must be of C– or better. Students may choose to graduate under later requirements by updating their date of entry into the major at the college advisement center.

Although not required, CS 100 is strongly recommended for students who have had very little or no prior programming experience.

## Program Requirements | View MAP | View Program Outcomes

1. Grades below C- are not allowed in major courses.
2. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

C S 224 : Introduction to Computer Systems. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 142; or instructor's consent.

DESCRIPTION: How a computer works, from hardware to high-level programming. Logic circuits, computer instructions, assembly language, binary arithmetic, C programming, program translation, data structures, and algorithm analysis.

**Course Outcomes**

There are no course outcomes available

C S 235 : Data Structures and Algorithms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 142

DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

**Course Outcomes**

- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- Write programs that require ~500 lines of code.

C S 236 : Discrete Structures. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: C S 235

DESCRIPTION: Introduction to grammars and parsing; predicate and propositional logic; proof techniques; sets, functions, relations, relational data model; graphs and graph algorithms.

**Course Outcomes**

- Understand and be conversant with basic discrete mathematical structures (finite state machines, regular expressions, grammars, propositional calculus, proof techniques, predicate calculus, sets, relations, functions, graphs).Write complex programs by using mathematical concepts as the basis for solving programming problems (finite state machines for lexical analysis; grammars for parsing; propositional and predicate calculus for logic programming; sets and algebras for relational databases; algebras, graphs, and topological sorting for optimizing datalog query processing).Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.Design a solution for a programming problem and justify the design as one that is maintainable and extendable by other programmers who understand and are conversant with discrete mathematical structures.
- Demonstrate ability to build large programs by writing and integrating code from a diverse spectrum of program components.

C S 240 : Advanced Programming Concepts. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 236

DESCRIPTION: Advanced software development with an object-oriented focus. Design, implementation, and testing of several large programs in a Java and Linux environment using current technologies.

**Course Outcomes**

- a. Use coding, testing, and debugging strategies. b. Follow basic object-oriented design concepts.
- Write programs in an Object Oriented programming language using inheritance, polymorphism and class hierarchies.
- Use the Linux programming environment to execute basic commands and to run the compiler, linker, debugger, memory checker, and profiler.
- Demonstrate the aptitude and work ethic necessary to succeed in computer science.

C S 252 : Introduction to Computational and Probabilistic Models in Computer Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 236 or concurrent enrollment.

DESCRIPTION: Computational models: regular grammars, context-free grammars, Turing machines. Complexity theory: big-O and complexity classes P, NP, NP-complete, and f-NP. Probabilistic Models: Introduction to probability theory, random variables, joint distributions, Bayes rules, Bayes networks.

**Course Outcomes**

- Understand the three computing paradigms (DFAs, PDA, Turing Machine) and their language-based equivalents (regular languages,context-free languages, computable algorithms).
- Categorize problems into one of the existing paradigms.
- Understand the difference between and limitations of paradigms.
- Understand the difference between computable (decidable) and practically computable (tractable).
- Design and justify solutions to problems of decidability and tractability.

C S 312 : Algorithm Design and Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240 & C S 252

DESCRIPTION: A study of the design and analysis of algorithms as solutions to problems, including dynamic programming, linear programming, greedy algorithms, divide-and-conquer algorithms, graph algorithms, and intelligent search algorithms.

**Course Outcomes**

There are no course outcomes available

C S 340 : Software Design and Testing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240

DESCRIPTION: Principles of software design, design patterns, design representation, refactoring. Principles of software quality assurance and testing. Development and testing tools.

**Course Outcomes**

- Articulate the principles of effective software design.
- Know when and how to apply various design patterns.
- Demonstrate how to effectively document and communicate software designs.
- Understand what quality assurance is, know how to build quality into software using review techniques, and demonstrate quality evaluation through testing.
- Use a variety of software development tools, including IDEs, automation tools, static analysis tools, source code control systems, unit testing tools, and documentation tools.
- Work effectively in a group to produce quality software using 1-5 above.

C S 404 : Ethics and Computers in Society. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240 & ENGL 316

DESCRIPTION: Societal impact of computer technology, the computer scientist's place in society, ethical issues. Reading, discussion, and writing seminar.

**Course Outcomes**

- Articulate connections between the gospel of Jesus Christ and their professional life.
- Analyze, write about, and discuss issues and ethical problems related to computing and the application of evolving technologies in society.
- Appreciate the history of computing as a means for students to sharpen their sense of their own future.
- Students will understand the need for continuing education in their careers.

3. Complete one course from the following:

C S 345 : Operating Systems Design. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 224 & C S 240

DESCRIPTION: Principles and concepts of operating systems design and the implementation of an operating system.

**Course Outcomes**

- Describe the basic components of an operating system and their role in implementations for general purpose, real-time, and embedded applications.
- Define the concepts of processes, threads, asynchronous signals and competitive system resource allocation.
- Show how a shell works.
- Explain what multi-tasking is and outline standard scheduling algorithms for multi-tasking.
- Discuss mutual exclusion principles and their use in concurrent programming, including semaphore construction and resource allocation.
- Give an overview of system memory management.
- Explain how file systems are implemented.
- Discuss the features and strengths of various contemporary operating systems.
- Implement a functional, pre-emptive, multi-tasking operating system written in C, including a shell, scheduler, file manager, memory manager, and synchronization components.

C S 360 : Internet Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Internet application programming, including sockets, threads, CGI, database, e-commerce, Web services.

**Course Outcomes**

- Design and implement a variety of client-server and web applications.
- Analyze the performance of a web server, write convincingly to support your conclusions and give an oral report to describe your findings.
- Implement a web server using processes, semaphores, threads, sockets and signals.
- Use a set of web programming languages to implement an application.
- Use security to protect their web application.

4. Complete the following supporting courses:

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

RECOMMENDED: Math 290.

DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

5. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

6. Complete eight courses from the following three options:
   A. Six to eight of the courses could be from the following:

C S 256 : Designing the User Experience. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 142

DESCRIPTION: Studio-critique style course on user experience design. Contextual inquiry to identify user needs. Iterative solution design using sketching and storyboards. Human perception and visual design principles. Rapid prototyping and evaluation of proposed solutions.

**Course Outcomes**

There are no course outcomes available

C S 330 : Concepts of Programming Languages. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Principles and concepts characterizing high-level computer programming languages, process and data abstration, encapsulation, inheritance, functional programming, logic programming, scanners, and parsers.

**Course Outcomes**

- Learn the vocabulary of programming language design, syntax, and semantics
- Be able to write programs using non-imperative language paradigms.

C S 345 : Operating Systems Design. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 224 & C S 240
DESCRIPTION: Principles and concepts of operating systems design and the implementation of an operating system.

**Course Outcomes**

- Describe the basic components of an operating system and their role in implementations for general purpose, real-time, and embedded applications.
- Define the concepts of processes, threads, asynchronous signals and competitive system resource allocation.
- Show how a shell works.
- Explain what multi-tasking is and outline standard scheduling algorithms for multi-tasking.
- Discuss mutual exclusion principles and their use in concurrent programming, including semaphore construction and resource allocation.
- Give an overview of system memory management.
- Explain how file systems are implemented.
- Discuss the features and strengths of various contemporary operating systems.
- Implement a functional, pre-emptive, multi-tasking operating system written in C, including a shell, scheduler, file manager, memory manager, and synchronization components.

C S 355 : Interactive Graphics and Image Processing. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: C S 240
DESCRIPTION: Introduces basic concepts of computer graphics, user interfaces and image processing. Includes homogenous coordinate transforms, image transforms, event driven programming and color models. Extends Model-View-Controller architecture.

**Course Outcomes**

There are no course outcomes available

C S 360 : Internet Programming. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: C S 240
DESCRIPTION: Internet application programming, including sockets, threads, CGI, database, e-commerce, Web services.

**Course Outcomes**

- Design and implement a variety of client-server and web applications.
- Analyze the performance of a web server, write convincingly to support your conclusions and give an oral report to describe your findings.
- Implement a web server using processes, semaphores, threads, sockets and signals.
- Use a set of web programming languages to implement an application.
- Use security to protect their web application.

Any 400-level computer science courses (except C S 404, 405, and C S 498R).
EC EN 424 : Computer Systems. (4:3:3)
WHEN TAUGHT: Winter
PREREQUISITE: EC EN 330
DESCRIPTION: Machine-level representations of programs and data, processor architecture, program performance optimizaton, memory hierarchies, virtual memory, linking, exceptions.

**Course Outcomes**

There are no course outcomes available

EC EN 425 : Real-Time Operating Systems. (4:3:3)
WHEN TAUGHT: Fall
PREREQUISITE: EC EN 324; or EC EN 330
DESCRIPTION: Hardware/software interface, real-time kernel internals, implementation of high-level language constructs, issues in real-time application software development.

**Course Outcomes**

- Ability to apply C and assembly programming languages and knowledge of the hardware/software interface to the design and implementation of a real-time kernel.
- Ability to design and implement a real-time application.
- Ability to design and implement a real-time kernel.
- Ability to use C programs, compilers, and debuggers in the design and implementation of real-time application software.
- Ability to write interrupt service routines.
- Ability to use a real-time operating system as a tool in the development of real-time application software.

IT 567 : Cyber Security and Penetration Testing. (3:2:3)
WHEN TAUGHT: Winter
PREREQUISITE: IT 466 or C S 465 or I Sys 560 or equivalent content course from another institution.
DESCRIPTION: Advanced computer systems security. Vulnerabilities and exploits. System and network

attacks. Ethical hacking and penetration testing. Cyber security, cyber weapons, and advanced persistent threats. Legal and regulatory requirements for security and privacy.

**Course Outcomes**

- 1. Explain the regulatory and legal requirements, and rationale for penetration testing
- 2. Hold an in-depth discussion about the ethics of cyber-security and other associated domains.
- 3. Demonstrate the use of various security tools, their application in a penetration test and be able to explain how such tools may be abused.
- 4. Illustrate clearly, by means of a written report and verbal presentation, the results of a penetration test with clear recommendations.
- 5. Explain how exploits and vulnerabilities are discovered and the correct protocols to report these for vendor fixes.
- 6. Be able to discuss new threat-types such as APT's and Cyber-Weapons and use these to explain why lifelong learning is critical for a security professional.

**Note:** If C S 401R is chosen, it must be taken for three hours.

B. One of the eight courses could be from the following:
C S 498R: Special Topics
Any 500-level computer science course.

**Note:** If either C S 498R or 501R is chosen, it must be taken for three hours.

C. One of the eight courses could be from the following career deepening electives:
BIO 130 : Biology. (4:3:1)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

**Course Outcomes**

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 165 : Introduction to Bioinformatics. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: Introduction to basic concepts in bioinformatics. Standard bioinformatic applications.

**Course Outcomes**

There are no course outcomes available

BIO 365 : Computational Biology. (3:2:1)
WHEN TAUGHT: Fall
PREREQUISITE: C S 240
DESCRIPTION: Computational analysis of DNA data; introduction to bioinformatics databasing using Perl and SQL; configuration of UNIX workstations for bioinformatics analyses.

**Course Outcomes**

- To provide practical experience in using computational approaches to address biological problems.
- Describe general areas of computational problems in biology (alignment, estimation, tree searches, molecular modeling, gene prediction) and learn about existing computational approaches to these general problems.
- Learn basic computational tools for statistical inference (Bayesian, Maximum likelihood, Markov Chain Monte Carlo, Hidden Markov Chain)
- Apply programming skills to alignment problems through the development of novel tools and software for alignment
- Apply programming skills to tree searching problems through the development of novel tools software
- Apply programming tools to gene prediction problems through the development of novel tools and software
- Develop ability to use existing and write new database code to access and manipulate genetic

data

CHEM 111 : Principles of Chemistry. (4:3:3)

OFFERED: Honors also.

WHEN TAUGHT: Fall

PREREQUISITE: Math 110 or equivalent.

RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.

DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.

NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

**Course Outcomes**

C S 405 : Creating and Managing a Software Business. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department

PREREQUISITE: C S 240 & ENGL 316

DESCRIPTION: Entrepreneurship, idea/opportunity generation, strategic planning, legal organization, product development, marketing/sales, customer support, fund raising, and effective management.

**Course Outcomes**

- Students will write a business plan for a company they are proposing.

EC EN 370 : (EC En - Math 431) Probability Theory. (3:3:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: MATH 313

DESCRIPTION: Axiomatic probability theory, conditional probability, discrete / continuous random variables, expectation, conditional expectation, moments, functions of random variables, multivariate distributions, laws of large numbers, central limit theorem.

**Course Outcomes**

- A basic understanding of probabilistic reasoning and the foundations of probability theory: sample spaces, event algebras, classical probability, and Kolmogorov's axioms.
- An understanding of random variables, distribution functions, probability mass functions, and probability density functions, including the uniform, binomial, Poisson, exponential, and Gaussian distributions.
- An understanding of multivariate distributions, independence, conditioning, and functions of random variables, including the ability to compute expectations, moments, and correlation functions.
- An understanding of characteristic functions and their relationship to linear transformations and independence.
- An understanding of convergence concepts, including the central limit theorem and the law of large numbers.
- The ability to apply probability theory to the analysis of engineering systems.

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format

references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.

- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 313.

DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 113 and Math 313.

DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

MATH 355 : Graph Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 313

DESCRIPTION: Maps, graphs and digraphs, coloring problems, applications.

**Course Outcomes**

- Graphs, trees, pathes and cycles, connectedness, chromatic number, planarity conditions, genus of a graph, the Five Color Theorem. Students should also be aware of Kuratowsky's Theorem, and the Four Color Theorem. If there is time, it is good to do the proof of Kuratowski's Theorem. For more detailed information visit the Math 355 Wiki page.

MATH 425 : Mathematical Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 112

DESCRIPTION: Using tools in mathematics to help biologists. Motivating new mathematics with questions in biology.

**Course Outcomes**

- Students should gain a familiarity with how the disciplines of mathematics and biology can complement each other. Increasingly, mathematics is used to understand complexbiological systems. Without some familiarity with the mathematicaltechniques, it is difficult to know how to interpret the results. Inthis class a variety of applications to medicine and biology will bestudied, highlighting the different mathematical techniques. Theobjective of the class is not only to introduce the students tovarious applications and methods but also to help determine the strengthsand weaknesses of different methods. For more detailed information visit the Math 425 Wiki page.

MATH 485 : Mathematical Cryptography. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 313

RECOMMENDED: Math 371.

DESCRIPTION: A mathematical introduction to some of the high points of modern cryptography.

**Course Outcomes**

- Students should know the definitions, being familiar with standard examples, and being able to solve mathematical and algorithmic problems by directly using the material taught in the course. This includes appropriate use of Maple, Mathematica, or another appropriate computing language. For more detailed information visit the Math 485 Wiki page.

MMBIO 151 : Introduction to Microbiology. (4:3:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Chem 105 or concurrent enrollment.

DESCRIPTION: Principles of prokaryotic biology emphasizing cell structure, function, and metabolism. Introduction to bacterial genetics, microbial diversity, and microbial ecology.

**Course Outcomes**

- Understand what microbes are, what they are composed of, how they are built, and their phylogenetic relationships to the living world. Be able to distinguish between eukaryotes, prokaryotes, and viruses.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" five of which are microbial physiology, microbial genetics, microbial ecology, medical microbiology, and virology
- Become familiar with the tools of microbiology through both lecture and labs and demonstrate basic aseptic technique. Develop proficiency in working with bacteria including streaking for isolation and performing growth experiments.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" three of which are microbial physiology, microbial genetics, microbial ecology
- Formulate questions, testable hypotheses and implement appropriate experimental protocol. Collect and analyze data and be able to draw appropriate conclusions.*Relates to Program Learning Outcome: “Devise experiments with appropriate hypotheses and controls.”
- Integrate knowledge to make informed judgments on tests, lab reports, lab presentations and lab write-ups*Relates to Program Learning Outcome: "Communicate scientific information using both oral and written methods"
- Obtain a deeper appreciation for the complexity, diversity and purposes of life.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles"

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

**Course Outcomes**

There are no course outcomes available

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 127 : Descriptive Astronomy. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

**Course Outcomes**

- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 240 : Discrete Probability. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Set theory; discrete probability; conditional probability; finite sample spaces; discrete random variables (pdf, cdf, moments).

**Course Outcomes**

- Apply fundamentals of set theory and basic set operations
- Enumerate the elements of a discrete sample space
- Demonstrate familiarity with counting techniques---sampling with order, without order, binomial coefficients
- Solve probability problems in finite sample spaces
- Solve problems using axioms of probability, conditional probability, independence, and Bayes theorem
- Calculate expected values and variances of discrete random variables
- Understand the assumptions and properties of the named discrete distributions (Bernoulli, binomial, Poisson, geometric)
- Solve problems with the pdf, cdf, moments of discrete univariate random variables

*Hours include courses that may fulfill university core requirements.

*This is a limited-enrollment program requiring departmental admissions approval. Please see the department office for information regarding requirements for admission to this program.*

Application deadline: April 15 and October 15 after completing the prerequisite courses listed below.

## Program Requirements | View MAP | View Program Outcomes

1. Grades below C- are not allowed in major courses.
2. Complete the following prerequisite courses:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Knowledge of algebra.
DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

C S 235 : Data Structures and Algorithms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: C S 142
DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

**Course Outcomes**

- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- Write programs that require ~500 lines of code.

VASTU 101 : Introduction to Art and Drawing for Non-Majors. (3:2:4)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Readings, aesthetic topics, basic drawing techniques and concepts.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

No outcomes are available at this time.

3. Apply to the program.

4. Complete the following after being admitted to the program:

C S 224 : Introduction to Computer Systems. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 142; or instructor's consent.

DESCRIPTION: How a computer works, from hardware to high-level programming. Logic circuits, computer instructions, assembly language, binary arithmetic, C programming, program translation, data structures, and algorithm analysis.

**Course Outcomes**

There are no course outcomes available

C S 236 : Discrete Structures. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: C S 235

DESCRIPTION: Introduction to grammars and parsing; predicate and propositional logic; proof techniques; sets, functions, relations, relational data model; graphs and graph algorithms.

**Course Outcomes**

- Understand and be conversant with basic discrete mathematical structures (finite state machines, regular expressions, grammars, propositional calculus, proof techniques, predicate calculus, sets, relations, functions, graphs).Write complex programs by using mathematical concepts as the basis for solving programming problems (finite state machines for lexical analysis; grammars for parsing; propositional and predicate calculus for logic programming; sets and algebras for relational databases; algebras, graphs, and topological sorting for optimizing datalog query processing).Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.Design a solution for a programming problem and justify the design as one that is maintainable and extendable by other programmers who understand and are conversant with discrete mathematical structures.
- Demonstrate ability to build large programs by writing and integrating code from a diverse spectrum of program components.

C S 240 : Advanced Programming Concepts. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 236

DESCRIPTION: Advanced software development with an object-oriented focus. Design, implementation, and testing of several large programs in a Java and Linux environment using current technologies.

**Course Outcomes**

- a. Use coding, testing, and debugging strategies. b. Follow basic object-oriented design concepts.
- Write programs in an Object Oriented programming language using inheritance, polymorphism and class hierarchies.
- Use the Linux programming environment to execute basic commands and to run the compiler, linker, debugger, memory checker, and profiler.
- Demonstrate the aptitude and work ethic necessary to succeed in computer science.

C S 252 : Introduction to Computational and Probabilistic Models in Computer Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 236 or concurrent enrollment.

DESCRIPTION: Computational models: regular grammars, context-free grammars, Turing machines. Complexity theory: big-O and complexity classes P, NP, NP-complete, and f-NP. Probabilistic Models: Introduction to probability theory, random variables, joint distributions, Bayes rules, Bayes networks.

**Course Outcomes**

- Understand the three computing paradigms (DFAs, PDA, Turing Machine) and their language-based equivalents (regular languages,context-free languages, computable algorithms).
- Categorize problems into one of the existing paradigms.
- Understand the difference between and limitations of paradigms.
- Understand the difference between computable (decidable) and practically computable (tractable).
- Design and justify solutions to problems of decidability and tractability.

C S 312 : Algorithm Design and Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240 & C S 252

DESCRIPTION: A study of the design and analysis of algorithms as solutions to problems, including dynamic programming, linear programming, greedy algorithms, divide-and-conquer algorithms, graph algorithms, and intelligent search algorithms.

**Course Outcomes**

There are no course outcomes available

C S 340 : Software Design and Testing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240

DESCRIPTION: Principles of software design, design patterns, design representation, refactoring. Principles of software quality assurance and testing. Development and testing tools.

**Course Outcomes**

- Articulate the principles of effective software design.
- Know when and how to apply various design patterns.
- Demonstrate how to effectively document and communicate software designs.
- Understand what quality assurance is, know how to build quality into software using review techniques, and demonstrate quality evaluation through testing.
- Use a variety of software development tools, including IDEs, automation tools, static analysis tools, source code control systems, unit testing tools, and documentation tools.
- Work effectively in a group to produce quality software using 1-5 above.

C S 355 : Interactive Graphics and Image Processing. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Introduces basic concepts of computer graphics, user interfaces and image processing. Includes homogenous coordinate transforms, image transforms, event driven programming and color models. Extends Model-View-Controller architecture.

**Course Outcomes**

There are no course outcomes available

C S 360 : Internet Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Internet application programming, including sockets, threads, CGI, database, e-commerce, Web services.

**Course Outcomes**

- Design and implement a variety of client-server and web applications.
- Analyze the performance of a web server, write convincingly to support your conclusions and give an oral report to describe your findings.
- Implement a web server using processes, semaphores, threads, sockets and signals.
- Use a set of web programming languages to implement an application.
- Use security to protect their web application.

C S 404 : Ethics and Computers in Society. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240 & ENGL 316

DESCRIPTION: Societal impact of computer technology, the computer scientist's place in society, ethical issues. Reading, discussion, and writing seminar.

**Course Outcomes**

- Articulate connections between the gospel of Jesus Christ and their professional life.
- Analyze, write about, and discuss issues and ethical problems related to computing and the application of evolving technologies in society.
- Appreciate the history of computing as a means for students to sharpen their sense of their own future.
- Students will understand the need for continuing education in their careers.

C S 455 : Computer Graphics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: C S 355 & MATH 313

DESCRIPTION: Interactive computer graphics systems programming and architecture.

**Course Outcomes**

- Students will be proficient in basic computer graphics algorithms such as modeling, trnasformations and rendering.Students will design and code solutions to several programming problems in graphics using algorithms and data structures.In addition, sutudents will use these techniques to program a large semester project.

5. Complete the following supporting courses:

CSANM 150 : Introduction to Three-Dimensional Computer Graphics. (1.5:1.5:1.5)

WHEN TAUGHT: Spring

DESCRIPTION: Fundamentals of modeling, texturing, lighting, and rendering used in exploring principles and elements of three-dimensional design.

**Course Outcomes**

There are no course outcomes available

CSANM 354 : Shader Programming. (3:3:3)

WHEN Fall

TAUGHT:
DESCRIPTION: Shading and rendering techniques for the attainment of desired visual effects: use of shading languages for the realization of both photorealistic and non-photorealistic imaging.
NOTE: Course changed to CSAnm 354 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 450R : Advanced Senior Film Production 1. (3:3:3)

WHEN TAUGHT: Fall
DESCRIPTION: In-depth experiences creating computer animations and visual effects. Senior film front-end development and introduction to full animation production.
NOTE: Course changed to CSAnm 450 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.
NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a

variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Calculus or concurrent enrollment.
DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

TMA 102 : Introduction to Film. (3:4:2)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Analytical studies for understanding and appreciating media forms and messages, as well as basic history, theory, and aesthetics. Lab required.

**Course Outcomes**

- Students will become active, intelligent film viewers
- Students will be exposed to the practical elements of film
- Students will learn about a wide range of stories and stylistic strategies utilized by film artists and institutions
- Students will become familiar with new and helpful ways of receiving films. They will be able to evaluate and analyze films in a variety of contexts.

TMA 294 : History of Animation. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: TMA 102
DESCRIPTION: Origins and developments of animation internationally to the present, focusing on aesthetic, technical, political, and economic aspects of the medium.

**Course Outcomes**

- Students will learn the historical importance of the formation of the animation industry including visionary individuals that shaped the films we see today.

6. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread

- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

7. Complete one course from the following:

C S 256 : Designing the User Experience. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 142

DESCRIPTION: Studio-critique style course on user experience design. Contextual inquiry to identify user needs. Iterative solution design using sketching and storyboards. Human perception and visual design principles. Rapid prototyping and evaluation of proposed solutions.

**Course Outcomes**

There are no course outcomes available

C S 330 : Concepts of Programming Languages. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Principles and concepts characterizing high-level computer programming languages, process and data abstration, encapsulation, inheritance, functional programming, logic programming, scanners, and parsers.

**Course Outcomes**

- Learn the vocabulary of programming language design, syntax, and semantics
- Be able to write programs using non-imperative language paradigms.

C S 345 : Operating Systems Design. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 224 & C S 240

DESCRIPTION: Principles and concepts of operating systems design and the implementation of an operating system.

**Course Outcomes**

- Describe the basic components of an operating system and their role in implementations for general purpose, real-time, and embedded applications.
- Define the concepts of processes, threads, asynchronous signals and competitive system resource allocation.
- Show how a shell works.
- Explain what multi-tasking is and outline standard scheduling algorithms for multi-tasking.
- Discuss mutual exclusion principles and their use in concurrent programming, including semaphore construction and resource allocation.
- Give an overview of system memory management.
- Explain how file systems are implemented.
- Discuss the features and strengths of various contemporary operating systems.
- Implement a functional, pre-emptive, multi-tasking operating system written in C, including a shell, scheduler, file manager, memory manager, and synchronization components.

EC EN 425 : Real-Time Operating Systems. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: EC EN 324; or EC EN 330

DESCRIPTION: Hardware/software interface, real-time kernel internals, implementation of high-level language constructs, issues in real-time application software development.

**Course Outcomes**

- Ability to apply C and assembly programming languages and knowledge of the hardware/software interface to the design and implementation of a real-time kernel.
- Ability to design and implement a real-time application.
- Ability to design and implement a real-time kernel.
- Ability to use C programs, compilers, and debuggers in the design and implementation of real-time application software.
- Ability to write interrupt service routines.
- Ability to use a real-time operating system as a tool in the development of real-time application software.

Any of the 400-level computer science courses (except C S 404, 405, 455, and 498R).

**Note:** If C S 401R is chosen, it must be taken for three hours.

8. Complete one course from the following:

C S 498R : Undergraduate Special Projects. (1-3:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 240

DESCRIPTION: Students identify an interesting problem in computer science and solve it with the aid of faculty members.

**Course Outcomes**

There are no course outcomes available

CSANM 351R : Lighting for Three-Dimensional Graphics. (3:3:3)

WHEN TAUGHT: Winter

DESCRIPTION: Developing lighting and color, and the compiling of the various elements for final images for use in three-dimensional applications.

NOTE: Course changed to CSAnm 351R beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 355 : Photography for Animation. (3:3:3)

WHEN TAUGHT: Spring

DESCRIPTION: Layout, references, camera technology and terminology, application of composition, lighting, and core art skills emphasized.

NOTE: Course changed to CSAnm 355 beginning Fall 2012.

**Course Outcomes**

No outcomes are available at this time.

CSANM 452R : Advanced Senior Film Production 2. (3:3:3)

WHEN TAUGHT: Winter

DESCRIPTION: Portfolio development based on advanced animation/design projects. Senior film production and post production.

NOTE: Course changed to CSAnm 452R beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 458 : Three-Dimensional Visual Effects. (3:3:3)

DESCRIPTION: Exploring procedural and three-dimensional animation methods to create realistic special effects. Applying a large spectrum of animation principles to integrate their effects aesthetically and convincingly into a live action or animated environment.

NOTE: Course changed to CSAnm 458 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

Any course not used in item 7 above.
Any of the 500-level computer science courses.

**Note:** If either C S 498R or C S 501R is chosen, it must be taken for three hours.

9. Complete one course from the following:

ARTHC 111 : Introduction to Art History. (3:3:0)

OFFERED: Honors also.

DESCRIPTION: Topical approach to art history and appreciation.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

ARTHC 202 : World Civilization Since 1500. (3:3:0)

DESCRIPTION: Survey of Western civilization emphasizing the visual arts from the Renaissance to the twentieth century.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

TECH 201 : History of Creativity and Innovation in the Arts, Science, and Technology 1. (3:3:0)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Western civilization from Egyptian antiquity to Renaissance from perspective of changes in civilization enabled by technology. Creativity throughout history. How to improve personal creativity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

*Hours include courses that may fulfill university core requirements.

1. Grades below C- are not allowed in major courses.
2. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

C S 224 : Introduction to Computer Systems. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 142; or instructor's consent.

DESCRIPTION: How a computer works, from hardware to high-level programming. Logic circuits, computer instructions, assembly language, binary arithmetic, C programming, program translation, data structures, and algorithm analysis.

**Course Outcomes**

There are no course outcomes available

C S 235 : Data Structures and Algorithms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 142

DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

**Course Outcomes**

- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- Write programs that require ~500 lines of code.

C S 236 : Discrete Structures. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: C S 235

DESCRIPTION: Introduction to grammars and parsing; predicate and propositional logic; proof techniques; sets, functions, relations, relational data model; graphs and graph algorithms.

**Course Outcomes**

- Understand and be conversant with basic discrete mathematical structures (finite state machines, regular expressions, grammars, propositional calculus, proof techniques, predicate calculus, sets, relations, functions, graphs).Write complex programs by using mathematical concepts as the basis for solving programming problems (finite state machines for lexical analysis; grammars for parsing; propositional and predicate calculus for logic programming; sets and algebras for relational databases; algebras, graphs, and topological sorting for optimizing datalog query processing).Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.Design a solution for a programming problem and justify the design as one that is maintainable and extendable by other programmers who understand and are conversant with discrete mathematical structures.
- Demonstrate ability to build large programs by writing and integrating code from a diverse spectrum of program components.

C S 240 : Advanced Programming Concepts. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 236

DESCRIPTION: Advanced software development with an object-oriented focus. Design, implementation, and testing of several large programs in a Java and Linux environment using current technologies.

**Course Outcomes**

- a. Use coding, testing, and debugging strategies. b. Follow basic object-oriented design concepts.
- Write programs in an Object Oriented programming language using inheritance, polymorphism and class hierarchies.
- Use the Linux programming environment to execute basic commands and to run the compiler, linker, debugger, memory checker, and profiler.
- Demonstrate the aptitude and work ethic necessary to succeed in computer science.

C S 252 : Introduction to Computational and Probabilistic Models in Computer Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 236 or concurrent enrollment.

DESCRIPTION: Computational models: regular grammars, context-free grammars, Turing machines. Complexity theory: big-O and complexity classes P, NP, NP-complete, and f-NP. Probabilistic Models: Introduction to probability theory, random variables, joint distributions, Bayes rules, Bayes networks.

**Course Outcomes**

- Understand the three computing paradigms (DFAs, PDA, Turing Machine) and their language-based equivalents (regular languages,context-free languages, computable algorithms).
- Categorize problems into one of the existing paradigms.
- Understand the difference between and limitations of paradigms.
- Understand the difference between computable (decidable) and practically computable (tractable).
- Design and justify solutions to problems of decidability and tractability.

C S 312 : Algorithm Design and Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240 & C S 252

DESCRIPTION: A study of the design and analysis of algorithms as solutions to problems, including dynamic programming, linear programming, greedy algorithms, divide-and-conquer algorithms, graph algorithms, and intelligent search algorithms.

**Course Outcomes**

There are no course outcomes available

C S 340 : Software Design and Testing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240

DESCRIPTION: Principles of software design, design patterns, design representation, refactoring. Principles of software quality assurance and testing. Development and testing tools.

**Course Outcomes**

- Articulate the principles of effective software design.
- Know when and how to apply various design patterns.
- Demonstrate how to effectively document and communicate software designs.
- Understand what quality assurance is, know how to build quality into software using review techniques, and demonstrate quality evaluation through testing.
- Use a variety of software development tools, including IDEs, automation tools, static analysis tools, source code control systems, unit testing tools, and documentation tools.
- Work effectively in a group to produce quality software using 1-5 above.

C S 360 : Internet Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Internet application programming, including sockets, threads, CGI, database, e-commerce, Web services.

**Course Outcomes**

- Design and implement a variety of client-server and web applications.
- Analyze the performance of a web server, write convincingly to support your conclusions and give an oral report to describe your findings.
- Implement a web server using processes, semaphores, threads, sockets and signals.
- Use a set of web programming languages to implement an application.
- Use security to protect their web application.

C S 404 : Ethics and Computers in Society. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240 & ENGL 316

DESCRIPTION: Societal impact of computer technology, the computer scientist's place in society, ethical issues. Reading, discussion, and writing seminar.

**Course Outcomes**

- Articulate connections between the gospel of Jesus Christ and their professional life.
- Analyze, write about, and discuss issues and ethical problems related to computing and the application of evolving technologies in society.
- Appreciate the history of computing as a means for students to sharpen their sense of their own future.
- Students will understand the need for continuing education in their careers.

C S 418 : Bioinformatics. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department; Spring Contact Department; Summer Contact Department

PREREQUISITE: C S 312

DESCRIPTION: Computational methods for analyzing biological systems. Dynamic programming, Markov models, Neural Networks, and Bayesian analysis are used to predict secondary structure, tertiary structure, and active sites for drug docking given molecular DNA sequence data.

**Course Outcomes**

- Graph Theoretical algorithms, Regulatory Inference
- Large Memory Genomic Mapping, SNP calling
- Develop new research ideas and communicate them effectively

3. Complete the following supporting courses:

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

**Course Outcomes**

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340

DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

**Course Outcomes**

- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.

Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

BIO 465 : Bioinformatics and Proteomics. (3:2:1)

WHEN TAUGHT: Winter

PREREQUISITE: BIO 365

DESCRIPTION: 3-D protein structural comparisons, hidden Markov models for database comparisons, homology detection, multiple sequence analyses, and protein family comparisons. Exercises in computer programming in genomics.

**Course Outcomes**

- Students will learn and demonstrate mastery of advanced analytical bioinformatics techniques, including genome assembly, genome annotation, and protein analyses.
- Demonstrate ability to use and evaluate literature databases and primary literature directed to the bioinformatics community in terms of newly developed software, analytical algorithms, application to empirical data, etc.
- Apply and develop computational skills in secondary (i.e., helices, etc.) and tertiary (i.e., folding, etc.) prediction, and 3-dimensional (i.e., x-ray crystal structures, etc.) modeling of protein structures.
- Apply evolutionary concepts to modeling DNA/proteins to evaluate and/or predict function, utilizing 3D structures, physical and chemical amino acid properties, etc.
- Apply existing and develop new tools for genome assembly and annotation from next-generation DNA sequencing projects

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

RECOMMENDED: Math 290.

DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: BIO 130 & CHEM 105; or PDBIO 120 & CHEM 105; or MMBIO 151 & CHEM 105

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

NOTE: Chem 105 and Chem 111 can also fulfill the prerequisite requirement; contact advisor.

**Course Outcomes**

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion,

both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PWS 340 : Genetics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

**Course Outcomes**

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

4. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for $\mu$ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for $H0 : \mu = \mu0$ from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment

- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

5. Complete five elective courses from any of the 400-level computer science courses (except 404, 405, and 418).

   **Note:** If C S 401R or C S 498R is chosen, it must be taken for 3 hours.

*Hours include courses that may fulfill university core requirements.

## Program Requirements

1. Grades below C- are not allowed in minor courses.
2. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

C S 235 : Data Structures and Algorithms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 142

DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

**Course Outcomes**

- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- Write programs that require ~500 lines of code.

C S 236 : Discrete Structures. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: C S 235

DESCRIPTION: Introduction to grammars and parsing; predicate and propositional logic; proof techniques; sets, functions, relations, relational data model; graphs and graph algorithms.

**Course Outcomes**

- Understand and be conversant with basic discrete mathematical structures (finite state machines, regular expressions, grammars, propositional calculus, proof techniques, predicate calculus, sets, relations, functions, graphs).Write complex programs by using mathematical concepts as the basis for solving programming problems (finite state machines for lexical analysis; grammars for parsing; propositional and predicate calculus for logic programming; sets and algebras for relational databases; algebras, graphs, and topological sorting for optimizing datalog query processing).Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.Design a solution for a programming problem and justify the design as one that is maintainable and extendable by other programmers who understand and are conversant with discrete mathematical structures.

- Demonstrate ability to build large programs by writing and integrating code from a diverse spectrum of program components.

C S 240 : Advanced Programming Concepts. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 236

DESCRIPTION: Advanced software development with an object-oriented focus. Design, implementation, and testing of several large programs in a Java and Linux environment using current technologies.

**Course Outcomes**

- a. Use coding, testing, and debugging strategies. b. Follow basic object-oriented design concepts.
- Write programs in an Object Oriented programming language using inheritance, polymorphism and class hierarchies.
- Use the Linux programming environment to execute basic commands and to run the compiler, linker, debugger, memory checker, and profiler.
- Demonstrate the aptitude and work ethic necessary to succeed in computer science.

3. Complete two additional computer science courses (except C S 100, 199R, 404, 405).

# Minor in Computer Science Teaching (18 hours)

Show All Course Descriptions
Hide All Course Descriptions

*This minor is designed to prepare students to teach in public schools. A teaching minor may only be received by students graduating with a teaching major. In order to graduate with this minor, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 350 MCKB, (801) 422-3426.*

## Program Requirements

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

C S 224 : Introduction to Computer Systems. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 142; or instructor's consent.

DESCRIPTION: How a computer works, from hardware to high-level programming. Logic circuits, computer instructions, assembly language, binary arithmetic, C programming, program translation, data structures, and algorithm analysis.

**Course Outcomes**

There are no course outcomes available

C S 235 : Data Structures and Algorithms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 142

DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

**Course Outcomes**

- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.

- Write programs that require ~500 lines of code.

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: C S 235

DESCRIPTION: Introduction to grammars and parsing; predicate and propositional logic; proof techniques; sets, functions, relations, relational data model; graphs and graph algorithms.

**Course Outcomes**

- Understand and be conversant with basic discrete mathematical structures (finite state machines, regular expressions, grammars, propositional calculus, proof techniques, predicate calculus, sets, relations, functions, graphs).Write complex programs by using mathematical concepts as the basis for solving programming problems (finite state machines for lexical analysis; grammars for parsing; propositional and predicate calculus for logic programming; sets and algebras for relational databases; algebras, graphs, and topological sorting for optimizing datalog query processing).Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.Design a solution for a programming problem and justify the design as one that is maintainable and extendable by other programmers who understand and are conversant with discrete mathematical structures.
- Demonstrate ability to build large programs by writing and integrating code from a diverse spectrum of program components.

C S 240 : Advanced Programming Concepts. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 236

DESCRIPTION: Advanced software development with an object-oriented focus. Design, implementation, and testing of several large programs in a Java and Linux environment using current technologies.

**Course Outcomes**

- a. Use coding, testing, and debugging strategies. b. Follow basic object-oriented design concepts.
- Write programs in an Object Oriented programming language using inheritance, polymorphism and class hierarchies.
- Use the Linux programming environment to execute basic commands and to run the compiler, linker, debugger, memory checker, and profiler.
- Demonstrate the aptitude and work ethic necessary to succeed in computer science.

TEE 377 : Teaching Methods in Technology Education. (2:2:0)

PREREQUISITE: TEE 276B

DESCRIPTION: Developing meaningful and engaging instruction for secondary students in technology education; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Educator Preparation Program OutcomesThis course is part of your preparation for licensure in a major or minor that is part of the BYU Educator Preparation Program (EPP). This course will help you fulfill the EPP Outcomes required for accreditation. Advisors in Education Student Services (350 MCKB / 801-422-3426) can answer questions you have about the licensure requirements (http://education.byu.edu/ess/licensing.html) for your teaching major or minor.As students progress through the Technology and Engineering teacher education program, they should gain knowledge, dispositions and skills that will enable them to become effective teachers. The standards that encompass the knowledge, dispositions and skills that teachers should have are known as the UETS standards and can be found on the TEE Outcomes webpage. The following UETS standards will be addressed in this class (TEE 377).
- UETS Standard 1 - Learner and Development:The teacher understands cognitive, linguistic, social, emotional and physical areas of student development.UETS Standard 3 - Learning Environments:The teacher works with learners to create environments that support individual and collaborative learning, encouraging positive social interaction, active engagement in learning, and self-motivation.UETS Standard 4 - Content Knowledge:The teacher understands the central concepts, tools of inquiry, and structure of the discipline.UETS Standard 5 - Assessment:The teacher uses multiple methods of assessment to engage learners in their own growth, monitor learner progress, guide planning and instruction, and determine whether the outcomes described in the content standards have been met.UETS Standard 6- Instructional Planning:The teacher plans instruction to support students in meeting rigorous learning goals by drawing uopn knowlege of content area, Core Curriculum standards, instructional best practices, and the community context.UETS Standard 7- Instructional Strategies:The teacher uses various instructional strategies to ensure that all learners develop a deep understanding of content areas and their connections, and build skills to apply and extend knowledge in meaningful ways.
- Students will be able to identify the basic theories of student motivation and apply these theories to design classroom instruction for a technology and engineering classroom.Students will be able to identify and differentiate between direct and inquiry- based instruction and to develop lesson plans using both instructional approaches.Students will be able to develop instructional objectives that address cognitive, affective, and psychomotor domains of learning.Students will be able to develop instructional objectives for each of the levels of Blooms taxonomy.Students will be able to develop a disclosure document that outlines classroom procedures and student expectations appropriate for a T&E classroom.Students will be able to identify instructional strategies and teaching methods that might be used in a T&E classroom and to incorporate these strategies into a lesson plan.Students will be able to develop an assessment plan that includes strategies for formative and summative assessment in a T&E classroom.Students will be able to develop a rubric for assessment of a technology and engineering classroom activity.Students will be able to develop a plan for implementing problem solving strategies into their course instruction.Students will be able to identify implications for how students learn; including addressing student pre-conceptions of course content, developing student competence in a content area, and developing strategies for meta-cognition. Students will also be able to identify interventions for each of these areas.Students will be able to identify examples of student multiple intelligences and develop a plan for how this might affect instruction in the classroom.Students will be

able to describe appropriate procedures for implementing cooperative learning into classroom activities.

3. FBI fingerprinting and background clearance must be completed.

## Undergraduate Courses

### 100-Level Courses

C S 100 : Fundamentals of Computing and Information. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Computing, information structures, programming principles, Internet, World Wide Web, text, spreadsheets, data representations for images, sound and video.

NOTE: For nonmajors.

**Course Outcomes**

- Describe how digital information is represented and how that representation affects the way information can be manipulated and stored. This includes lists, tables, records, and trees.
- Manipulate digital information using algorithms written in a programming language. This includes an ability to understand and write assignment statements, loops, conditionals, and functions.
- Explain how the Internet and web pages work. This includes demonstrating skills in web-content creation.
- Explain the purpose of an operating system and the basics of how it carries out its tasks.
- Identify computer hardware components, and, describe how those components work and interact.

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

C S 199R : Academic Internship. (.5-3:0:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Internships or cooperative education experiences with organizations outside BYU.

**Course Outcomes**

- Students will develop familiarity with industrial software development and analysis.

### 200-Level Courses

C S 224 : Introduction to Computer Systems. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 142; or instructor's consent.

DESCRIPTION: How a computer works, from hardware to high-level programming. Logic circuits, computer instructions, assembly language, binary arithmetic, C programming, program translation, data structures, and algorithm analysis.

**Course Outcomes**

There are no course outcomes available

C S 235 : Data Structures and Algorithms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 142

DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

**Course Outcomes**

- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- Write programs that require ~500 lines of code.

C S 236 : Discrete Structures. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: C S 235

DESCRIPTION: Introduction to grammars and parsing; predicate and propositional logic; proof techniques; sets, functions, relations, relational data model; graphs and graph algorithms.

**Course Outcomes**

- Understand and be conversant with basic discrete mathematical structures (finite state machines, regular expressions, grammars, propositional calculus, proof techniques, predicate calculus, sets, relations, functions, graphs).Write complex programs by using mathematical concepts as the basis for solving programming problems (finite state machines for lexical analysis; grammars for parsing; propositional and predicate calculus for logic programming; sets and algebras for relational databases; algebras, graphs, and topological sorting for optimizing datalog query processing).Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.Design a solution for a programming problem and justify the design as one that is maintainable and extendable by other programmers who understand and are conversant with discrete mathematical structures.
- Demonstrate ability to build large programs by writing and integrating code from a diverse spectrum of program components.

C S 240 : Advanced Programming Concepts. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 236

DESCRIPTION: Advanced software development with an object-oriented focus. Design, implementation, and testing of several large programs in a Java and Linux environment using current technologies.

**Course Outcomes**

- a. Use coding, testing, and debugging strategies. b. Follow basic object-oriented design concepts.
- Write programs in an Object Oriented programming language using inheritance, polymorphism and class hierarchies.
- Use the Linux programming environment to execute basic commands and to run the compiler, linker, debugger, memory checker, and profiler.
- Demonstrate the aptitude and work ethic necessary to succeed in computer science.

C S 252 : Introduction to Computational and Probabilistic Models in Computer Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 236 or concurrent enrollment.

DESCRIPTION: Computational models: regular grammars, context-free grammars, Turing machines. Complexity theory: big-O and complexity classes P, NP, NP-complete, and f-NP. Probabilistic Models: Introduction to probability theory, random variables, joint distributions, Bayes rules, Bayes networks.

**Course Outcomes**

- Understand the three computing paradigms (DFAs, PDA, Turing Machine) and their language-based equivalents (regular languages,context-free languages, computable algorithms).
- Categorize problems into one of the existing paradigms.
- Understand the difference between and limitations of paradigms.
- Understand the difference between computable (decidable) and practically computable (tractable).
- Design and justify solutions to problems of decidability and tractability.

C S 256 : Designing the User Experience. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 142

DESCRIPTION: Studio-critique style course on user experience design. Contextual inquiry to identify user needs. Iterative solution design using sketching and storyboards. Human perception and visual design principles. Rapid prototyping and evaluation of proposed solutions.

**Course Outcomes**

There are no course outcomes available

### 300-Level Courses

C S 301R : Topics in Computer Science. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: Instructor's consent.

DESCRIPTION: Undergraduate-level topics as announced.

**Course Outcomes**

There are no course outcomes available

C S 312 : Algorithm Design and Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240 & C S 252

DESCRIPTION: A study of the design and analysis of algorithms as solutions to problems, including dynamic programming, linear programming, greedy algorithms, divide-and-conquer algorithms, graph algorithms, and intelligent search algorithms.

**Course Outcomes**

There are no course outcomes available

C S 330 : Concepts of Programming Languages. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Principles and concepts characterizing high-level computer programming languages, process and data abstration, encapsulation, inheritance, functional programming, logic programming, scanners, and parsers.

**Course Outcomes**

- Learn the vocabulary of programming language design, syntax, and semantics
- Be able to write programs using non-imperative language paradigms.

C S 340 : Software Design and Testing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240

DESCRIPTION: Principles of software design, design patterns, design representation, refactoring. Principles of software quality assurance and testing. Development and testing tools.

**Course Outcomes**

- Articulate the principles of effective software design.
- Know when and how to apply various design patterns.
- Demonstrate how to effectively document and communicate software designs.
- Understand what quality assurance is, know how to build quality into software using review techniques, and demonstrate quality evaluation through testing.
- Use a variety of software development tools, including IDEs, automation tools, static analysis tools, source code control systems, unit testing tools, and documentation tools.
- Work effectively in a group to produce quality software using 1-5 above.

C S 345 : Operating Systems Design. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 224 & C S 240

DESCRIPTION: Principles and concepts of operating systems design and the implementation of an operating system.

**Course Outcomes**

- Describe the basic components of an operating system and their role in implementations for general purpose, real-time, and embedded applications.
- Define the concepts of processes, threads, asynchronous signals and competitive system resource allocation.
- Show how a shell works.
- Explain what multi-tasking is and outline standard scheduling algorithms for multi-tasking.
- Discuss mutual exclusion principles and their use in concurrent programming, including semaphore construction and resource allocation.
- Give an overview of system memory management.
- Explain how file systems are implemented.
- Discuss the features and strengths of various contemporary operating systems.
- Implement a functional, pre-emptive, multi-tasking operating system written in C, including a shell, scheduler, file manager, memory manager, and synchronization components.

C S 355 : Interactive Graphics and Image Processing. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Introduces basic concepts of computer graphics, user interfaces and image processing. Includes homogenous coordinate transforms, image transforms, event driven programming and color models. Extends Model-View-Controller architecture.

**Course Outcomes**

There are no course outcomes available

C S 360 : Internet Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Internet application programming, including sockets, threads, CGI, database, e-commerce, Web services.

**Course Outcomes**

- Design and implement a variety of client-server and web applications.
- Analyze the performance of a web server, write convincingly to support your conclusions and give an oral report to describe your findings.
- Implement a web server using processes, semaphores, threads, sockets and signals.
- Use a set of web programming languages to implement an application.
- Use security to protect their web application.

**400-Level Courses**

C S 401R : Topics in Computer Science. (1-3:ARR:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: Instructor's consent.

DESCRIPTION: Undergraduate level subjects as announced before each semester.

**Course Outcomes**

- Students will learn about a topic in Computer Science not covered in the traditional courses.

C S 404 : Ethics and Computers in Society. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240 & ENGL 316

DESCRIPTION: Societal impact of computer technology, the computer scientist's place in society, ethical issues. Reading, discussion, and writing seminar.

**Course Outcomes**

- Articulate connections between the gospel of Jesus Christ and their professional life.
- Analyze, write about, and discuss issues and ethical problems related to computing and the application of evolving technologies in society.
- Appreciate the history of computing as a means for students to sharpen their sense of their own future.
- Students will understand the need for continuing education in their careers.

C S 405 : Creating and Managing a Software Business. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department

PREREQUISITE: C S 240 & ENGL 316

DESCRIPTION: Entrepreneurship, idea/opportunity generation, strategic planning, legal organization, product development, marketing/sales, customer support, fund raising, and effective management.

**Course Outcomes**

- Students will write a business plan for a company they are proposing.

C S 412 : Linear Programming and Convex Optimization. (3:3:0)

PREREQUISITE: C S 312 & MATH 313; or instructor's consent.

DESCRIPTION: Optimization, problem formulation, and solution algorithms, including simplex and interior point methods. Applications from control, data mining, finance, game theory, learning, network flow, operations research, and statistical estimation.

**Course Outcomes**

- Develop a fluency in the mathematical foundations needed to pose optimization problems, including an appreciation for the role of convexity in characterizing solvable problems.
- Develop a fluency with the Simplex Method as a solution technique to Linear Programming problems. Understand how it exploits the linear nature of the problem to yield good average-case performance while failing to be efficient in the worst-case.
- Understand the meaning of weak and strong duality and their role in the design and verification of algorithmic solutions to optimization problems.
- Be able to characterize how to perturb the data of an existing problem so that its solution remains optimal for the new, perturbed problem.
- Develop a fluency with interior point methods for solving Linear Programming problems and understand how these solutions may be extended to solve nonlinear, convex optimization problems.
- Explore the role of Linear and Convex Programming in a variety of applications, including 1) Finance, 2) Game Theory, 3) Regression, and 4) Computer Networking.

C S 418 : Bioinformatics. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department; Spring Contact Department; Summer Contact Department

PREREQUISITE: C S 312

DESCRIPTION: Computational methods for analyzing biological systems. Dynamic programming, Markov models, Neural Networks, and Bayesian analysis are used to predict secondary structure, tertiary structure, and active sites for drug docking given molecular DNA sequence data.

**Course Outcomes**

- Graph Theoretical algorithms, Regulatory Inference
- Large Memory Genomic Mapping, SNP calling
- Develop new research ideas and communicate them effectively

C S 428 : Software Engineering. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: C S 340

DESCRIPTION: Analysis, design, implementation, and testing of significant software systems.

**Course Outcomes**

- Demonstrate the ability to work in a group on a significant project
- Demonstrate practices that result in quality software
- Demonstrate an understanding of how ethics impact software development

C S 431 : Algorithmic Languages and Compilers. (3:3:0)

PREREQUISITE: C S 340

DESCRIPTION: Formal description of algorithmic languages and techniques used in their compilation: semantics, ambiguities, procedures, replication, iteration, recursion.

**Course Outcomes**

- Implement a fully functional compiler for a subset of the Java language that targets an embedded microprocess.
- Apply patterns and common data structures to compiler constructrion including tree traversal, graph algorithms, and proof systems.
- Students are able to synthesis algorithms and techniques from compiler constructor to other problem domains.
- Students have a sound mental model of how an abstract high level language is systematically transformed into a low-level machine langauge or byte code. Students are able to use that understanding to write better application code.

C S 450 : Introduction to Digital Signal and Image Processing. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 312 & C S 355 & MATH 313

RECOMMENDED: Stat 121.

DESCRIPTION: One- and two-dimensional signal-processing fundamentals, including sampling, noise, transforms, filtering, enhancement, and compression. Hands-on experimentation with speech, music, still images, and full-motion video.

**Course Outcomes**

- Understand and apply the following:Sampling and quantization of image informationCamera properties adn the acquisition of imagesMathematics of image-space transformationsFourier transforms adn filtering

C S 452 : Database Modeling Concepts. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: C S 240

DESCRIPTION: Database models: relational, deductive, object-oriented. Integrity constraints, query languages, database design.

**Course Outcomes**

- Be able to use a variety of commercial query languages (SQL, XQuery, SPARQL), both stand-alone and embeded in high-level programming languages. Know how relational algebra and relational calculus provide a basis for commercial query languages.
- Understand performance issues and optimization strategies. This includes query rewriting, secondary storage characteristics, and access strategies.
- Be able to design and develop relational database applications. This includes conceptual modeling and normalization theory.
- Be familiar with some of the current challenges facing database professionals.

C S 453 : Fundamentals of Information Retrieval. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: C S 240

DESCRIPTION: Concepts and terminology of information retrieval (IR) systems. Design methodologies and issues. Fundamental IR models examined: Boolean, Vector Space, Probabilistic models, and evaluation strategies.

**Course Outcomes**

There are no course outcomes available

C S 455 : Computer Graphics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: C S 355 & MATH 313

DESCRIPTION: Interactive computer graphics systems programming and architecture.

**Course Outcomes**

- Students will be proficient in basic computer graphics algorithms such as modeling, trnasformations and rendering.Students will design and code solutions to several programming problems in graphics using algorithms and data structures.In addition, sututents will use these techniques to program a large semester project.

C S 456 : Introduction to User Interface Software. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: C S 256 & C S 355; or C S 301R & C S 355

DESCRIPTION: Introduction to software architectures and techniques for graphical user interfaces. Input devices, windowing systems, event-driven programming, interactive geometry.

**Course Outcomes**

- Understand and apply the following:Multiple mechanisms for receiving information from people and presenting information to people.The geometry of basic shapes and how to use the geometry to solve basic interaction problems.Algorithms for user interface layout management.Models for specifying and evaluating user input dialogs.

C S 460 : Computer Communications and Networking. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: C S 360

DESCRIPTION: Introduction to data communications and computer networking. Communications fundamentals, computer networks, software, architecture, telecommunications, regulation, standards.

**Course Outcomes**

- Understand the principles of the Internet architecture
- Understand how the Internet works, from the transport layer down to the physical layer
- Gain hands-on experience with implementing and simulating transport, routing, and MAC protocols, leading to a deeper understanding of these critical Internet components
- Be capable of reading and understanding research papers in the area of computer networking
- Demonstrate the ability to effectively conduct, describe and report on an experimental research project in the area of computer networking

C S 462 : Large-Scale Distributed System Design. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: C S 340 & C S 360

DESCRIPTION: Designing and implementing client-server enterprise applications. Web servers, application servers, database connectivity, remote procedure calls, transactions, messaging, directory, naming services, threads, security, data formats.

**Course Outcomes**

- Enterprise Web application development

C S 465 : Computer Security. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 360 or concurrent enrollment.

DESCRIPTION: Introduction to computer security fundamentals: confidentiality, integrity, authentication, and access control. Secret key and public key cryptography, network security protocols, viruses, and fire walls.

**Course Outcomes**

- Implement a cryptographic algorithm from a standards specification.
- Demonstrate how attackers compromise real-world systems, and then show how to prevent these attacks.

C S 470 : Introduction to Artificial Intelligence. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: C S 312 & MATH 313 & STAT 121; or instructor's consent.

DESCRIPTION: Introduction to core areas of artifical intelligence; intelligent agents, problem solving and search, knowledge-based systems and inference, planning, uncertainty, learning, and perception.

**Course Outcomes**

- from business, medicine, robotics, gaming, and machine learning
- Does it require basic control?Does it involve uncertain reasoning?Does it have a simple goal, sophisticated utility, or multiple attributes?Does it require sequential choice or planning?How may decision makers are involved?
- What is the internal representation?What performance criteria are relevant?What is the nature of the environment?What are the actuators?What are the sensors?What are the agent's utilities?How is uncertainty represented?
- Uninformed, informed, constraint-satisfaction, hill-climbing, and stochastic (e.g., genetic algorithms) searchMarkov provesses, Bayes rule, Bayes nets, Hidden Markov Models, Grid Filters, and Kalman FiltersExpected utility theoryMulti-attribute utility theorySequential choice under uncertainty: value and policy iterationMinimax solutions from game theory: alpha-beta pruning
- Determine whether your solution is correctExpress the quality of your solutionValue the need to communicate your solution to others

C S 478 : Tools for Machine Learning and Data Mining. (3:3:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: C S 312 & MATH 313 & STAT 121

DESCRIPTION: Machine learning and data mining models and other mechanisms allowing computers to learn and find knowledge from data.

**Course Outcomes**

- Take your computer to school
- You will be able to recognize when machine learning and data mining tools are applicable.
- You will be able to plan and execute successful machine learning and data mining projects, including selecting an adequate process for your specific task and avoiding the main data mining pitfalls.

C S 479 : Natural Language Processing. (3:3:0)

PREREQUISITE: C S 312 & STAT 121

RECOMMENDED: Ling 330.

DESCRIPTION: Introduction to natural language processing (NLP). Relevant problems include web search, speech recognition, machine translation, spam filtering, text classification, question answering, spell checking. Building real tools, understanding human language, applying techniques beyond NLP.

**Course Outcomes**

- The student will grow in confidence in their mathematical and statistical abilities. In particular, the student will understand the models, methods, and algorithms of statistical Natural Language Processing (NLP) for common NLP tasks, such as speech recognition, machine translation, spam filtering, text classification, and spell checking.The student will implement probabilistic models in code, estimate parameters for such models, and run meaningful experiments to validate such models.
- The student will apply core computer science concepts and algorithms, such as dynamic programming.
- The student will gain understanding of linguistic phenomena and will explore the linguistic features relevant to each NLP task.
- The student will apply the methods to new NLP problems and will be able to apply the methods to problems outside NLP.
- The student will be familiar with some of the NLP literature and will read and suggest improvements to published work. The student will see where opportunities for research await and prepare to conduct research in NLP or related fields.The student will also analyze experimental results and write reports for each course project to develop scientific writing skills.

C S 484 : Parallel Processing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: C S 360

DESCRIPTION: Theoretical and practical study of parallel processing including multi-core, fine-grained, and clustered architectures, parallel programming languages, and parallel algorithms.

**Course Outcomes**

- Use multiple processors to solve a problem faster
- Understand the metrics that are used to evaluate effective applications.

C S 486 : Verification and Validation. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: C S 312

DESCRIPTION: Foundational topics in verification and validation; the application of logic to building correct systems. Covers logics to formally specify properties of systems, verifications of basic systems, and advanced topics in formal verification for complex systems.

**Course Outcomes**

There are no course outcomes available

C S 498R : Undergraduate Special Projects. (1-3:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 240

DESCRIPTION: Students identify an interesting problem in computer science and solve it with the aid of faculty members.

**Course Outcomes**

There are no course outcomes available

## 500-Level Graduate Courses (available to advanced undergraduates)

C S 500 : (C S-Chem-Geol-Math-MthEd-Phscs-Stat) Business Career Essentials in Science and Math. (1.5:1.5:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Learn the basics of project management and understand why this is important to business success
- Learn how to read and understand a business financial accounting statement (both internal and external)
- Understand the different levels of technology readiness and the process of moving a project through these levels to completion
- Learn the basics of effective business presentations and writing

C S 501R : Advanced Topics in Computer Science. (1-3:ARR:0)

PREREQUISITE: Instructor's consent.

DESCRIPTION: Advanced undergraduate- and graduate-level subjects as announced before each semester.

**Course Outcomes**

- Students will learn a topic in Computer Science not covered by the regular curriculum.

C S 513 : Robust Control. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Math 313 or equivalent.

RECOMMENDED: C S 312 and 412; Math 334; or equivalents.

DESCRIPTION: Introduction to the analysis and design of feedback systems guaranteed to perform well in spite of model uncertainty.

**Course Outcomes**

There are no course outcomes available

C S 557 : Computer-Aided Geometric Design. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: C S 240, Math 343; or equivalents.

DESCRIPTION: Free-form curves and surfaces; mathematical theory and algorithms. Bezier and B-spline curves and surfaces, subdivision surfaces, T-splines, free-form deformation, and intersection algorithms. Several programming projects.

**Course Outcomes**

- Understand the theory, properties, and algorithms for Bezier curves: de Casteljau algorithm, degree elevation, hodographs, curve intersection algorithms, convex hull property, variationa diminishing property, rational Bezier curves, explicit Bezier curves.
- Understand polar form, the de Boor algorithm, the Boehm algorithm, knot intervals.
- Understand tensor product Bezier and B-Spline surfaces, including the de Casteljau algorithm, partial derivatives, parametric continuity, tesselation.

## Graduate Courses

For 600- and 700-level courses, see the BYU 2014–2015 Graduate Catalog.

## Undergraduate Courses

### 100-Level Courses

CSANM 150 : Introduction to Three-Dimensional Computer Graphics. (1.5:1.5:1.5)

WHEN TAUGHT: Spring

DESCRIPTION: Fundamentals of modeling, texturing, lighting, and rendering used in exploring principles and elements of three-dimensional design.

**Course Outcomes**

There are no course outcomes available

### 200-Level Courses

CSANM 250 : Intermediate Three-Dimensional Computer Graphics. (2:4:0)

WHEN TAUGHT: Fall

DESCRIPTION: Fundaments of building three-dimensional computer models and setting up model rigs for mobility.

NOTE: Course changed to CSAnm 250 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 252 : Introduction to Three-Dimensional Animation. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: CSANM 250

DESCRIPTION: Foundational principles and techniques of three-dimensional animation, including timing and pacing, character setup, and dynamics.

NOTE: Course changed to CSAnm 252 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 258 : Scripting for Animation. (3:3:3)

WHEN TAUGHT: Spring

DESCRIPTION: Developing basic scripting skills to procedurally build intricate systems of models, rigs, and animation. Students learn how to reduce manual hours and efficiently create simple to complex effects.

NOTE: Course changed to CSAnm 258 beginning Fall 2014.

**Course Outcomes**

There are no course outcomes available

### 300-Level Courses

CSANM 350 : Character Animation in 3D. (3:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: CSANM 252

DESCRIPTION: Three-dimensional character animation applying traditional animation principles.

NOTE: Course changed to CSAnm 350 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 351R : Lighting for Three-Dimensional Graphics. (3:3:3)

WHEN TAUGHT: Winter

DESCRIPTION: Developing lighting and color, and the compiling of the various elements for final images for use in three-dimensional applications.

NOTE: Course changed to CSAnm 351R beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 354 : Shader Programming. (3:3:3)

WHEN TAUGHT: Fall

DESCRIPTION: Shading and rendering techniques for the attainment of desired visual effects: use of shading languages for the realization of both photorealistic and non-photorealistic imaging.

NOTE: Course changed to CSAnm 354 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 355 : Photography for Animation. (3:3:3)

WHEN TAUGHT: Spring

DESCRIPTION: Layout, references, camera technology and terminology, application of composition, lighting, and core art skills emphasized.

NOTE: Course changed to CSAnm 355 beginning Fall 2012.

**Course Outcomes**

No outcomes are available at this time.

**400-Level Courses**

CSANM 450R : Advanced Senior Film Production 1. (3:3:3)

WHEN TAUGHT: Fall

DESCRIPTION: In-depth experiences creating computer animations and visual effects. Senior film front-end development and introduction to full animation production.

NOTE: Course changed to CSAnm 450 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 452R : Advanced Senior Film Production 2. (3:3:3)

WHEN TAUGHT: Winter

DESCRIPTION: Portfolio development based on advanced animation/design projects. Senior film production and post production.

NOTE: Course changed to CSAnm 452R beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 453R : Special Topics in Advanced Graphics. (3:3:3)

WHEN TAUGHT: Fall

DESCRIPTION: Researching new technologies in animation and visualization. Topics might include real-time technologies, three-dimensional data acquisition, performance capture, or new entertainment platforms.

NOTE: Course changed to CSAnm 453R beginning Fall 2012.

**Course Outcomes**

No outcomes are available at this time.

CSANM 454 : Advanced Shading. (3:3:3)

WHEN TAUGHT: Fall

DESCRIPTION: Advanced shading, rendering, and lighting methods for creating virtual scenes that emphasize story and innovatively meet an art director's vision through traditional and procedural methods.

NOTE: Course changed to CSAnm 454 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 458 : Three-Dimensional Visual Effects. (3:3:3)

DESCRIPTION: Exploring procedural and three-dimensional animation methods to create realistic special effects. Applying a large

spectrum of animation principles to integrate their effects aesthetically and convincingly into a live action or animated environment.

NOTE: Course changed to CSAnm 458 beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 459R : Advanced Animation Technology. (1.5:1.5:1.5)

WHEN TAUGHT: Winter

DESCRIPTION: Meeting a variety of complex visual production demands by combining technical ingenuity with artistic creativity. Crafting directable tools with artistic flexibility and using them to create visuals for the production's story.

NOTE: Course changed to CSAnm 459R beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 494R : Special Problems in Animation. (.5-3:Arr:Arr)

PREREQUISITE: Instructor's consent.

DESCRIPTION: Individual study in area of special interest.

NOTE: Course changed to CSAnm 494R beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

CSANM 497R : BFA Final Project. (1-3:Arr:Arr)

PREREQUISITE: BFA advisor's consent.

DESCRIPTION: Advanced individual project with minimum guidance, showing high degree of competence within chosen major.

NOTE: Course changed to CSAnm 497R beginning Fall 2012.

**Course Outcomes**

There are no course outcomes available

## Professors

Adams, R. Brent
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BUS, University of Utah, 1982
MFA, University of Utah, 1992

Barrett, William A.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BA, University of Utah, 1974
PhD, University of Utah, 1978

Burton, Robert Preece
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BA, University of Utah, 1969
PhD, University of Utah, 1973

Clement, Mark Joel
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1985
MS, Brigham Young University, 1989
PhD, Oregon State University, 1994

Egbert, Parris
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Utah State University, 1986
MS, University of Illinois, Urbana, 1990
PhD, University of Illinois, Urbana, 1992

Embley, David W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BA, University of Utah, 1970
MS, University of Utah, 1972
PhD, University of Illinois, 1976

Goodrich, Michael A.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1992
MS, Brigham Young University, 1995
PhD, Brigham Young University, 1996

Martinez, Tony Ramon

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1982
MS, University of California, Los Angeles, 1983
PhD, University of California, Los Angeles, 1986

Morse, Bryan Stuart
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1986
MA, Brigham Young University, 1990
PhD, University of North Carolina, Chapel Hill, 1995

Olsen, Dan Reed
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1976
MS, Brigham Young University, 1978
PhD, University of Pennsylvania, 1981

Sederberg, Thomas W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1975
MS, Brigham Young University, 1977
PhD, Purdue University, Lafayette, 1983

Snell, Quinn O.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Utah State University, 1992
MS, Utah State University, 1993
PhD, Iowa State University, 1997

Ventura, Dan Aaron
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1992
MS, Brigham Young University, 1995
PhD, Brigham Young University, 1998

Woodfield, Scott N.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1975
MS, Brigham Young University, 1978
PhD, Purdue University, Lafayette, 1980

## Associate Professors

Giraud-Carrier, Christophe Gerard
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1991
MS, Brigham Young University, 1993
PhD, Brigham Young University, 1994

Jones, Michael D.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1995
MS, Brigham Young University, 1997

PhD, University of Utah, 2001

Knutson, Charles Douglas

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1988
MS, Brigham Young University, 1994
PhD, Oregon State University, 1998

Mercer, Eric G.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, University of Utah, 1996
MS, University of Utah, 1999
PhD, University of Utah, 2002

Ng, Yiu-Kai Dennis

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1982
MS, Brigham Young University, 1984
PhD, Kansas State University, 1991

Ringger, Eric Karl

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1992
MS, University of Rochester, 1994
PhD, University of Rochester, 2000

Seamons, Kent Eldon

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1986
PhD, University of Illinois, Urbana, 1996

Seppi, Kevin Darrell

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1982
MS, Santa Clara University, 1987
PhD, University of Texas, Austin, 1990

Warnick, Sean C.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Arizona State University, 1993
MS, Massachusetts Institute of Technology, 1995
PhD, Massachusetts Institute of Technology, 2003

Zappala, Daniel Mark Alexander

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Professor
**DEGREES:** BS, Stanford University, 1990
PhD, University of Southern California, 1997

## Assistant Professor

McCarthy, Jay

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Assistant Professor
**DEGREES:** BS, University of Massachusetts, Lowell,

PhD, Brown University,

## Teaching Professors

Barker, Joseph Cory

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Teaching Professor
**DEGREES:** BS, Brigham Young University, 1982
PhD, Brigham Young University, 1994

Rodham, Kenneth J.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Teaching Professor
**DEGREES:** BS, Brigham Young University, 1990
MS, Brigham Young University, 1992
PhD, Brigham Young University, 1995

## Associate Teaching Professor

Roper, Paul Ross

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Associate Teaching Professor
**DEGREES:** BS, Brigham Young University, 1976
MS, Brigham Young University, 1979

## Instructor

Holladay, Seth R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Computer Science
**RANK:** Instructor
**DEGREES:** BS, Brigham Young University, 2004
MS, Brigham Young University, 2007

# Geological Sciences

John H. McBride, Chair
S-389 ESC, (801) 422-3918

College of Physical and Mathematical Sciences Advisement Center
N-181 ESC, (801) 422-2674
1112 TMCB, (801) 422-4214

## Admission to Degree Program

All degree programs in the Department of Geological Sciences are open enrollment. However, special limitations apply for teaching majors.

## The Discipline

Geological sciences are aimed at understanding the Earth's origin and development and the natural processes that have operated upon it and within it from the time of formation of the solar system. With the development of remote sensing technology and the exploration of the solar system by spacecraft, geological sciences have become increasingly important for understanding not only the Earth but the Moon, other planets and their moons, and small bodies that orbit the Sun.

Understanding the dynamic processes of Earth and other planets is relevant to many societal needs, such as assessment and forecasting of natural hazards, environmental change, and discovery of energy and mineral resources. Some of the diverse disciplines that can be studied in this department include general geology, plate tectonics, volcanology, geochemistry, geophysics, paleontology, environmental geology, petroleum geology, hydrogeology, paleoclimatology, and planetary geology.

## Career Opportunities

Graduates have the opportunity to work both outdoors and in the laboratory, pursuing careers in energy, mineral, and water resources or in environmental evaluation with industry, government, or consulting firms. The substantial preparation in basic sciences and mathematics also leads to a broad spectrum of teaching opportunities. Some scholarship money is available for those who pursue a geological sciences degree as a prelaw track. The most marketable terminal degree in geological sciences is the Master of Science. Starting salaries for this degree are often very competitive with those of other disciplines.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

## Undergraduate Programs and Degrees

**BS in Earth and Space Science Education** (Program Outcomes)
**BS in Geology** (Program Outcomes)
**Environmental Geology Emphasis (optional)** (Program Outcomes)

**Minor in Geology**
**Minor in Geology Teaching**

Students should see their college advisement center for help or information concerning the undergraduate programs.

## Graduate Programs and Degrees

MS Geology

For more information see the BYU 2014–2015 Graduate Catalog.

## Global Geology Program

Each year the department provides opportunities for advanced undergraduates and graduate students to examine rocks and geological processes at some premier localities around the world. These one- to two-week field trips allow students to do mentored research projects and develop field expertise rarely available to undergraduate students. Programs that are run every four to five years include:

1. Active volcanism of Hawaii.
2. Carbonate formation in Florida and the Bahamas.
3. Tectonism and plutonism in the northeast Appalachians.

Trips to more distant localities (e.g., Italy, Alaska, India, England) have been interspersed with these recurring trips. Scholarships are available that greatly reduce the cost to students.

*This major is designed to prepare students to teach in public schools. In order to graduate with this major, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.*

## Program Requirements | View MAP | View Program Outcomes

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following:

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 112 : Historical Geology. (4:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 111

DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

**Course Outcomes**

- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere,

and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological, depositional, tectonic, and climatic events in the context of the geological timescale.
- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

GEOL 210 : Field Studies. (3:0:9)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111 & GEOL 112

DESCRIPTION: Procedures in observing, collecting, and recording field data concerning properties of rock units.

NOTE: Contact Geological Sciences Department before April 15 for dates of upcoming August trip.

**Course Outcomes**

- Learn how to take accurate and complete field notes.Learn how to use a compass to measure strike and dip on outcrops in the field.Learn how to read topographic and geologic maps and relate the map to what you see in the field.
- Review rocks and minerals learned in earlier courses and be able to accurately identify them in the field.Understand the relationships between igneous rocks and minerals and magmatic processes.Understand the relationships between metamorphic rocks and minerals and the processes that formed them.Understand the significance of sedimentary rocks in understanding depositional systems and regional tectonics.
- Learn the basics of making a geologic map.Learn how to interpret the geology on a map to draw a geologic cross-section.Write up the results of data you collected along with your interpretation in a clear, consise manner.
- Become detailed observers of field geology
- Understand the formative processes of the geology of Utah's National Parks including Zion NP, Bryce Canyon NP, and Capitol Reef NP.
- Develop an understanding of the interelationships of stratigraphy, structural geology, and surficial processes on landscape evolution.

GEOL 411 : Geomorphology and Remote Sensing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330

DESCRIPTION: Interpretive analysis of landforms and their geologic significance. Use of aerial/satellite images of Earth and other planets, topographic/bathymetric maps, multi-wavelength image data. Field trips.

**Course Outcomes**

- Understand the relationships between landscapes and the processes that created them
- Develop an ability to read and interpret geology and geomorphology from topographic maps, air photos, and satellite data
- Become comfortable with quantitative analyses of landforms and geomorphic processes
- Acquire an appreciation for the unique and complex way the landscapes of Earth and the planets evolved to their present-day morphologies

3. Complete two hours (four enrollments) of the following:

GEOL 491R : Geology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar on various geologic topics by guest speakers.

**Course Outcomes**

- Demonstrate familiarity with diverse topics in geological sciences addressed by a series of seminar speakers.
- Interact with geoscientists that have specialized in disciplines of interests of like-minded students.

4. Complete three courses from the following:

GEOL 100 : Dinosaurs. (3:1:2)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Hands-on examination of vertebrate fossils -- especially dinosaurs. For nonscience majors. Field trips.

**Course Outcomes**

- Be able participate in meaningful discussions on the relationships of science and religion.
- Confidently explain the relationships between deep time, the diversity of life, and plate tectonics.
- Be able to explain how science works via examples from geology and paleontology.
- Have an infectious sense of awe and wonder for today's biotic and abiotic realms as part of an ever-changing Earth.
- Using cladistic methods be able to explain the basic phylogenetic relationships within Dinosauria, including birds.

GEOL 109 : Geology of the Planets. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Origins and distinctive histories of the planets in our solar system as revealed by study of their surface features.

NOTE: For nonscience and science majors.

**Course Outcomes**

- Learn to piece together new information, draw inferences, reexamine older geological theories based only on our terrestrial experience, and formulate new theories about the way planets behave and how they originated. Finally, you may be able to propose novel ways to test these new ideas.
- Be able to reconstruct the histories of the planets, their moons, and other bodies.
- Understand the fundamental principles of geology by studying the development of the planetsin the solar system.
- Gain a greater appreciation of how our own planet functions and why it is uniquely suited for life.

GEOL 230 : Geological Communications. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111

DESCRIPTION: Introduction to writing within the discipline and designing and creating publishable geologic maps and illustrations. Tools include ArcGIS, Adobe Illustrator, and Photoshop. Student portfolio initiated.

**Course Outcomes**

- Become proficient in using the leading software tools including ArcGIS, Illustrator, Photoshop, Acrobat, and MS Excel.
- Design and create publishable geologic maps,illustrations, figures, and tables from geologic data and models.
- Analyze geologic data through basic statistical techniques and simple numerical models.
- Write concise, scientific descriptions of geologic data and illustrations.

GEOL 351 : Mineralogy. (4:2:4)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112; Chem 105 or 111 or concurrent enrollment.

DESCRIPTION: Principles of crystallography and crystal chemistry. Physical, chemical, and crystallographic properties of minerals.

**Course Outcomes**

- Demonstrate understanding of the fundamental ideas that govern the arrangement of atoms into a crystalline structure (chemical bonding, atomic size, coordination number, polymerization of polyhedra, bond strength and bond valence, stability, etc.)
- Demonstrate a basic understanding of atomic level symmetry. Enumerate and describe the crystal systems in terms of both symmetry and unit-cell metrics, recognize symmetry elements in well-formed natural crystals, and determine crystal classes of such crystals.
- Describe the applications and limitations of important instrumental/analytical methods used in mineralogy.
- Identify specimens of the 60-70 most common minerals at least 70% of the time.
- Demonstrate an understanding of the mechanisms and implications of various mineralogical phenomena, including solid solution, exsolution, polymorphism, atomic ordering, polytypism, color, and twinning.
- Discuss the interrelationships among crystallography, composition, and the physical properties of minerals.
- Demonstrate the ability to apply principles learned to minerals not specifically encountered in the course.
- Use computer software for reduction of mineralogical data and be able to discuss its limitations.
- Demonstrate the ability to work in teams to collect and analyze mineralogical data and incorporate it into an original, high quality research paper on an assigned subject of mineralogical significance.

GEOL 352 : Petrology. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 210 & GEOL 351 & CHEM 105; or GEOL 210 & GEOL 351 & CHEM 111

DESCRIPTION: Compositions, fabrics, and field relations of igneous and metamorphic rocks; behavior of rock-forming systems. Field trips.

**Course Outcomes**

- Explain how magmas form and differentiate at divergent and convergent plate boundaries and at mantle plumes.
- Describe how metamorphic rocks form and their relationships to global tectonics.
- Identify the minerals and rock types using hand samples and thin sections of the major rock types.

GEOL 370 : Sedimentology and Stratigraphy. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 112 & GEOL 210 & GEOL 230

DESCRIPTION: Erosion; sediment entrainment, transport, and deposition; depositional systems and facies analysis; principles of stratigraphy. Field trips.

**Course Outcomes**

- Apply problem solving, critical thinking, and communication skills relative to depositional models and interpreting the stratigraphic record.
- Understand depositional systems, facies relationships, and introductory aspects of sequence stratigraphy.
- Discuss processes and forces that weather, transport, and deposit sedimentary grains under both sunaqueous and subarial conditions.
- Observe and describe sedimentary rocks objectectively. Gain the ability to communicate using appropriate scientific vocabulary.

GEOL 375 : Structural Geology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 230 & MATH 113; Phscs 105 or concurrent enrollment.

DESCRIPTION: Geometric, kinematic, and dynamic analysis of tectonic features. Practical exercises. Using aerial photos. Field trips.

**Course Outcomes**

- My goal is for each of student to learn to become a part of the ongoing conversation about how Earth's crust deforms. This means learning the language of structural geology and using it to share the discoveries they make for themselves. Discoveries in structural geology come through applying best-fit kinematic and dynamic models to geometric reconstructions of observed geological structure. The discovery is complete when they are communicated effectively through writing, illustrations and oral presentation.
- 1. Identify and measure brittle Structure (extensional and shear fractures, fault-related folds)2. Identify and measure ductile Structure (flow folds, cleavage, foliation and rock fabrics)
- 1. Acquire reliable measurements of the geometry of structures with a compass2. Present and manipulate data using stereographic projection3. Interpret stress and kinematic histories from structural measurements4. Infer geometry of subsurface and missing parts of structures from measurements in order to construct a viable geologic cross-section.
- 1. Identify and interpret sense-of-shear indicators associated with both brittle and ductile structures in the field2. Reconstruct the deformation path of a structural feature or deformed region
- 1. Derive the normal and shear stress components for rock failure from lab data.2. Use these results to derive the constituitive equations for deformation3. Quantify the contribution of each deformational mechanism in a region.
- 1. Measure the orientation, slip rate and direction of the Wasatch Fault2. Combine these measurements with GPS and EDM results on strain accumulation rates3. Determine the most likely location and magnitude of the next large earthquake along the Wasatch Fault.
- 1. Use structural data to predict the best location to drill for water, oil and gas.2. Use structural data to predict the location of mineral resources3. Use structural data to predict the environmental impact of toxic waste disposal

GEOL 405 : Applied Mathematics in the Geological Sciences. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 113 & GEOL 111

RECOMMENDED: Geol 230.

DESCRIPTION: Provides a broad survey of mathematical methods that are relevant for geological problems. Focuses on casting geological problems in mathematical terms and solving them. Strong emphasis on setting up equations and on the quality of written solutions.

**Course Outcomes**

No outcomes are available at this time.

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

**Course Outcomes**

- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

GEOL 440 : Solid Earth Geophysics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106 & MATH 112 & GEOL 111

DESCRIPTION: Physics of the earth, including earthquake seismology. Gravity, seismic, magnetic, electrical, and heat flow properties and methods.

**Course Outcomes**

- Understand the fundamental principles of plate motions, seismic waves, gravity, magnetics, heat flow, and mantle convection
- Develop the ability to analyze processes in Earth's interior and on its surface through use of mathematics and problem solving
- Become comfortable with reading scientific papers, analyzing their content, and writing summaries of your analyses
- Acquire an appreciation for the unique and complex processes in Earth's interior and the resulting surface manifestations and implications for development of life

GEOL 445 : Geochemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 106 & CHEM 107 & GEOL 352; or CHEM 112 & GEOL 352
DESCRIPTION: Applying elementary chemical principles to understand geologic processes and materials.

**Course Outcomes**

- Students will mathematically describe geochemical fractionation, mixing, kinetics, transport, and equilibrium.
- Students will solve geochemical problems both analytically and using computer software.
- Students will improve their scientific writing skills.

GEOL 452 : Petrography to Petrogenesis. (3:2:1)

WHEN TAUGHT: Winter Odd Yrs.
PREREQUISITE: GEOL 351 & GEOL 352
DESCRIPTION: Principles of optical mineralogy and their application to the identification of minerals in thin section Petrographic analysis and its relation to rock-forming processes in igneous, metamorphic, and sedimentary rocks.

**Course Outcomes**

There are no course outcomes available

GEOL 460 : Economic and Resource Geology. (3:2:2)

WHEN TAUGHT: Winter
PREREQUISITE: GEOL 352
DESCRIPTION: Nature and genesis of metallic and non-metallic mineral deposits, including laboratory study of economic minerals. Field trips.

**Course Outcomes**

- Identify important ore-forming minerals, textures, and structures in hand sample and in the field.
- Compare and contrast the principal ore-forming processes: magmatic, hydrothermal, and sedimentary.
- Use observed characteristics of an ore deposit to develop a genetic model for its origin.
- Develop an exploration strategy for an ore deposit based on a genetic model.

GEOL 476 : Introduction to Seismic Interpretation. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: GEOL 370 & GEOL 375
DESCRIPTION: Fundamental techniques; analyzing seismic reflection data. Reviewing fundamentals of seismic trace and geologic implications. Basic mapping of subsurface structure and stratigraphy.

**Course Outcomes**

- Understand and able to explain what a reflection wavelet is. i.e. polarity, phase and amplitude
- Able to identify and interpret, using colored pencils, seismic reflectors on a set of intersecting 2D seismic lines.
- Uses geologic knowledge to infer structure and stratigraphy from seismic reflection data.
- Develop three-dimensional thinking skills.
- Able to coherently and concisely prepare and present technical presentations from:1) Scientific articles2) Seismic interpretation and research
- Generation of a hand-drawn time-structure map using the interpretation generated in Learning Outcome "2D Interpretation"
- Learning of 3D interpretation software. Able to interpret 3D data and generate digital time-structure map.

GEOL 480 : Paleontology. (3:3:2)

WHEN TAUGHT: Fall
PREREQUISITE: GEOL 112
DESCRIPTION: Distribution, morphology, paleoecology, evolution, and stratigraphic significance of organisms in the geologic record. Field trips.

**Course Outcomes**

- Demonstrate understanding of the nature of fossils and types of fossilization that turn organic remains into fossils.
- Be able to explain the incompleteness of the fossil record and the taphonomic processes that affect fossils between death and burial and burial and discovery.
- Be able to recognize the major groups of invertebrate fossils on the basis of their morphology and be able to identify key index fossils to the species level.
- Demonstrate understanding of the uses of fossils in solving geological problems: paleoenvironments, relative age, paleocology.
- Understand the role of fossils in demonstrating the patterns of evolution through time.

5. Complete one of the following options:

**Either**

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements;

reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

**Course Outcomes**

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

**Course Outcomes**

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

**Or**

CHEM 111 : Principles of Chemistry. (4:3:3)

OFFERED: Honors also.

WHEN TAUGHT: Fall

PREREQUISITE: Math 110 or equivalent.

RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.

DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.

NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

**Course Outcomes**

CHEM 112 : Principles of Chemistry. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 111 or Chem 105 or equivalent.

DESCRIPTION: Continuation of Chem 111.

NOTE: Tutorial included.

**Course Outcomes**

- Students will be able to use thermodynamic principles and their application to physical and chemical equilibria to calculate entropic and enthalpic contributions to physical changes and reactions and predict equilibria given entropic and enthalpic changes.
- Students will be able to apply acid-base theory, including interactions of strong and weak acids and bases, to determination of pH values of solutions, calculating buffering capacity and performance of acid-base titrations. They will be able to use structural features of molecules to estimate acid and base strength.
- Students will demonstrate an understanding of electrochemistry in designing simple electrodes and will use reduction/oxidation potentials to characterize electrodes.
- Students will be able to apply transition state theory to reaction kinetics. Students will be able to model mathematically rates of multiple reaction types.
- Students will be able to apply the periodic nature of the elements to classify elements and identify the compositions of inorganic salts.

6. Complete the following:

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.
NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

PHIL 423 : History and Philosophy of Science. (3:3:0)

PREREQUISITE: Phy S 100 or instructor's consent; Phil 300.
DESCRIPTION: Scientific explanation, concepts, and models. Philosophical assumptions and criteria for theory selection, as exemplified by historical development of basic ideas in science.

**Course Outcomes**

- Know major concepts, theories, figures, texts, and issues in the history and philosophy of Western science from antiquity to the contemporary era.
- Read and critically discuss figures and texts in the philosophy of science.
- Practice philosophical analysis and argumentation orally and in writing; write a complex, nuanced, and well-referenced research paper on the philosophy of science.
- Be able to explain the practice and value of philosophy of science.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

**Course Outcomes**

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

**Course Outcomes**

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

**Course Outcomes**

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

**Course Outcomes**

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 127 : Descriptive Astronomy. (3:3:1)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

PHSCS 137 : Severe and Hazardous Weather. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: Phy S 100 or high school/college physics.
DESCRIPTION: Nonmathematical introduction to meteorology. Atmospheric structure and dynamic behavior, focusing on short-term violent weather and longer-term hazards: drought, floods, heat waves, cold waves, and climate change, including human environmental impact.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

7. Complete the Professional Education Component:
   - Complete the following:

CPSE 402 : Educating Students with Disabilities in Secondary Classrooms. (2:2:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or comparable major course; FBI fingerprint background clearance.
DESCRIPTION: Issues, policies, and methods in teaching secondary students with disabilities in general education classrooms. Lab.

**Course Outcomes**

- Demonstrate sensitivity to individuals with disabilities.

- Describe the effects of cultural, ethnic, and language diversity on the education of individuals with disabilities
- Describe the steps in the Individual Education Program (IEP) process, including Individualized Transition Plans for students aged 14-22.
- Use research-supported methods for academic instruction of individuals with disabilities including explicit instruction, learning strategies, task analysis, and active participation.
- Describe models and strategies of consultation and collaboration including co-planning and co-teaching.
- Define special education and describe the legal structure of services for individuals with disabilities, including the Individuals with Disabilities Education Act (IDEA).
- Develop a personal philosophy of special education which includes an understanding of the implications of Least Restrictive Environment as defined in IDEA.
- Demonstrate knowledge of basic classroom management theories and an understanding of teacher attitudes and behaviors that influence behavior of individuals with exceptional learning needs.
- Describe the characteristics and educational implications of students with high and low incidence disabilities
- Demonstrate ability to identify and prioritize areas of the general curriculum and provide accommodations for individuals with exceptional learning needs

IP&T 286 : Instructional Technology in Teaching. (1:1:ARR)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Using instructional design, visual design, and differentiated staffing principles along with multimedia authoring systems, telecommunication, and other computer-based tools in the development of educational applications for secondary education settings.

**Course Outcomes**

There are no course outcomes available

PHY S 276 : Exploration of Teaching. (4:4:0)

PREREQUISITE: FBI fingerprint and background clearance.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching secondary students.

**Course Outcomes**

- Students will become familiar with the four moral dimensions of education as outlined by the McKay School of Education
- Engage in the exploration of teachers and students in the public school to come to a conclusion if teaching physical science is a career path you want to pursue.
- Complete PIBS, CDS, Field Experience Demographic forms in Mackay School date collection program.

PHY S 377 : Teaching Methods and Instruction. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHY S 276

DESCRIPTION: Developing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Using Science Standards as a quide develop Assessments, Lesson Plans, Outlines, and all parts of a unit of science instruction.
- Inquiry, Constructivism, Lab, Activities, Projects and other methods to engage students in learning. These teaching methods will be modeled and practiced by the students.
- Students will complete Transition 2 level toward teaching license.

PHY S 378 : Practicum in Secondary Education. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Concurrent enrollment in Phy S 377.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- 30 practicum hours where you teach a unit of instruction with guidance public school mentor.

SC ED 353 : Multicultural Education. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Designing and adapting instruction for diverse learners; collaborating with families, cultures, and communities in promoting and sustaining learning.

**Course Outcomes**

- Students will examine and understand the various dimensions of cultural identity, including one's own, and apply this knowledge to their thinking and behavio through a process of reflection.

- Acknowledge the dynamics of culture and diversity in school success and teachers' teaching. This includes recognizing and overcoming deficit thinking.
- Identify culturally and linguistically relevant pedagogy and use theoretically grounded principles to analyze why it is effective for many different types of learners.
- Interpret the historical context of diversity, discrimination, and language policies and evaluate how they impact current school practices.
- Recognize and acknowledge racism, discrimination and other forms of inquity and privilege in themselves, in others, and within institutions.
- Recognize and use a personal moral spiritual framework along with principles and concepts of social science to guide educational accomplishments for diverse learners.

SC ED 375 : Adolescent Development and Classroom Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or HIth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B; or concurrent enrollment.

DESCRIPTION: Analysis of education practice and the relationship between theories and research on development, classroom management, education and the practice of teaching. Focus on adolescent development and an introduction to classroom management.

**Course Outcomes**

There are no course outcomes available

**Note:** FBI fingerprint and background clearance must be completed before enrollment in Phy S 276.

- Complete 12 hours from one of the following:

SC ED 476R : Secondary Student-Teaching. (1-12:ARR:ARR)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.

DESCRIPTION: Capstone, field-based, semester-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

- Students will put into practice the theories they have learned in content and pedagogy courses including planning lessons, assessing students of all abilities and cultural backgrounds, using a variety of instructional strategies, and collaborating with other teachers and with the community.

: Secondary Student Teaching - Art.

**Course Outcomes**

: Secondary Student Teaching - Foreign Language. (12:ARR:ARR)

**Course Outcomes**

: Secondary Student Teaching - French.

**Course Outcomes**

: Secondary Student Teaching - Mathematics.

**Course Outcomes**

: Secondary Student Teaching - Physical Science.

**Course Outcomes**

: Secondary Student Teaching - Social Science.

**Course Outcomes**

: Secondary Student Teaching - Spanish.

**Course Outcomes**

SC ED 496R : Academic Internship: Secondary Education. (12:ARR:ARR)

WHEN TAUGHT: Fall

PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.

DESCRIPTION: Capstone, field-based, year-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

- Students will demonstrate that they can teach, manage, and assess content area knowledge and skills in the 7-12 classroom.
- Foster relationships with school colleagues, parents, and the larger community.

: Academic Internship: Social Sciences.

**Course Outcomes**

: Academic Internship: English.

**Course Outcomes**

: Academic Internship: Mathematics.

**Course Outcomes**

: Academic Internship: Biological Sciences.

**Course Outcomes**

: Academic Internship: Physical Sciences.

**Course Outcomes**

*Hours include courses that may fulfill university core requirements.

# BS in Geology (74–75 hours*)

Show All Course Descriptions
Hide All Course Descriptions

This basic degree in geology prepares graduates for professional employment in industry or government or for advanced studies in geology, business, or law.

## Program Requirements | View MAP | View Program Outcomes

1. No D credit is allowed in major courses.
2. Complete the following:

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 112 : Historical Geology. (4:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 111

DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

**Course Outcomes**

- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere, and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological, depositional, tectonic, and climatic events in the context of the geological timescale.

- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

GEOL 210 : Field Studies. (3:0:9)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111 & GEOL 112

DESCRIPTION: Procedures in observing, collecting, and recording field data concerning properties of rock units.

NOTE: Contact Geological Sciences Department before April 15 for dates of upcoming August trip.

**Course Outcomes**

- Learn how to take accurate and complete field notes.Learn how to use a compass to measure strike and dip on outcrops in the field.Learn how to read topographic and geologic maps and relate the map to what you see in the field.
- Review rocks and minerals learned in earlier courses and be able to accurately identify them in the field.Understand the relationships between igneous rocks and minerals and magmatic processes.Understand the relationships between metamorphic rocks and minerals and the processes that formed them.Understand the significance of sedimentary rocks in understanding depositional systems and regional tectonics.
- Learn the basics of making a geologic map.Learn how to interpret the geology on a map to draw a geologic cross-section.Write up the results of data you collected along with your interpretation in a clear, consise manner.
- Become detailed observers of field geology
- Understand the formative processes of the geology of Utah's National Parks including Zion NP, Bryce Canyon NP, and Capitol Reef NP.
- Develop an understanding of the interelationships of stratigraphy, structural geology, and surficial processes on landscape evolution.

GEOL 230 : Geological Communications. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111

DESCRIPTION: Introduction to writing within the discipline and designing and creating publishable geologic maps and illustrations. Tools include ArcGIS, Adobe Illustrator, and Photoshop. Student portfolio initiated.

**Course Outcomes**

- Become proficient in using the leading software tools including ArcGIS, Illustrator, Photoshop, Acrobat, and MS Excel.
- Design and create publishable geologic maps,illustrations, figures, and tables from geologic data and models.
- Analyze geologic data through basic statistical techniques and simple numerical models.
- Write concise, scientific descriptions of geologic data and illustrations.

GEOL 351 : Mineralogy. (4:2:4)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112; Chem 105 or 111 or concurrent enrollment.

DESCRIPTION: Principles of crystallography and crystal chemistry. Physical, chemical, and crystallographic properties of minerals.

**Course Outcomes**

- Demonstrate understanding of the fundamental ideas that govern the arrangement of atoms into a crystalline structure (chemical bonding, atomic size, coordination number, polymerization of polyhedra, bond strength and bond valence, stability, etc.)
- Demonstrate a basic understanding of atomic level symmetry. Enumerate and describe the crystal systems in terms of both symmetry and unit-cell metrics, recognize symmetry elements in well-formed natural crystals, and determine crystal classes of such crystals.
- Describe the applications and limitations of important instrumental/analytical methods used in mineralogy.
- Identify specimens of the 60-70 most common minerals at least 70% of the time.
- Demonstrate an understanding of the mechanisms and implications of various mineralogical phenomena, including solid solution, exsolution, polymorphism, atomic ordering, polytypism, color, and twinning.
- Discuss the interrelationships among crystallography, composition, and the physical properties of minerals.
- Demonstrate the ability to apply principles learned to minerals not specifically encountered in the course.
- Use computer software for reduction of mineralogical data and be able to discuss its limitations.
- Demonstrate the ability to work in teams to collect and analyze mineralogical data and incorporate it into an original, high quality research paper on an assigned subject of mineralogical significance.

GEOL 352 : Petrology. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 210 & GEOL 351 & CHEM 105; or GEOL 210 & GEOL 351 & CHEM 111

DESCRIPTION: Compositions, fabrics, and field relations of igneous and metamorphic rocks; behavior of rock-forming systems. Field trips.

**Course Outcomes**

- Explain how magmas form and differentiate at divergent and convergent plate boundaries and at mantle plumes.
- Describe how metamorphic rocks form and their relationships to global tectonics.
- Identify the minerals and rock types using hand samples and thin sections of the major rock types.

GEOL 370 : Sedimentology and Stratigraphy. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 112 & GEOL 210 & GEOL 230

DESCRIPTION: Erosion; sediment entrainment, transport, and deposition; depositional systems and facies analysis; principles of stratigraphy. Field trips.

**Course Outcomes**

- Apply problem solving, critical thinking, and communication skills relative to depositional models and interpreting the stratigraphic record.
- Understand depositional systems, facies relationships, and introductory aspects of sequence stratigraphy.
- Discuss processes and forces that weather, transport, and deposit sedimentary grains under both sunaqueous and subarial conditions.
- Observe and describe sedimentary rocks objectectively. Gain the ability to communicate using appropriate scientific vocabulary.

GEOL 375 : Structural Geology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 230 & MATH 113; Phscs 105 or concurrent enrollment.

DESCRIPTION: Geometric, kinematic, and dynamic analysis of tectonic features. Practical exercises. Using aerial photos. Field trips.

**Course Outcomes**

- My goal is for each of student to learn to become a part of the ongoing conversation about how Earth's crust deforms. This means learning the language of structural geology and using it to share the discoveries they make for themselves. Discoveries in structural geology come through applying best-fit kinematic and dynamic models to geometric reconstructions of observed geological structure. The discovery is complete when they are communicated effectively through writing, illustrations and oral presentation.
- 1. Identify and measure brittle Structure (extensional and shear fractures, fault-related folds)2. Identify and measure ductile Structure (flow folds, cleavage, foliation and rock fabrics)
- 1. Acquire reliable measurements of the geometry of structures with a compass2. Present and manipulate data using stereographic projection3. Interpret stress and kinematic histories from structural measurements4. Infer geometry of subsurface and missing parts of structures from measurements in order to construct a viable geologic cross-section.
- 1. Identify and interpret sense-of-shear indicators associated with both brittle and ductile structures in the field2. Reconstruct the deformation path of a structural feature or deformed region
- 1. Derive the normal and shear stress components for rock failure from lab data.2. Use these results to derive the constituitive equations for deformation3. Quantify the contribution of each deformational mechanism in a region.
- 1. Measure the orientation, slip rate and direction of the Wasatch Fault2. Combine these measurements with GPS and EDM results on strain accumulation rates3. Determine the most likely location and magnitude of the next large earthquake along the Wasatch Fault.
- 1. Use structural data to predict the best location to drill for water, oil and gas.2. Use structural data to predict the location of mineral resources3. Use structural data to predict the environmental impact of toxic waste disposal

GEOL 410 : Geological Field Methods. (6:0:46)

WHEN TAUGHT: Spring

PREREQUISITE: GEOL 352 & GEOL 370 & GEOL 375; Phscs 105 or concurrent enrollment.

DESCRIPTION: Methods used to observe, collect, and interpret field data in geologic and environmental investigations.

NOTE: Fee.

**Course Outcomes**

- Acquire the fundamental skills to successfully produce a geologic map.Learn how to effectively collect information on structure, stratigraphy, and rock units in the field.Construct a geologic map and cross-section from data you have collected in the field.

3. Complete 2 hours (four enrollments) of the following:

GEOL 491R : Geology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar on various geologic topics by guest speakers.

**Course Outcomes**

- Demonstrate familiarity with diverse topics in geological sciences addressed by a series of seminar speakers.
- Interact with geoscientists that have specialized in disciplines of interests of like-minded students.

4. Complete four courses from the following:

GEOL 405 : Applied Mathematics in the Geological Sciences. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 113 & GEOL 111

RECOMMENDED: Geol 230.

DESCRIPTION: Provides a broad survey of mathematical methods that are relevant for geological problems.

Focuses on casting geological problems in mathematical terms and solving them. Strong emphasis on setting up equations and on the quality of written solutions.

**Course Outcomes**

No outcomes are available at this time.

GEOL 411 : Geomorphology and Remote Sensing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330

DESCRIPTION: Interpretive analysis of landforms and their geologic significance. Use of aerial/satellite images of Earth and other planets, topographic/bathymetric maps, multi-wavelength image data. Field trips.

**Course Outcomes**

- Understand the relationships between landscapes and the processes that created them
- Develop an ability to read and interpret geology and geomorphology from topographic maps, air photos, and satellite data
- Become comfortable with quantitative analyses of landforms and geomorphic processes
- Acquire an appreciation for the unique and complex way the landscapes of Earth and the planets evolved to their present-day morphologies

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

**Course Outcomes**

- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

GEOL 440 : Solid Earth Geophysics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106 & MATH 112 & GEOL 111

DESCRIPTION: Physics of the earth, including earthquake seismology. Gravity, seismic, magnetic, electrical, and heat flow properties and methods.

**Course Outcomes**

- Understand the fundamental principles of plate motions, seismic waves, gravity, magnetics, heat flow, and mantle convection
- Develop the ability to analyze processes in Earth's interior and on its surface through use of mathematics and problem solving
- Become comfortable with reading scientific papers, analyzing their content, and writing summaries of your analyses
- Acquire an appreciation for the unique and complex processes in Earth's interior and the resulting surface manifestations and implications for development of life

GEOL 445 : Geochemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 106 & CHEM 107 & GEOL 352; or CHEM 112 & GEOL 352

DESCRIPTION: Applying elementary chemical principles to understand geologic processes and materials.

**Course Outcomes**

- Students will mathematically describe geochemical fractionation, mixing, kinetics, transport, and equilibrium.
- Students will solve geochemical problems both analytically and using computer software.
- Students will improve their scientific writing skills.

GEOL 452 : Petrography to Petrogenesis. (3:2:1)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: GEOL 351 & GEOL 352

DESCRIPTION: Principles of optical mineralogy and their application to the identification of minerals in thin section Petrographic analysis and its relation to rock-forming processes in igneous, metamorphic, and sedimentary rocks.

**Course Outcomes**

There are no course outcomes available

GEOL 460 : Economic and Resource Geology. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 352

DESCRIPTION: Nature and genesis of metallic and non-metallic mineral deposits, including laboratory study of economic minerals. Field trips.

**Course Outcomes**

- Identify important ore-forming minerals, textures, and structures in hand sample and in the field.
- Compare and contrast the principal ore-forming processes: magmatic, hydrothermal, and sedimentary.
- Use observed characteristics of an ore deposit to develop a genetic model for its origin.
- Develop an exploration strategy for an ore deposit based on a genetic model.

GEOL 476 : Introduction to Seismic Interpretation. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 370 & GEOL 375

DESCRIPTION: Fundamental techniques; analyzing seismic reflection data. Reviewing fundamentals of seismic trace and geologic implications. Basic mapping of subsurface structure and stratigraphy.

**Course Outcomes**

- Understand and able to explain what a reflection wavelet is. i.e. polarity, phase and amplitude
- Able to identify and interpret, using colored pencils, seismic reflectors on a set of intersecting 2D seismic lines.
- Uses geologic knowledge to infer structure and stratigraphy from seismic reflection data.
- Develop three-dimensional thinking skills.
- Able to coherently and concisely prepare and present technical presentations from:1) Scientific articles2) Seismic interpretation and research
- Generation of a hand-drawn time-structure map using the interpretation generated in Learning Outcome "2D Interpretation"
- Learning of 3D interpretation software. Able to interpret 3D data and generate digital time-structure map.

GEOL 480 : Paleontology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 112

DESCRIPTION: Distribution, morphology, paleoecology, evolution, and stratigraphic significance of organisms in the geologic record. Field trips.

**Course Outcomes**

- Demonstrate understanding of the nature of fossils and types of fossilization that turn organic remains into fossils.
- Be able to explain the incompleteness of the fossil record and the taphonomic processes that affect fossils between death and burial and burial and discovery.
- Be able to recognize the major groups of invertebrate fossils on the basis of their morphology and be able to identify key index fossils to the species level.
- Demonstrate understanding of the uses of fossils in solving geological problems: paleoenvironments, relative age, paleocology.
- Understand the role of fossils in demonstrating the patterns of evolution through time.

5. Complete one of the following options:

**Either**

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN Fall; Winter; Summer

TAUGHT:
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.
NOTE: Three lectures and one recitation section per week.

**Course Outcomes**

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.
DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.
NOTE: Required for most students needing one year of general chemistry.

**Course Outcomes**

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

**Or**

CHEM 111 : Principles of Chemistry. (4:3:3)
OFFERED: Honors also.
WHEN TAUGHT: Fall
PREREQUISITE: Math 110 or equivalent.
RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.
DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.
NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

**Course Outcomes**

CHEM 112 : Principles of Chemistry. (3:3:2)
WHEN TAUGHT: Winter
PREREQUISITE: Chem 111 or Chem 105 or equivalent.
DESCRIPTION: Continuation of Chem 111.
NOTE: Tutorial included.

**Course Outcomes**

- Students will be able to use thermodynamic principles and their application to physical and chemical equilibria to calculate entropic and enthalpic contributions to physical changes and reactions and predict equilibria given entropic and enthalpic changes.
- Students will be able to apply acid-base theory, including interactions of strong and weak acids and bases, to determination of pH values of solutions, calculating buffering capacity and performance of acid-base titrations. They will be able to use structural features of molecules to estimate acid and base strength.
- Students will demonstrate an understanding of electrochemistry in designing simple electrodes and will use reduction/oxidation potentials to characterize electrodes.
- Students will be able to apply transition state theory to reaction kinetics. Students will be able to model mathematically rates of multiple reaction types.
- Students will be able to apply the periodic nature of the elements to classify elements and identify the compositions of inorganic salts.

6. Complete the following:
ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.
NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 112 : Calculus 1. (4:5:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

PHSCS 105 : General Physics 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

**Course Outcomes**

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

**Course Outcomes**

There are no course outcomes available

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

7. All students are required to construct a portfolio of their work that includes samples of their writing, scientific data analysis, and presentations--both oral and written. The portfolio will be evaluated during the semester before graduation.

*Hours include courses that may fulfill university core requirements.

## Show all Geological Sciences (Geol) Courses

**College of Physical and Mathematical Sciences Home**

**Geological Sciences Department Home**

**Majors**

- BS in Earth and Space Science Education
- BS in Geology

Emphasis (optional):

- Environmental Geology

**Minors**

- Geology
- Geology Teaching

**Course Information**

**Faculty**

# BS in Geology: Environmental Geology Emphasis (74–75 hours*)

Show All Course Descriptions
Hide All Course Descriptions

Increasing concern with environmental degradation and natural geologic hazards has led to a demand for geologists who are both well grounded in the fundamentals of the science of geology and specifically prepared to address environmental problems. This degree prepares students for careers either in the environmental services industry or government or for advanced studies.

## Program Requirements | View MAP | View Program Outcomes

1. No D credit is allowed in major courses.
2. Complete the following:

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 112 : Historical Geology. (4:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 111

DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

**Course Outcomes**

- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere, and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological,

depositional, tectonic, and climatic events in the context of the geological timescale.
- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

GEOL 210 : Field Studies. (3:0:9)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111 & GEOL 112

DESCRIPTION: Procedures in observing, collecting, and recording field data concerning properties of rock units.

NOTE: Contact Geological Sciences Department before April 15 for dates of upcoming August trip.

**Course Outcomes**

- Learn how to take accurate and complete field notes.Learn how to use a compass to measure strike and dip on outcrops in the field.Learn how to read topographic and geologic maps and relate the map to what you see in the field.
- Review rocks and minerals learned in earlier courses and be able to accurately identify them in the field.Understand the relationships between igneous rocks and minerals and magmatic processes.Understand the relationships between metamorphic rocks and minerals and the processes that formed them.Understand the significance of sedimentary rocks in understanding depositional systems and regional tectonics.
- Learn the basics of making a geologic map.Learn how to interpret the geology on a map to draw a geologic cross-section.Write up the results of data you collected along with your interpretation in a clear, consise manner.
- Become detailed observers of field geology
- Understand the formative processes of the geology of Utah's National Parks including Zion NP, Bryce Canyon NP, and Capitol Reef NP.
- Develop an understanding of the interelationships of stratigraphy, structural geology, and surficial processes on landscape evolution.

GEOL 230 : Geological Communications. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111

DESCRIPTION: Introduction to writing within the discipline and designing and creating publishable geologic maps and illustrations. Tools include ArcGIS, Adobe Illustrator, and Photoshop. Student portfolio initiated.

**Course Outcomes**

- Become proficient in using the leading software tools including ArcGIS, Illustrator, Photoshop, Acrobat, and MS Excel.
- Design and create publishable geologic maps,illustrations, figures, and tables from geologic data and models.
- Analyze geologic data through basic statistical techniques and simple numerical models.
- Write concise, scientific descriptions of geologic data and illustrations.

GEOL 351 : Mineralogy. (4:2:4)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112; Chem 105 or 111 or concurrent enrollment.

DESCRIPTION: Principles of crystallography and crystal chemistry. Physical, chemical, and crystallographic properties of minerals.

**Course Outcomes**

- Demonstrate understanding of the fundamental ideas that govern the arrangement of atoms into a crystalline structure (chemical bonding, atomic size, coordination number, polymerization of polyhedra, bond strength and bond valence, stability, etc.)
- Demonstrate a basic understanding of atomic level symmetry. Enumerate and describe the crystal systems in terms of both symmetry and unit-cell metrics, recognize symmetry elements in well-formed natural crystals, and determine crystal classes of such crystals.
- Describe the applications and limitations of important instrumental/analytical methods used in mineralogy.
- Identify specimens of the 60-70 most common minerals at least 70% of the time.
- Demonstrate an understanding of the mechanisms and implications of various mineralogical phenomena, including solid solution, exsolution, polymorphism, atomic ordering, polytypism, color, and twinning.
- Discuss the interrelationships among crystallography, composition, and the physical properties of minerals.
- Demonstrate the ability to apply principles learned to minerals not specifically encountered in the course.
- Use computer software for reduction of mineralogical data and be able to discuss its limitations.
- Demonstrate the ability to work in teams to collect and analyze mineralogical data and incorporate it into an original, high quality research paper on an assigned subject of mineralogical significance.

GEOL 352 : Petrology. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 210 & GEOL 351 & CHEM 105; or GEOL 210 & GEOL 351 & CHEM 111

DESCRIPTION: Compositions, fabrics, and field relations of igneous and metamorphic rocks; behavior of rock-forming systems. Field trips.

**Course Outcomes**

- Explain how magmas form and differentiate at divergent and convergent plate boundaries and at mantle plumes.
- Describe how metamorphic rocks form and their relationships to global tectonics.

- Identify the minerals and rock types using hand samples and thin sections of the major rock types.

GEOL 370 : Sedimentology and Stratigraphy. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 112 & GEOL 210 & GEOL 230

DESCRIPTION: Erosion; sediment entrainment, transport, and deposition; depositional systems and facies analysis; principles of stratigraphy. Field trips.

**Course Outcomes**

- Apply problem solving, critical thinking, and communication skills relative to depositional models and interpreting the stratigraphic record.
- Understand depositional systems, facies relationships, and introductory aspects of sequence stratigraphy.
- Discuss processes and forces that weather, transport, and deposit sedimentary grains under both sunaqueous and subarial conditions.
- Observe and describe sedimentary rocks objectectively. Gain the ability to communicate using appropriate scientific vocabulary.

GEOL 375 : Structural Geology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 230 & MATH 113; Phscs 105 or concurrent enrollment.

DESCRIPTION: Geometric, kinematic, and dynamic analysis of tectonic features. Practical exercises. Using aerial photos. Field trips.

**Course Outcomes**

- My goal is for each of student to learn to become a part of the ongoing conversation about how Earth's crust deforms. This means learning the language of structural geology and using it to share the discoveries they make for themselves. Discoveries in structural geology come through applying best-fit kinematic and dynamic models to geometric reconstructions of observed geological structure. The discovery is complete when they are communicated effectively through writing, illustrations and oral presentation.
- 1. Identify and measure brittle Structure (extensional and shear fractures, fault-related folds)2. Identify and measure ductile Structure (flow folds, cleavage, foliation and rock fabrics)
- 1. Acquire reliable measurements of the geometry of structures with a compass2. Present and manipulate data using stereographic projection3. Interpret stress and kinematic histories from structural measurements4. Infer geometry of subsurface and missing parts of structures from measurements in order to construct a viable geologic cross-section.
- 1. Identify and interpret sense-of-shear indicators associated with both brittle and ductile structures in the field2. Reconstruct the deformation path of a structural feature or deformed region
- 1. Derive the normal and shear stress components for rock failure from lab data.2. Use these results to derive the constituitive equations for deformation3. Quantify the contribution of each deformational mechanism in a region.
- 1. Measure the orientation, slip rate and direction of the Wasatch Fault2. Combine these measurements with GPS and EDM results on strain accumulation rates3. Determine the most likely location and magnitude of the next large earthquake along the Wasatch Fault.
- 1. Use structural data to predict the best location to drill for water, oil and gas.2. Use structural data to predict the location of mineral resources3. Use structural data to predict the environmental impact of toxic waste disposal

GEOL 410 : Geological Field Methods. (6:0:46)

WHEN TAUGHT: Spring

PREREQUISITE: GEOL 352 & GEOL 370 & GEOL 375; Phscs 105 or concurrent enrollment.

DESCRIPTION: Methods used to observe, collect, and interpret field data in geologic and environmental investigations.

NOTE: Fee.

**Course Outcomes**

- Acquire the fundamental skills to successfully produce a geologic map.Learn how to effectively collect information on structure, stratigraphy, and rock units in the field.Construct a geologic map and cross-section from data you have collected in the field.

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

**Course Outcomes**

- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

GEOL 445 : Geochemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 106 & CHEM 107 & GEOL 352; or CHEM 112 & GEOL 352

DESCRIPTION: Applying elementary chemical principles to understand geologic processes and materials.

**Course Outcomes**

- Students will mathematically describe geochemical fractionation, mixing, kinetics, transport, and equilibrium.
- Students will solve geochemical problems both analytically and using computer software.
- Students will improve their scientific writing skills.

3. Complete two hours (four enrollments) of the following:

GEOL 491R : Geology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar on various geologic topics by guest speakers.

**Course Outcomes**

- Demonstrate familiarity with diverse topics in geological sciences addressed by a series of seminar speakers.
- Interact with geoscientists that have specialized in disciplines of interests of like-minded students.

4. Complete two courses from the following:

CE EN 351 : Environmental Engineering. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 105

DESCRIPTION: Environmental concerns, problems, and evaluation methodology; pollution control and engineering management approaches; material balance and separations; reactor design.

**Course Outcomes**

- Be able to setup and solve material balance calculations for environmental engineering problems.
- Understand zero, first, and second order reactions equations and be able to solve simple problems using these concepts. Understand half-life and doubling time and how it applies to reactor design.
- Understand and solve problems using mixed-batch, plug-flow, and completely mixed mixing models. Solve simple design problems for mix-batch, plug-flow, and completly mixed flow reactors.
- Understand and solve simple problems of energy balance. This will include units of meausre, conversion, energy equivalance, and power production.
- Understand the concept of an ecosystem. This includes material and energy flows.
- Understand basic water quality measures: dissolved oxygen, oxygen demand, solids, nitrogen, and bacteria measurements. Be introduced to water quality standards for drinking water, effluents, and surface waters.
- Understand and solve basic engineering problems related to water treatment processes including softening, coagulation and floculation, settling, filtration, and disinfection.
- Understand and solve basic engineering problems related to waste water treatment. This will include understanding the basic unit operations: preliminary and primary treatment, secondary treatment, tertiary treatment, and sludge treatment and disposal. Understand and be able to solve basic engineering problems related to activated sludge systems, including reactor design and solids separation.
- Understand the basic processes and issues related to air quality, this includes major air pollutants, sources of air pollution, and air quality standards.
- Understand the basic issues and regulations related to hazardous and radioactive waste. This includes legal definitions and approaches.

GEOL 405 : Applied Mathematics in the Geological Sciences. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 113 & GEOL 111

RECOMMENDED: Geol 230.

DESCRIPTION: Provides a broad survey of mathematical methods that are relevant for geological problems. Focuses on casting geological problems in mathematical terms and solving them. Strong emphasis on setting up equations and on the quality of written solutions.

**Course Outcomes**

No outcomes are available at this time.

GEOL 411 : Geomorphology and Remote Sensing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330

DESCRIPTION: Interpretive analysis of landforms and their geologic significance. Use of aerial/satellite images of Earth and other planets, topographic/bathymetric maps, multi-wavelength image data. Field trips.

**Course Outcomes**

- Understand the relationships between landscapes and the processes that created them
- Develop an ability to read and interpret geology and geomorphology from topographic maps, air photos, and satellite data
- Become comfortable with quantitative analyses of landforms and geomorphic processes

- Acquire an appreciation for the unique and complex way the landscapes of Earth and the planets evolved to their present-day morphologies

GEOL 440 : Solid Earth Geophysics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106 & MATH 112 & GEOL 111

DESCRIPTION: Physics of the earth, including earthquake seismology. Gravity, seismic, magnetic, electrical, and heat flow properties and methods.

**Course Outcomes**

- Understand the fundamental principles of plate motions, seismic waves, gravity, magnetics, heat flow, and mantle convection
- Develop the ability to analyze processes in Earth's interior and on its surface through use of mathematics and problem solving
- Become comfortable with reading scientific papers, analyzing their content, and writing summaries of your analyses
- Acquire an appreciation for the unique and complex processes in Earth's interior and the resulting surface manifestations and implications for development of life

GEOL 535 : Contaminant Hydrogeology. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Geology 435 or equivalent.

DESCRIPTION: Principles, tools, and applications used to solve heavy metal, organic, and radionuclide groundwater contamination problems. Topics include regulations, mass transport, multiphase flow, transformation, retardation, and attenuation.

**Course Outcomes**

- 1. Learn the fundamental processes by which contaminants are transported in groundwater, including: diffusion, advection, and dispersion.2. Understand process that delay or limit contaminant transport, including: sorption, reaction, decay (chemical and radioactive), and colloid transport.3. Learn the fundamentals of tranport in the vadose zone, as well as multiphase flow.4. Appreciate the processes involved in the transport of inorganic (including radionuclides) and organic compounds.5. Understand the fundamental principles of ground water monitoring, site characterization, and remediation, including the major federal laws that govern such actions.

PWS 303 : Soils Conservation and Resources. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

RECOMMENDED: Geol 111.

DESCRIPTION: Taxonomy of world soils; conservation and management of agricultural, wildland, wetland, and urban soils.

**Course Outcomes**

- Understand soil physics, chemistry, taxonomy, and water movement to maintain natural resources.
- Apply soil conservation practices and principles to regions sensitive to soil degradation.
- Understand the history, development, and terminology associated with USDA Soil Taxonomy and be familiar with other soil taxonomic systems. Recognize soil orders and suborders from the physical and chemical characteristics of the soil

5. Complete the following:

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

**Course Outcomes**

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

**Course Outcomes**

There are no course outcomes available

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

6. Complete one of the following options:

**Either**

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

**Course Outcomes**

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

**Course Outcomes**

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

**Or**

CHEM 111 : Principles of Chemistry. (4:3:3)

OFFERED: Honors also.

WHEN TAUGHT: Fall

PREREQUISITE: Math 110 or equivalent.

RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.

DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.

NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.

- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

**Course Outcomes**

CHEM 112 : Principles of Chemistry. (3:3:2)

WHEN TAUGHT: Winter
PREREQUISITE: Chem 111 or Chem 105 or equivalent.
DESCRIPTION: Continuation of Chem 111.
NOTE: Tutorial included.

**Course Outcomes**

- Students will be able to use thermodynamic principles and their application to physical and chemical equilibria to calculate entropic and enthalpic contributions to physical changes and reactions and predict equilibria given entropic and enthalpic changes.
- Students will be able to apply acid-base theory, including interactions of strong and weak acids and bases, to determination of pH values of solutions, calculating buffering capacity and performance of acid-base titrations. They will be able to use structural features of molecules to estimate acid and base strength.
- Students will demonstrate an understanding of electrochemistry in designing simple electrodes and will use reduction/oxidation potentials to characterize electrodes.
- Students will be able to apply transition state theory to reaction kinetics. Students will be able to model mathematically rates of multiple reaction types.
- Students will be able to apply the periodic nature of the elements to classify elements and identify the compositions of inorganic salts.

7. All students are required to construct a portfolio of their work that includes samples of their writing, scientific data analysis, and presentations--both oral and written. The porfolio will be evaluated during the semester before graduation.

*Hours include courses that may fulfill university core requirements.

## Show all Geological Sciences (Geol) Courses

# Minor in Geology (16 hours)

Show All Course Descriptions
Hide All Course Descriptions

## Program Requirements

1. When all of the geology credit required for a minor is transferred from another school, at least one course in geology must be taken at BYU.
2. No D credit is allowed in minor courses.
3. Complete the following:

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 112 : Historical Geology. (4:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 111

DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

**Course Outcomes**

- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere, and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological, depositional, tectonic, and climatic events in the context of the geological timescale.
- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

4. Complete eight hours from the following:

GEOL 100 : Dinosaurs. (3:1:2)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Hands-on examination of vertebrate fossils -- especially dinosaurs. For nonscience majors. Field trips.

**Course Outcomes**

- Be able participate in meaningful discussions on the relationships of science and religion.
- Confidently explain the relationships between deep time, the diversity of life, and plate tectonics.
- Be able to explain how science works via examples from geology and paleontology.
- Have an infectious sense of awe and wonder for today's biotic and abiotic realms as part of an ever-changing Earth.
- Using cladistic methods be able to explain the basic phylogenetic relationships within Dinosauria, including birds.

GEOL 109 : Geology of the Planets. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Origins and distinctive histories of the planets in our solar system as revealed by study of their surface features.

NOTE: For nonscience and science majors.

**Course Outcomes**

- Learn to piece together new information, draw inferences, reexamine older geological theories based only on our terrestrial experience, and formulate new theories about the way planets behave and how they originated. Finally, you may be able to propose novel ways to test these new ideas.
- Be able to reconstruct the histories of the planets, their moons, and other bodies.
- Understand the fundamental principles of geology by studying the development of the planetsin the solar system.
- Gain a greater appreciation of how our own planet functions and why it is uniquely suited for life.

GEOL 210 : Field Studies. (3:0:9)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111 & GEOL 112

DESCRIPTION: Procedures in observing, collecting, and recording field data concerning properties of rock units.

NOTE: Contact Geological Sciences Department before April 15 for dates of upcoming August trip.

**Course Outcomes**

- Learn how to take accurate and complete field notes.Learn how to use a compass to measure strike and dip on outcrops in the field.Learn how to read topographic and geologic maps and relate the map to what you see in the field.
- Review rocks and minerals learned in earlier courses and be able to accurately identify them in the field.Understand the relationships between igneous rocks and minerals and magmatic processes.Understand the relationships between metamorphic rocks and minerals and the processes that formed them.Understand the significance of sedimentary rocks in understanding depositional systems and regional tectonics.
- Learn the basics of making a geologic map.Learn how to interpret the geology on a map to draw a geologic cross-section.Write up the results of data you collected along with your interpretation in a clear, consise manner.
- Become detailed observers of field geology
- Understand the formative processes of the geology of Utah's National Parks including Zion NP, Bryce Canyon NP, and Capitol Reef NP.
- Develop an understanding of the interelationships of stratigraphy, structural geology, and surficial processes on landscape evolution.

GEOL 351 : Mineralogy. (4:2:4)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112; Chem 105 or 111 or concurrent enrollment.

DESCRIPTION: Principles of crystallography and crystal chemistry. Physical, chemical, and crystallographic properties of minerals.

**Course Outcomes**

- Demonstrate understanding of the fundamental ideas that govern the arrangement of atoms into a crystalline structure (chemical bonding, atomic size, coordination number, polymerization of polyhedra, bond strength and bond valence, stability, etc.)
- Demonstrate a basic understanding of atomic level symmetry. Enumerate and describe the crystal systems in terms of both symmetry and unit-cell metrics, recognize symmetry elements in well-formed natural crystals, and determine crystal classes of such crystals.
- Describe the applications and limitations of important instrumental/analytical methods used in mineralogy.
- Identify specimens of the 60-70 most common minerals at least 70% of the time.
- Demonstrate an understanding of the mechanisms and implications of various mineralogical phenomena, including solid solution, exsolution, polymorphism, atomic ordering, polytypism, color, and twinning.
- Discuss the interrelationships among crystallography, composition, and the physical properties of minerals.
- Demonstrate the ability to apply principles learned to minerals not specifically encountered in the course.
- Use computer software for reduction of mineralogical data and be able to discuss its limitations.
- Demonstrate the ability to work in teams to collect and analyze mineralogical data and incorporate it into an original, high quality research paper on an assigned subject of mineralogical significance.

GEOL 352 : Petrology. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 210 & GEOL 351 & CHEM 105; or GEOL 210 & GEOL 351 & CHEM 111

DESCRIPTION: Compositions, fabrics, and field relations of igneous and metamorphic rocks; behavior of rock-forming systems. Field trips.

**Course Outcomes**

- Explain how magmas form and differentiate at divergent and convergent plate boundaries and at mantle plumes.
- Describe how metamorphic rocks form and their relationships to global tectonics.
- Identify the minerals and rock types using hand samples and thin sections of the major rock types.

GEOL 370 : Sedimentology and Stratigraphy. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 112 & GEOL 210 & GEOL 230

DESCRIPTION: Erosion; sediment entrainment, transport, and deposition; depositional systems and facies analysis; principles of stratigraphy. Field trips.

**Course Outcomes**

- Apply problem solving, critical thinking, and communication skills relative to depositional models and interpreting the stratigraphic record.
- Understand depositional systems, facies relationships, and introductory aspects of sequence stratigraphy.
- Discuss processes and forces that weather, transport, and deposit sedimentary grains under both sunaqueous and subarial conditions.
- Observe and describe sedimentary rocks objectectively. Gain the ability to communicate using appropriate scientific vocabulary.

GEOL 375 : Structural Geology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 230 & MATH 113; Phscs 105 or concurrent enrollment.

DESCRIPTION: Geometric, kinematic, and dynamic analysis of tectonic features. Practical exercises. Using aerial photos. Field trips.

**Course Outcomes**

- My goal is for each of student to learn to become a part of the ongoing conversation about how Earth's crust deforms. This means learning the language of structural geology and using it to share the discoveries they make for themselves. Discoveries in structural geology come through applying best-fit kinematic and dynamic models to geometric reconstructions of observed geological structure. The discovery is complete when they are communicated effectively through writing, illustrations and oral presentation.
- 1. Identify and measure brittle Structure (extensional and shear fractures, fault-related folds)2. Identify and measure ductile Structure (flow folds, cleavage, foliation and rock fabrics)
- 1. Acquire reliable measurements of the geometry of structures with a compass2. Present and manipulate data using stereographic projection3. Interpret stress and kinematic histories from structural measurements4. Infer geometry of subsurface and missing parts of structures from measurements in order to construct a viable geologic cross-section.
- 1. Identify and interpret sense-of-shear indicators associated with both brittle and ductile structures in the field2. Reconstruct the deformation path of a structural feature or deformed region
- 1. Derive the normal and shear stress components for rock failure from lab data.2. Use these results to derive the constituitive equations for deformation3. Quantify the contribution of each deformational mechanism in a region.
- 1. Measure the orientation, slip rate and direction of the Wasatch Fault2. Combine these measurements with GPS and EDM results on strain accumulation rates3. Determine the most likely location and magnitude of the next large earthquake along the Wasatch Fault.
- 1. Use structural data to predict the best location to drill for water, oil and gas.2. Use structural data to predict the location of mineral resources3. Use structural data to predict the environmental impact of toxic waste disposal

GEOL 405 : Applied Mathematics in the Geological Sciences. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 113 & GEOL 111

RECOMMENDED: Geol 230.

DESCRIPTION: Provides a broad survey of mathematical methods that are relevant for geological problems. Focuses on casting geological problems in mathematical terms and solving them. Strong emphasis on setting up equations and on the quality of written solutions.

**Course Outcomes**

No outcomes are available at this time.

GEOL 411 : Geomorphology and Remote Sensing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330

DESCRIPTION: Interpretive analysis of landforms and their geologic significance. Use of aerial/satellite images of Earth and other planets, topographic/bathymetric maps, multi-wavelength image data. Field

trips.

**Course Outcomes**

- Understand the relationships between landscapes and the processes that created them
- Develop an ability to read and interpret geology and geomorphology from topographic maps, air photos, and satellite data
- Become comfortable with quantitative analyses of landforms and geomorphic processes
- Acquire an appreciation for the unique and complex way the landscapes of Earth and the planets evolved to their present-day morphologies

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

**Course Outcomes**

- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

GEOL 440 : Solid Earth Geophysics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106 & MATH 112 & GEOL 111

DESCRIPTION: Physics of the earth, including earthquake seismology. Gravity, seismic, magnetic, electrical, and heat flow properties and methods.

**Course Outcomes**

- Understand the fundamental principles of plate motions, seismic waves, gravity, magnetics, heat flow, and mantle convection
- Develop the ability to analyze processes in Earth's interior and on its surface through use of mathematics and problem solving
- Become comfortable with reading scientific papers, analyzing their content, and writing summaries of your analyses
- Acquire an appreciation for the unique and complex processes in Earth's interior and the resulting surface manifestations and implications for development of life

GEOL 445 : Geochemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 106 & CHEM 107 & GEOL 352; or CHEM 112 & GEOL 352

DESCRIPTION: Applying elementary chemical principles to understand geologic processes and materials.

**Course Outcomes**

- Students will mathematically describe geochemical fractionation, mixing, kinetics, transport, and equilibrium.
- Students will solve geochemical problems both analytically and using computer software.
- Students will improve their scientific writing skills.

GEOL 452 : Petrography to Petrogenesis. (3:2:1)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: GEOL 351 & GEOL 352

DESCRIPTION: Principles of optical mineralogy and their application to the identification of minerals in thin section Petrographic analysis and its relation to rock-forming processes in igneous, metamorphic, and sedimentary rocks.

**Course Outcomes**

There are no course outcomes available

GEOL 460 : Economic and Resource Geology. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 352

DESCRIPTION: Nature and genesis of metallic and non-metallic mineral deposits, including laboratory study of economic minerals. Field trips.

**Course Outcomes**

- Identify important ore-forming minerals, textures, and structures in hand sample and in the field.
- Compare and contrast the principal ore-forming processes: magmatic, hydrothermal, and sedimentary.

Use observed characteristics of an ore deposit to develop a genetic model for its origin.
- Develop an exploration strategy for an ore deposit based on a genetic model.

GEOL 480 : Paleontology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 112

DESCRIPTION: Distribution, morphology, paleoecology, evolution, and stratigraphic significance of organisms in the geologic record. Field trips.

**Course Outcomes**

- Demonstrate understanding of the nature of fossils and types of fossilization that turn organic remains into fossils.
- Be able to explain the incompleteness of the fossil record and the taphonomic processes that affect fossils between death and burial and burial and discovery.
- Be able to recognize the major groups of invertebrate fossils on the basis of their morphology and be able to identify key index fossils to the species level.
- Demonstrate understanding of the uses of fossils in solving geological problems: paleoenvironments, relative age, paleocology.
- Understand the role of fossils in demonstrating the patterns of evolution through time.

# Minor in Geology Teaching (20-21 hours)

Show All Course Descriptions
Hide All Course Descriptions

*This minor is designed to prepare students to teach in public schools. A teaching minor may only be received by students graduating with a teaching major. In order to graduate with this minor, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 350 MCKB, (801) 422-3426.*

## Program Requirements

1. When all of the geology credit required for a minor is transferred from another school, at least one course in geology must be taken at BYU.
2. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.
3. Complete the following:

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 112 : Historical Geology. (4:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 111

DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

**Course Outcomes**

- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and

its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere, and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological, depositional, tectonic, and climatic events in the context of the geological timescale.
- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

PHY S 377 : Teaching Methods and Instruction. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHY S 276

DESCRIPTION: Developing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Using Science Standards as a quide develop Assessments, Lesson Plans, Outlines, and all parts of a unit of science instruction.
- Inquiry, Constructivism, Lab, Activities, Projects and other methods to engage students in learning. These teaching methods will be modeled and practiced by the students.
- Students will complete Transition 2 level toward teaching license.

4. Complete three courses from the following:

GEOL 100 : Dinosaurs. (3:1:2)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Hands-on examination of vertebrate fossils -- especially dinosaurs. For nonscience majors. Field trips.

**Course Outcomes**

- Be able participate in meaningful discussions on the relationships of science and religion.
- Confidently explain the relationships between deep time, the diversity of life, and plate tectonics.
- Be able to explain how science works via examples from geology and paleontology.
- Have an infectious sense of awe and wonder for today's biotic and abiotic realms as part of an ever-changing Earth.
- Using cladistic methods be able to explain the basic phylogenetic relationships within Dinosauria, including birds.

GEOL 109 : Geology of the Planets. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Origins and distinctive histories of the planets in our solar system as revealed by study of their surface features.

NOTE: For nonscience and science majors.

**Course Outcomes**

- Learn to piece together new information, draw inferences, reexamine older geological theories based only on our terrestrial experience, and formulate new theories about the way planets behave and how they originated. Finally, you may be able to propose novel ways to test these new ideas.
- Be able to reconstruct the histories of the planets, their moons, and other bodies.
- Understand the fundamental principles of geology by studying the development of the planetsin the solar system.
- Gain a greater appreciation of how our own planet functions and why it is uniquely suited for life.

GEOL 210 : Field Studies. (3:0:9)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111 & GEOL 112

DESCRIPTION: Procedures in observing, collecting, and recording field data concerning properties of rock units.

NOTE: Contact Geological Sciences Department before April 15 for dates of upcoming August trip.

**Course Outcomes**

- Learn how to take accurate and complete field notes.Learn how to use a compass to measure strike and dip on outcrops in the field.Learn how to read topographic and geologic maps and relate the map to what you see in the field.
- Review rocks and minerals learned in earlier courses and be able to accurately identify them in the field.Understand the relationships between igneous rocks and minerals and magmatic processes.Understand the relationships between metamorphic rocks and minerals and the processes that formed them.Understand the significance of sedimentary rocks in understanding depositional systems and regional tectonics.
- Learn the basics of making a geologic map.Learn how to interpret the geology on a map to draw a geologic cross-section.Write up the results of data you collected along with your interpretation in a clear, consise manner.
- Become detailed observers of field geology
- Understand the formative processes of the geology of Utah's National Parks including Zion NP, Bryce Canyon NP, and Capitol Reef NP.
- Develop an understanding of the interelationships of stratigraphy, structural geology, and surficial processes on landscape evolution.

GEOL 351 : Mineralogy. (4:2:4)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112; Chem 105 or 111 or concurrent enrollment.

DESCRIPTION: Principles of crystallography and crystal chemistry. Physical, chemical, and crystallographic properties of minerals.

**Course Outcomes**

- Demonstrate understanding of the fundamental ideas that govern the arrangement of atoms into a crystalline structure (chemical bonding, atomic size, coordination number, polymerization of polyhedra, bond strength and bond valence, stability, etc.)
- Demonstrate a basic understanding of atomic level symmetry. Enumerate and describe the crystal systems in terms of both symmetry and unit-cell metrics, recognize symmetry elements in well-formed natural crystals, and determine crystal classes of such crystals.
- Describe the applications and limitations of important instrumental/analytical methods used in mineralogy.
- Identify specimens of the 60-70 most common minerals at least 70% of the time.
- Demonstrate an understanding of the mechanisms and implications of various mineralogical phenomena, including solid solution, exsolution, polymorphism, atomic ordering, polytypism, color, and twinning.
- Discuss the interrelationships among crystallography, composition, and the physical properties of minerals.
- Demonstrate the ability to apply principles learned to minerals not specifically encountered in the course.
- Use computer software for reduction of mineralogical data and be able to discuss its limitations.
- Demonstrate the ability to work in teams to collect and analyze mineralogical data and incorporate it into an original, high quality research paper on an assigned subject of mineralogical significance.

GEOL 352 : Petrology. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 210 & GEOL 351 & CHEM 105; or GEOL 210 & GEOL 351 & CHEM 111

DESCRIPTION: Compositions, fabrics, and field relations of igneous and metamorphic rocks; behavior of rock-forming systems. Field trips.

**Course Outcomes**

- Explain how magmas form and differentiate at divergent and convergent plate boundaries and at mantle plumes.
- Describe how metamorphic rocks form and their relationships to global tectonics.
- Identify the minerals and rock types using hand samples and thin sections of the major rock types.

GEOL 370 : Sedimentology and Stratigraphy. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 112 & GEOL 210 & GEOL 230

DESCRIPTION: Erosion; sediment entrainment, transport, and deposition; depositional systems and facies analysis; principles of stratigraphy. Field trips.

**Course Outcomes**

- Apply problem solving, critical thinking, and communication skills relative to depositional models and interpreting the stratigraphic record.
- Understand depositional systems, facies relationships, and introductory aspects of sequence stratigraphy.
- Discuss processes and forces that weather, transport, and deposit sedimentary grains under both sunaqueous and subarial conditions.
- Observe and describe sedimentary rocks objectectively. Gain the ability to communicate using appropriate scientific vocabulary.

GEOL 375 : Structural Geology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 230 & MATH 113; Phscs 105 or concurrent enrollment.

DESCRIPTION: Geometric, kinematic, and dynamic analysis of tectonic features. Practical exercises. Using aerial photos. Field trips.

**Course Outcomes**

- My goal is for each of student to learn to become a part of the ongoing conversation about how Earth's crust deforms. This means learning the language of structural geology and using it to share the discoveries they make for themselves. Discoveries in structural geology come through applying best-fit kinematic and dynamic models to geometric reconstructions of observed geological structure. The discovery is complete when they are communicated effectively through writing, illustrations and oral presentation.
- 1. Identify and measure brittle Structure (extensional and shear fractures, fault-related folds)2. Identify and measure ductile Structure (flow folds, cleavage, foliation and rock fabrics)
- 1. Acquire reliable measurements of the geometry of structures with a compass2. Present and manipulate data using stereographic projection3. Interpret stress and kinematic histories from structural measurements4. Infer geometry of subsurface and missing parts of structures from measurements in order to construct a viable geologic cross-section.
- 1. Identify and interpret sense-of-shear indicators associated with both brittle and ductile structures in the field2. Reconstruct the deformation path of a structural feature or deformed region
- 1. Derive the normal and shear stress components for rock failure from lab data.2. Use these results to derive the constituitive equations for deformation3. Quantify the contribution of each deformational mechanism in a region.
- 1. Measure the orientation, slip rate and direction of the Wasatch Fault2. Combine these measurements with GPS and EDM results on strain accumulation rates3. Determine the most likely location and magnitude of the next large earthquake along the Wasatch Fault.
- 1. Use structural data to predict the best location to drill for water, oil and gas.2. Use structural data to

predict the location of mineral resources3. Use structural data to predict the environmental impact of toxic waste disposal

GEOL 405 : Applied Mathematics in the Geological Sciences. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 113 & GEOL 111

RECOMMENDED: Geol 230.

DESCRIPTION: Provides a broad survey of mathematical methods that are relevant for geological problems. Focuses on casting geological problems in mathematical terms and solving them. Strong emphasis on setting up equations and on the quality of written solutions.

**Course Outcomes**

No outcomes are available at this time.

GEOL 411 : Geomorphology and Remote Sensing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330

DESCRIPTION: Interpretive analysis of landforms and their geologic significance. Use of aerial/satellite images of Earth and other planets, topographic/bathymetric maps, multi-wavelength image data. Field trips.

**Course Outcomes**

- Understand the relationships between landscapes and the processes that created them
- Develop an ability to read and interpret geology and geomorphology from topographic maps, air photos, and satellite data
- Become comfortable with quantitative analyses of landforms and geomorphic processes
- Acquire an appreciation for the unique and complex way the landscapes of Earth and the planets evolved to their present-day morphologies

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

**Course Outcomes**

- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

GEOL 440 : Solid Earth Geophysics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106 & MATH 112 & GEOL 111

DESCRIPTION: Physics of the earth, including earthquake seismology. Gravity, seismic, magnetic, electrical, and heat flow properties and methods.

**Course Outcomes**

- Understand the fundamental principles of plate motions, seismic waves, gravity, magnetics, heat flow, and mantle convection
- Develop the ability to analyze processes in Earth’s interior and on its surface through use of mathematics and problem solving
- Become comfortable with reading scientific papers, analyzing their content, and writing summaries of your analyses
- Acquire an appreciation for the unique and complex processes in Earth’s interior and the resulting surface manifestations and implications for development of life

GEOL 445 : Geochemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 106 & CHEM 107 & GEOL 352; or CHEM 112 & GEOL 352

DESCRIPTION: Applying elementary chemical principles to understand geologic processes and materials.

**Course Outcomes**

- Students will mathematically describe geochemical fractionation, mixing, kinetics, transport, and equilibrium.
- Students will solve geochemical problems both analytically and using computer software.
- Students will improve their scientific writing skills.

GEOL 452 : Petrography to Petrogenesis. (3:2:1)

WHEN TAUGHT: Winter Odd Yrs.
PREREQUISITE: GEOL 351 & GEOL 352
DESCRIPTION: Principles of optical mineralogy and their application to the identification of minerals in thin section Petrographic analysis and its relation to rock-forming processes in igneous, metamorphic, and sedimentary rocks.

**Course Outcomes**

There are no course outcomes available

GEOL 460 : Economic and Resource Geology. (3:2:2)

WHEN TAUGHT: Winter
PREREQUISITE: GEOL 352
DESCRIPTION: Nature and genesis of metallic and non-metallic mineral deposits, including laboratory study of economic minerals. Field trips.

**Course Outcomes**

- Identify important ore-forming minerals, textures, and structures in hand sample and in the field.
- Compare and contrast the principal ore-forming processes: magmatic, hydrothermal, and sedimentary.
- Use observed characteristics of an ore deposit to develop a genetic model for its origin.
- Develop an exploration strategy for an ore deposit based on a genetic model.

GEOL 480 : Paleontology. (3:3:2)

WHEN TAUGHT: Fall
PREREQUISITE: GEOL 112
DESCRIPTION: Distribution, morphology, paleoecology, evolution, and stratigraphic significance of organisms in the geologic record. Field trips.

**Course Outcomes**

- Demonstrate understanding of the nature of fossils and types of fossilization that turn organic remains into fossils.
- Be able to explain the incompleteness of the fossil record and the taphonomic processes that affect fossils between death and burial and burial and discovery.
- Be able to recognize the major groups of invertebrate fossils on the basis of their morphology and be able to identify key index fossils to the species level.
- Demonstrate understanding of the uses of fossils in solving geological problems: paleoenvironments, relative age, paleocology.
- Understand the role of fossils in demonstrating the patterns of evolution through time.

## Undergraduate Courses

### 100-Level Courses

GEOL 100 : Dinosaurs. (3:1:2)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Hands-on examination of vertebrate fossils -- especially dinosaurs. For nonscience majors. Field trips.

**Course Outcomes**

- Be able participate in meaningful discussions on the relationships of science and religion.
- Confidently explain the relationships between deep time, the diversity of life, and plate tectonics.
- Be able to explain how science works via examples from geology and paleontology.
- Have an infectious sense of awe and wonder for today's biotic and abiotic realms as part of an ever-changing Earth.
- Using cladistic methods be able to explain the basic phylogenetic relationships within Dinosauria, including birds.

GEOL 101 : Introduction to Geology. (3:2:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Cultural focus on physical and environmental geology for nonscience majors; rocks and minerals. Field trips.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- 1. Understand the difference between minerals and rocks.2. Be able to identify common rocks and minerals.3. Know where and when the basic rock and mineral types form and how they are related to the hydrologic and tectonic systems.
- 1. Understand how the hydrologic system helps to shape the Earth and how the different sub-systems interact.2. Learn the reasons for climate change in both ancient and modern times.
- 1. Learn the basic evidences and ideas that support the Theory of Plate Tectonics.2. Understand how the plate tectonic system works, including the role of the different types of plate boundaries and the forces that help to drive the system.3. Learn how the plate tectonic system has helped to shape the Earth's surface.
- 1. Gain a greater insight into the enormous length of geologic time and the evidences that support this claim.2. Learn the different ways that scientists can determine geologic ages.
- Learn how and why the other planets and moons in our solar system are different from Earth.

GEOL 102 : Geological Field Studies. (3:6:0)

WHEN TAUGHT: Fall Contact Department; Summer Contact Department

DESCRIPTION: Outdoor examination of geological processes via afternoon canyon hikes and other hands-on activities.

NOTE: For nonscience majors. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- 1. Understand the difference between minerals and rocks.2. Be able to identify common rocks and minerals.3. Know where and when the basic rock and mineral types form and how they are related to the hydrologic and tectonic systems.
- 1. Understand how the hydrologic system helps to shape the Earth and how the different sub-systems interact.2. Learn the reasons for climate change in both ancient and modern times.
- 1. Learn the basic evidences and ideas that support the Theory of Plate Tectonics.2. Understand how the plate tectonic system works, including the role of the different types of plate boundaries and the forces that help to drive the system.3. Learn how the plate tectonic system has helped to shape the Earth's surface.
- 1. Gain a greater insight into the enormous length of geologic time and the evidences that support this claim.2. Learn the different ways that scientists can determine geologic ages.

GEOL 103 : Life of the Past. (3:2:1)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Cultural focus on historical geology for nonscience majors; fossils. Field trips.

**Course Outcomes**

There are no course outcomes available

GEOL 108 : Climate and the Earth System. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

DESCRIPTION: Chemical, physical, and biological processes shaping the Earth's surface and climate, emphasizing quantitative methods for measuring and evaluating contemporary climate and environmental changes relative to the last several thousand years.

**Course Outcomes**

There are no course outcomes available

GEOL 109 : Geology of the Planets. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Origins and distinctive histories of the planets in our solar system as revealed by study of their surface features.

NOTE: For nonscience and science majors.

**Course Outcomes**

- Learn to piece together new information, draw inferences, reexamine older geological theories based only on our terrestrial experience, and formulate new theories about the way planets behave and how they originated. Finally, you may be able to propose novel ways to test these new ideas.
- Be able to reconstruct the histories of the planets, their moons, and other bodies.
- Understand the fundamental principles of geology by studying the development of the planetsin the solar system.
- Gain a greater appreciation of how our own planet functions and why it is uniquely suited for life.

GEOL 110 : Geological Science Laboratory. (1:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: GEOL 101

DESCRIPTION: Minerals, rocks, and landforms; the use of topographic and geologic maps; the interpretation of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks. Demonstrate this by completing lab activities treating this subject.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory. Successfully complete lab activities that elucidate these concepts.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.6.Complete lab activities that demonstrate the relationship between geological processes and human activities.

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 112 : Historical Geology. (4:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 111

DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

**Course Outcomes**

- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere, and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological, depositional, tectonic, and climatic events in the context of the geological timescale.
- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

### 200-Level Courses

GEOL 210 : Field Studies. (3:0:9)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111 & GEOL 112

DESCRIPTION: Procedures in observing, collecting, and recording field data concerning properties of rock units.

NOTE: Contact Geological Sciences Department before April 15 for dates of upcoming August trip.

**Course Outcomes**

- Learn how to take accurate and complete field notes.Learn how to use a compass to measure strike and dip on outcrops in the field.Learn how to read topographic and geologic maps and relate the map to what you see in the field.
- Review rocks and minerals learned in earlier courses and be able to accurately identify them in the field.Understand the relationships between igneous rocks and minerals and magmatic processes.Understand the relationships between metamorphic rocks and minerals and the processes that formed them.Understand the significance of sedimentary rocks in understanding depositional systems and regional tectonics.
- Learn the basics of making a geologic map.Learn how to interpret the geology on a map to draw a geologic cross-section.Write up the results of data you collected along with your interpretation in a clear, consise manner.
- Become detailed observers of field geology
- Understand the formative processes of the geology of Utah's National Parks including Zion NP, Bryce Canyon NP, and Capitol Reef NP.
- Develop an understanding of the interelationships of stratigraphy, structural geology, and surficial processes on landscape evolution.

GEOL 230 : Geological Communications. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111

DESCRIPTION: Introduction to writing within the discipline and designing and creating publishable geologic maps and illustrations. Tools include ArcGIS, Adobe Illustrator, and Photoshop. Student portfolio initiated.

**Course Outcomes**

- Become proficient in using the leading software tools including ArcGIS, Illustrator, Photoshop, Acrobat, and MS Excel.
- Design and create publishable geologic maps,illustrations, figures, and tables from geologic data and models.
- Analyze geologic data through basic statistical techniques and simple numerical models.
- Write concise, scientific descriptions of geologic data and illustrations.

### 300-Level Courses

GEOL 330 : Geology for Engineers. (3:2:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Geological processes and materials bearing on engineering practices. Field trips.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.4. Understand the structural and engineering aspects of these materials.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.3. Understand geological hazards and engineering concerns related to the operation of the tectonic system.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the

role of human activity in climate change.

GEOL 351 : Mineralogy. (4:2:4)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112; Chem 105 or 111 or concurrent enrollment.

DESCRIPTION: Principles of crystallography and crystal chemistry. Physical, chemical, and crystallographic properties of minerals.

**Course Outcomes**

- Demonstrate understanding of the fundamental ideas that govern the arrangement of atoms into a crystalline structure (chemical bonding, atomic size, coordination number, polymerization of polyhedra, bond strength and bond valence, stability, etc.)
- Demonstrate a basic understanding of atomic level symmetry. Enumerate and describe the crystal systems in terms of both symmetry and unit-cell metrics, recognize symmetry elements in well-formed natural crystals, and determine crystal classes of such crystals.
- Describe the applications and limitations of important instrumental/analytical methods used in mineralogy.
- Identify specimens of the 60-70 most common minerals at least 70% of the time.
- Demonstrate an understanding of the mechanisms and implications of various mineralogical phenomena, including solid solution, exsolution, polymorphism, atomic ordering, polytypism, color, and twinning.
- Discuss the interrelationships among crystallography, composition, and the physical properties of minerals.
- Demonstrate the ability to apply principles learned to minerals not specifically encountered in the course.
- Use computer software for reduction of mineralogical data and be able to discuss its limitations.
- Demonstrate the ability to work in teams to collect and analyze mineralogical data and incorporate it into an original, high quality research paper on an assigned subject of mineralogical significance.

GEOL 352 : Petrology. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 210 & GEOL 351 & CHEM 105; or GEOL 210 & GEOL 351 & CHEM 111

DESCRIPTION: Compositions, fabrics, and field relations of igneous and metamorphic rocks; behavior of rock-forming systems. Field trips.

**Course Outcomes**

- Explain how magmas form and differentiate at divergent and convergent plate boundaries and at mantle plumes.
- Describe how metamorphic rocks form and their relationships to global tectonics.
- Identify the minerals and rock types using hand samples and thin sections of the major rock types.

GEOL 370 : Sedimentology and Stratigraphy. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 112 & GEOL 210 & GEOL 230

DESCRIPTION: Erosion; sediment entrainment, transport, and deposition; depositional systems and facies analysis; principles of stratigraphy. Field trips.

**Course Outcomes**

- Apply problem solving, critical thinking, and communication skills relative to depositional models and interpreting the stratigraphic record.
- Understand depositional systems, facies relationships, and introductory aspects of sequence stratigraphy.
- Discuss processes and forces that weather, transport, and deposit sedimentary grains under both sunaqueous and subarial conditions.
- Observe and describe sedimentary rocks objectectively. Gain the ability to communicate using appropriate scientific vocabulary.

GEOL 375 : Structural Geology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 230 & MATH 113; Phscs 105 or concurrent enrollment.

DESCRIPTION: Geometric, kinematic, and dynamic analysis of tectonic features. Practical exercises. Using aerial photos. Field trips.

**Course Outcomes**

- My goal is for each of student to learn to become a part of the ongoing conversation about how Earth's crust deforms. This means learning the language of structural geology and using it to share the discoveries they make for themselves. Discoveries in structural geology come through applying best-fit kinematic and dynamic models to geometric reconstructions of observed geological structure. The discovery is complete when they are communicated effectively through writing, illustrations and oral presentation.
- 1. Identify and measure brittle Structure (extensional and shear fractures, fault-related folds)2. Identify and measure ductile Structure (flow folds, cleavage, foliation and rock fabrics)
- 1. Acquire reliable measurements of the geometry of structures with a compass2. Present and manipulate data using stereographic projection3. Interpret stress and kinematic histories from structural measurements4. Infer geometry of subsurface and missing parts of structures from measurements in order to construct a viable geologic cross-section.
- 1. Identify and interpret sense-of-shear indicators associated with both brittle and ductile structures in the field2. Reconstruct the deformation path of a structural feature or deformed region
- 1. Derive the normal and shear stress components for rock failure from lab data.2. Use these results to derive the constituitive equations for deformation3. Quantify the contribution of each deformational mechanism in a region.
- 1. Measure the orientation, slip rate and direction of the Wasatch Fault2. Combine these measurements with GPS and EDM results on strain accumulation rates3. Determine the most likely location and magnitude of the next large earthquake along the Wasatch Fault.
- 1. Use structural data to predict the best location to drill for water, oil and gas.2. Use structural data to predict the location of mineral resources3. Use structural data to predict the environmental impact of toxic waste disposal

GEOL 399R : Academic Internship. (.5-9:0:0)

WHEN TAUGHT: Contact Department.

**Course Outcomes**

- Gain experience in a real world work or research lab that will strengthen your understanding of the concepts learned in class.

### 400-Level Courses

GEOL 405 : Applied Mathematics in the Geological Sciences. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 113 & GEOL 111

RECOMMENDED: Geol 230.

DESCRIPTION: Provides a broad survey of mathematical methods that are relevant for geological problems. Focuses on casting geological problems in mathematical terms and solving them. Strong emphasis on setting up equations and on the quality of written solutions.

**Course Outcomes**

No outcomes are available at this time.

GEOL 410 : Geological Field Methods. (6:0:46)

WHEN TAUGHT: Spring

PREREQUISITE: GEOL 352 & GEOL 370 & GEOL 375; Phscs 105 or concurrent enrollment.

DESCRIPTION: Methods used to observe, collect, and interpret field data in geologic and environmental investigations.

NOTE: Fee.

**Course Outcomes**

- Acquire the fundamental skills to successfully produce a geologic map.Learn how to effectively collect information on structure, stratigraphy, and rock units in the field.Construct a geologic map and cross-section from data you have collected in the field.

GEOL 411 : Geomorphology and Remote Sensing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330

DESCRIPTION: Interpretive analysis of landforms and their geologic significance. Use of aerial/satellite images of Earth and other planets, topographic/bathymetric maps, multi-wavelength image data. Field trips.

**Course Outcomes**

- Understand the relationships between landscapes and the processes that created them
- Develop an ability to read and interpret geology and geomorphology from topographic maps, air photos, and satellite data
- Become comfortable with quantitative analyses of landforms and geomorphic processes
- Acquire an appreciation for the unique and complex way the landscapes of Earth and the planets evolved to their present-day morphologies

GEOL 430 : Senior Thesis. (3:ARR:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: GEOL 352 & GEOL 370 & GEOL 375

DESCRIPTION: Faculty-supervised research on a project of limited scope. Project is chosen and completed by the student. Written and oral presentation of findings required.

**Course Outcomes**

- 1. Gain a greater understanding of your area of interest by working on a mentored research project under the supervision of a faculty member.2. Learn better writing and communication skills by compiling your research into a senior thesis.

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

**Course Outcomes**

- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

GEOL 440 : Solid Earth Geophysics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106 & MATH 112 & GEOL 111

DESCRIPTION: Physics of the earth, including earthquake seismology. Gravity, seismic, magnetic, electrical, and heat flow properties and methods.

**Course Outcomes**

- Understand the fundamental principles of plate motions, seismic waves, gravity, magnetics, heat flow, and mantle convection
- Develop the ability to analyze processes in Earth's interior and on its surface through use of mathematics and problem solving
- Become comfortable with reading scientific papers, analyzing their content, and writing summaries of your analyses
- Acquire an appreciation for the unique and complex processes in Earth's interior and the resulting surface manifestations and implications for development of life

GEOL 445 : Geochemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 106 & CHEM 107 & GEOL 352; or CHEM 112 & GEOL 352

DESCRIPTION: Applying elementary chemical principles to understand geologic processes and materials.

**Course Outcomes**

- Students will mathematically describe geochemical fractionation, mixing, kinetics, transport, and equilibrium.
- Students will solve geochemical problems both analytically and using computer software.
- Students will improve their scientific writing skills.

GEOL 452 : Petrography to Petrogenesis. (3:2:1)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: GEOL 351 & GEOL 352

DESCRIPTION: Principles of optical mineralogy and their application to the identification of minerals in thin section Petrographic analysis and its relation to rock-forming processes in igneous, metamorphic, and sedimentary rocks.

**Course Outcomes**

There are no course outcomes available

GEOL 460 : Economic and Resource Geology. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 352

DESCRIPTION: Nature and genesis of metallic and non-metallic mineral deposits, including laboratory study of economic minerals. Field trips.

**Course Outcomes**

- Identify important ore-forming minerals, textures, and structures in hand sample and in the field.
- Compare and contrast the principal ore-forming processes: magmatic, hydrothermal, and sedimentary.
- Use observed characteristics of an ore deposit to develop a genetic model for its origin.
- Develop an exploration strategy for an ore deposit based on a genetic model.

GEOL 476 : Introduction to Seismic Interpretation. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 370 & GEOL 375

DESCRIPTION: Fundamental techniques; analyzing seismic reflection data. Reviewing fundamentals of seismic trace and geologic implications. Basic mapping of subsurface structure and stratigraphy.

**Course Outcomes**

- Understand and able to explain what a reflection wavelet is. i.e. polarity, phase and amplitude
- Able to identify and interpret, using colored pencils, seismic reflectors on a set of intersecting 2D seismic lines.
- Uses geologic knowledge to infer structure and stratigraphy from seismic reflection data.
- Develop three-dimensional thinking skills.
- Able to coherently and concisely prepare and present technical presentations from:1) Scientific articles2) Seismic interpretation and research
- Generation of a hand-drawn time-structure map using the interpretation generated in Learning Outcome "2D Interpretation"
- Learning of 3D interpretation software. Able to interpret 3D data and generate digital time-structure map.

GEOL 480 : Paleontology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 112

DESCRIPTION: Distribution, morphology, paleoecology, evolution, and stratigraphic significance of organisms in the geologic record. Field trips.

**Course Outcomes**

Demonstrate understanding of the nature of fossils and types of fossilization that turn organic remains into fossils.
- Be able to explain the incompleteness of the fossil record and the taphonomic processes that affect fossils between death and burial and burial and discovery.
- Be able to recognize the major groups of invertebrate fossils on the basis of their morphology and be able to identify key index fossils to the species level.
- Demonstrate understanding of the uses of fossils in solving geological problems: paleoenvironments, relative age, paleocology.
- Understand the role of fossils in demonstrating the patterns of evolution through time.

GEOL 490R : Short Courses. (.5-3:ARR:0)

WHEN TAUGHT: Contact Department. Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Short, undergraduate-level courses and extended field trips offered on an irregular basis.

NOTE: Fee.

**Course Outcomes**

- Gain a greater understanding of a particular geologic topic.

GEOL 491R : Geology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar on various geologic topics by guest speakers.

**Course Outcomes**

- Demonstrate familiarity with diverse topics in geological sciences addressed by a series of seminar speakers.
- Interact with geoscientists that have specialized in disciplines of interests of like-minded students.

GEOL 492R : Career Pathways Seminar. (.5:1:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Seminar on graduate school and career opportunities by guest speakers.

**Course Outcomes**

There are no course outcomes available

GEOL 497R : Geological Research. (.5-4:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Supervisor's consent.

DESCRIPTION: Conducting original research under faculty supervision. Project must be approved before registration or starting project.

**Course Outcomes**

- Learn research methods and techniques through faculty mentored research.

GEOL 499R : Honors Thesis. (.5-6:ARR:ARR)

WHEN TAUGHT: Contact Department.

**Course Outcomes**

- 1. Be able to design a scientific study that involves the collection, analysis, and interpretation of data.
- Complete a thesis that describes and contextualizes original observational and/or theoretical work in the geosciences.
- 1. Be able to frame a scientific problem within the current literature on that subject.2. Be able to conduct a search for publications on a particular topic.
- 1. Demonstrate competence in data collections.2. Become familiar with the analytic techniques germaine to the Honor's thesis.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.

## 500-Level Graduate Courses (available to advanced undergraduates)

GEOL 500 : (Geol-Chem-C S-Math-MthEd-Phscs-Stat) Business Career Essentials in Science and Math. (1.5:1.5:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills needed to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.

Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

GEOL 504R : Global Geology Field Studies. (1-3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Any senior-level geology course; instructor's consent.

DESCRIPTION: In-depth study of classic geologic localities, such as Hawaii, the Bahamas, and the Appalachians, preliminary to on-site field study.

**Course Outcomes**

No outcomes are available at this time.

GEOL 521 : Borehole Geophysics and Geology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Instructor's consent.

RECOMMENDED: Phscs 105, 106, Geol 351, 370; or equivalents.

DESCRIPTION: Applied well log analysis, including conventional and new techniques. Subsurface geology and lithology determined from many logs. Determining porosity, permeability, and fluid saturation with hydrology, and hydrocarbon applications.

**Course Outcomes**

- Understand the theoretical basis of well-logging tools that recover information about subsurface rocks and their fluids.
- Be able to interpret the results of well-logging operations.
- Have real-world experiences in classroom and outdoor “lab” settings that will mimic a professional environment.

GEOL 525 : Petroleum Systems Analysis. (4:4:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Geol 370 or equivalent.

DESCRIPTION: Properties of petroleum; exploration methods; generation and migration of hydrocarbons, reservoirs, traps, and seals; sedimentary basin classification; energy resources. Extended field trip required.

**Course Outcomes**

- Understand the 5 critical ingredients of any petroleum accumulation. Understand to a basic level how these 5 criteria are risked in an economicic evaluation of any proposed well. Understand the dynamics and interconnectivity of a petroleum system.
- Understand the variety of conventional and non-conventional resource plays. Understand some of the technologies required to produce these resources.
- Investigate and present to peers the hydrocarbon system of a significant petroleum field or play.
- Understand sedimentary basin types as dictated by their tectonic setting. Under, to a basic level, the hydrocarbon potential of these various basins and the variables that determine their potential or lack of potential. Understand the importance of looking for the exception to the rule.

GEOL 530 : Geological Communications Laboratory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Instructor's consent; graduate status.

DESCRIPTION: Designing and creating a variety of student-selected geological illustrations emphasizing maps and cross-sections.

**Course Outcomes**

- Become proficient in using the leading software tools including ArcGIS, Illustrator, Photoshop, Acrobat, and MS Excel.
- Design and create publishable geologic maps, illustrations, figures, and tables from geologic data and models.
- Analyze geologic data through basic statistical techniques and simple numerical models.
- Write concise, scientific descriptions of geologic data, illustrations, and analyses.

GEOL 531 : Geoscience Data Analysis. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Stat 121 or equivalent.

DESCRIPTION: Basic scientific computing skills in MATLAB, and application of statistical and numerical modeling techniques to geoscientific problems.

**Course Outcomes**

There are no course outcomes available

GEOL 535 : Contaminant Hydrogeology. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Geology 435 or equivalent.

DESCRIPTION: Principles, tools, and applications used to solve heavy metal, organic, and radionuclide groundwater contamination problems. Topics include regulations, mass transport, multiphase flow, transformation, retardation, and attenuation.

**Course Outcomes**

- 1. Learn the fundamental processes by which contaminants are transported in groundwater, including:

diffusion, advection, and dispersion.2. Understand process that delay or limit contaminant transport, including: sorption, reaction, decay (chemical and radioactive), and colloid transport.3. Learn the fundamentals of tranport in the vadose zone, as well as multiphase flow.4. Appreciate the processes involved in the transport of inorganic (including radionuclides) and organic compounds.5. Understand the fundamental principles of ground water monitoring, site characterization, and remediation, including the major federal laws that govern such actions.

GEOL 540 : Principles of Glaciology. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Geophysical problems involving ice in the environment and its role in global change. Topics include atmospheric ice, snow pack, glaciers, ice sheets, sea ice, permafrost, and ice age theories.

**Course Outcomes**

- Describe the components of the cryosphere, their geographical extent, and their physical and chemical properties.
- Apply principles of physics and chemistry to quantify the formation of ice in the environment, mass and energy budgets of cryospheric components, dynamics of large ice masses, and the processes and rates of landscape evolution that result from ice dynamics.
- Evaluate the role of the cryospheric components in global environmental change and discuss the importance of cryospheric change on society.
- Demonstrate the ability to quantify cryospheric formation, dynamics, sensitivities, and interactions through rigorous numerical problem sets and laboratory exercises.
- Demonstrate the ability to work in teams to collect and analyze glaciological data, incorporate it into an original, high quality research poster on a student-chosen topic of significance, and present the research and results orally in a poster session.

GEOL 545 : Isotope Geochemistry-High Temperature Applications. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Geol 352 or equivalent.

DESCRIPTION: Use of stable and radioactive isotope systematics in geochronology in investigation of the origins of igneous and metamorphic rocks and in the study of tectonics.

**Course Outcomes**

There are no course outcomes available

GEOL 546 : Isotope Geochemistry-Low Temperature Applications. (3:2:Arr)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Geol 445 or equivalent.

RECOMMENDED: Geol 435.

DESCRIPTION: Use of stable, radioactive, and radiogenic isotope systematics in geochronology and in investigation of the origins of fluid, sediment, and organic matters in low temperature settings.

**Course Outcomes**

There are no course outcomes available

GEOL 550 : Environmental Soil Chemistry. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: Chem 105, 106, 107; or equivalents.

DESCRIPTION: Chemistry of soil systems at macroscopic and microscopic scales, examined from the perspective of scientists interested in environmental assessment and remediation.

**Course Outcomes**

- Students will competently organize and write a scientific report.
- Students will demonstrate the ability to apply fundamental chemical principles (equilibrium, kinetics, redox) to soil systems.
- Students will demonstrate familiarity with the identity and behavior of the main chemical species that control soil-chemical conditions.
- Students will demonstrate knowledge of environmental impacts of soil contamination, and associated remediation strategies.

GEOL 551 : Advanced Mineralogy. (3:2:2)

WHEN TAUGHT: Winter Contact Department

PREREQUISITE: Geol 351 or equivalent.

DESCRIPTION: Crystallography, structure, and crystal chemistry of major silicate mineral groups.

**Course Outcomes**

There are no course outcomes available

GEOL 552 : Igneous Petrology. (3:4:3)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Geol 352 or equivalent.

DESCRIPTION: Origin and evolution of magmas, emphasizing trace element and isotopic compositions and intensive properties as calculated from mineral compositions.

**Course Outcomes**

- Identify the nature and causes of volcanic eruptions.
- Understand the link between tectonic setting and igneous rock composition.
- Explain how mineral compositions can be used to deduce intensive parameters
- Understand the use of analytical equipment and interpretation of analytical data
- Develop quantitative skills using calculations in a spreadsheet to model igneous processes.
- Refine ability to make oral and written presentations.

GEOL 553 : Metamorphic Petrology. (3:2:1)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: GEOL 352

DESCRIPTION: Principles of metamorphism, including chemical equilibrium and thermodynamics of metamorphic reactions, geothermobarometery, origin and interpretation of zoned metamorphic minerals, pressure-temperature paths, and metamorphism of pelites, mafic, ultramafic and carbonate rocks. Additional subjects based on interest of the students.

**Course Outcomes**

No outcomes are available at this time.

GEOL 555 : Volcanoes and Ore Deposits. (1-3:Arr:Arr)

WHEN TAUGHT: Fall Contact Department

PREREQUISITE: Geol 352 or equivalent.

DESCRIPTION: Examination of the role of volcanic rocks and processes in the generation of ore deposits.

**Course Outcomes**

There are no course outcomes available

GEOL 560 : Reflection Seismology Theory (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Instructor's consent.

RECOMMENDED: Geol 375, Phscs 105, 106; or equivalents.

DESCRIPTION: Principles, tools, and methods used in seismic geophysics, with exploration, engineering, environmental, and hydrological applications.

**Course Outcomes**

- Introduction tothe seismic method, especially for the reflection case.
- Provide a quantitative and theoreticalunderstanding of how the seismic method operates.
- Enable students to comprehend how reflection data are acquired, processed, and interpreted.
- Process seismic reflection data acquired by USGS/ BYU using state-of-the-art tools.

GEOL 561 : Geophysical Field Methods. (3:3:0)

WHEN TAUGHT: Fall Contact Department

PREREQUISITE: Instructor's consent.

RECOMMENDED: Geol 375, Phscs 105, 106; or equivalents.

DESCRIPTION: Geophysical data acquisition processing and computer-assisted interpretation, emphasizing field deployment techniques, use of commercial data processing, and visualization software.

**Course Outcomes**

- Become expert at using an exploration seismograph and ground-penetrating radar (GPR) for subsurface surveying.
- Be able to design and supervise a seismic/GPR survey.
- Have real-world experiences in mostly outdoor “lab” settings that will mimic a professional environment.
- Become acquainted with basic data processing and modeling software tools.

GEOL 565R : Special Topics in Geology. (.5-4:ARR:ARR)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: Instructor's consent.

DESCRIPTION: The following topics may be offered on demand: geology for teachers, ore deposits, solid-water interface chemistry, X-ray crystallography.

**Course Outcomes**

- Demonstrate competence in a specific topic within the geological sciences.

GEOL 571 : Sedimentology and Ecology of Modern Carbonate Systems. (1-3:Arr:Arr)

WHEN TAUGHT: Winter Contact Department

PREREQUISITE: Geol 370 or equivalent.

DESCRIPTION: Field course in the Caribbean emphasizing factors that produce carbonate sediments. Investigation of tidal flat to off-shore barrier reef environments and Pleistocene outcrops.

**Course Outcomes**

There are no course outcomes available

GEOL 574 : Advanced Stratigraphy. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Geol 370 or equivalent.

RECOMMENDED: Geol 480.

DESCRIPTION: Studying the stratigraphic record through modern methods of correlating stratal packages, emphasizing concepts of sequence and seismic stratigraphy, and utilizing methods of chronostratigraphy, biostratigraphy, lithostratigraphy, and absolute dating. Extended field trip required.

**Course Outcomes**

- Understand the vocabulary and fundemental concepts of sequence stratigraphy as they apply to outcrop, core, and seismic sections. Understand how the fundementals of these concepts change when working in siliciclastic depositional systems as compared to carbonate depositional systems.
- A basic understanding of the stratigraphic record and the stratigraphic methods that researchers use to understand Earth history through strata. These methods include biostratigraphy, lithostratigraphy, magnetostratigraphy, seismic stratigraphy, and sequence/chronostratigraphy. The student should understand the fragmentary nature of the straigraphic record and the importance of recognizing hiatuses and unconformities.
- Students will demonstrate their understanding by working through problems associated with field trips to outcrops and core repositories. A term presentation on the sequence or seismic stratigraphy of a given unit of rock is given to further demonstrate that understanding.

GEOL 575 : Advanced Structural Geology. (3:2:3)

WHEN TAUGHT: Winter

PREREQUISITE: Geol 375, 410; or equivalents.

DESCRIPTION: In-depth discussions of a variety of topics in structural geology, emphasizing current literature and problems.

**Course Outcomes**

- 1. Use primarily the scientific literature to discover various deformational features and mechanisms at a variety of spatial and temporal scales2. Use analog and numerical models to investigate how rocks and regions deform

GEOL 576 : Three-Dimensional Subsurface Mapping and Evaluation. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 476

DESCRIPTION: Advanced interpretation of 3D seismic reflection data. Integrating well and seismic data to interpret complex geologic systems. Implications for understanding hydrocarbon reservoirs.

**Course Outcomes**

- Ability to relate basic well log information to seismic character and reflections.
- Improvement of team interaction skills to understand that teamwork yields greater insights. i.e "the sum is greater than the addition of the parts"
- Able to coherently and concisely prepare and present technical presentations from:1) Scientific articles2) Seismic interpretation and research
- 1) Interpretation of assigned 3D dataset(s):2) Ability to determine structural and stratigraphic history/timing.
- Able to effectively:define project objectivesdefine timelines for deliverablesmanage time and effort to deliver/report project results

GEOL 580 : Principles of Paleontology. (3:3:0)

WHEN TAUGHT: Winter Contact Department

PREREQUISITE: Geol 480 or equivalent.

DESCRIPTION: Modern approaches to fossil study applied to areas of evolution, paleoecology, and biostratigraphy.

**Course Outcomes**

No outcomes are available at this time.

GEOL 586 : Vertebrate Paleontology. (4:3:2)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: Instructor's consent.

DESCRIPTION: Paleobiology, osteology, and phylogeny of the vertebrates. Field trips required. Lab studies.

**Course Outcomes**

- Demonstrate your understanding of how science works by writing a four page history of paleontological methodologies, including contributions of significant scientists, and how the methods evolved from the early 1800's to present.
- Understand (1) the goals of taphonomy, (2) the basics elements of how to conduct a taphonomic analysis of a vertebrate site, and (3) the process of perminerization.
- Be able to identify (1) the bones in an amniote skeleton, and(2) the major histologic components of bone.
- (1) Understand core principles of phylogenetic systematics, (2) be able to interpret and construct cladograms, and (3), be able to explain to a peer the derived diagnostic osteologic characters for major vertebrate clades, (i.e., Craniata, Tetrapoda, Amniota, Sauropsida, Diapsida, and so on).
- Be able to locate, collect, document, and interpret fossils in the field and curate specimens once in a repository with a level of competence equal to that of an entry-level field technician.
- Be able to explain to a biology graduate the impact of plate tectonics on biodiversity though deep time using examples from the fossil record and extant mammals.
- Be able participate in meaningful discussions on the relationships of science and religion.

GEOL 590R : Short Courses. (1-3:3:3)

WHEN TAUGHT: Contact Department. Fall; Winter; Spring; Summer

DESCRIPTION: Short graduate-level courses offered on a random basis.

NOTE: Fee.

**Course Outcomes**

- Demonstrate competence in a specific topic within the geological sciences, to be specified by the instructor.

GEOL 591R : Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar on various geologic topics by guest speakers.

NOTE: Total of 1 credit hour required.

**Course Outcomes**

- Demonstrate familiarity with diverse topics in geological sciences addressed by a series of seminar speakers.

GEOL 592R : Career Pathways Seminar. (.5:1:0)

WHEN TAUGHT: Fall Even Yrs.; Winter Contact Department

DESCRIPTION: Seminar on graduate school and career opportunities by guest speakers.

**Course Outcomes**

There are no course outcomes available

GEOL 599R : Academic Internship. (1-9:0:0)

WHEN TAUGHT: Contact Department.

**Course Outcomes**

- Gain experience in a real world work or research lab that will strengthen your understanding of the concepts learned in class.

## Graduate Courses

For 600- and 700-level courses, see the BYU 2014–2015 Graduate Catalog.

## Professors

Bickmore, Barry R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1994
PhD, Virginia Polytechnic Inst, 1999

Christiansen, Eric H.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1977
ScM, Brown University, 1981
PhD, Arizona State University, 1981

Harris, Ron

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, University of Oregon, 1982
MS, University of Alaska, Fairbanks, 1985
PhD, University of London, 1989

Keith, Jeffrey Davis

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1977
MS, University of Wisconsin, Madison, 1980
PhD, University of Wisconsin, Madison, 1982

Kowallis, Bart J.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1977
MS, University of Wisconsin, Madison, 1979
PhD, University of Wisconsin, Madison, 1981

McBride, John Henry

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, University of Arkansas, 1978
MS, University of Arkansas, 1980
PhD, Cornell University, 1987

Morris, Thomas H.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1981
MS, University of Wisconsin, Madison, 1983
PhD, University of Wisconsin, Madison, 1986

Nelson, Stephen Tracy

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1984
MS, Brigham Young University, 1987
PhD, University of California, Los Angeles, 1991

Ritter, Scott M.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1981
MS, Brigham Young University, 1983
PhD, University of Wisconsin, 1986

## Associate Professors

Britt, Brooks Bradley

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1982
MS, Brigham Young University, 1987
PhD, University of Calgary, 1993

Radebaugh, Jani

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1993
MS, Brigham Young University, 1999
PhD, University of Arizona, 2005

Rupper, Summer

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 2000
MS, University of Washington, 2003
PhD, University of Washington, Seattle, 2007

## Assistant Professor

Carling, Gregory T.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2005
MS, Brigham Young University, 2007
PhD, University of Utah, 2012

## Associate Teaching Professor

Skinner, Malcolm R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Associate Teaching Professor
**DEGREES:** BS, Brigham Young University, 1992
MS, Brigham Young University, 1996

## Research Professors

Dorais, Michael John

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences
**RANK:** Research Professor
**DEGREES:** BS, Brigham Young University, 1980
MS, University of Oregon, 1983
PhD, University of Georgia, 1987

Tingey, David G.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Geological Sciences

College of Physical and Mathematical Sciences Advisement Center
N-179 ESC, (801) 422-6270

## Admission to Degree Program

The degree program in the Department of Mathematics is open enrollment.

## The Discipline

Mathematics is a means of dealing with order, pattern, and number as seen in the world around us. The abilities to compute, to think logically, and to take a reasoned approach to solving problems are highly valued in society and are characteristics of any educated person. Mathematics is not just a body of knowledge, but a process of analysis, reasoning, comparison, deduction, generalization, and problem solving.

A mathematician's stock in trade is the ability to solve problems and to explain the solutions to others. Having once determined what the right questions are, solving problems involves analyzing both concrete and abstract situations, relating them to mathematical ideas, and using mathematical techniques to work toward solutions. Explaining the solution involves pointing out what has been solved and why the solution is valid.

## Career Opportunities

Majors in mathematics (BS) prepare for a wide variety of careers. Some enter graduate school or professional schools and prepare for careers in such fields as college teaching, consulting, research and development, law, medicine, and business administration. Others take positions in government agencies, industrial laboratories, information management firms, or business organizations. All of them spend much time communicating with colleagues about the problems they are solving as they continue to learn more mathematics and share mathematical ideas with others.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

## Undergraduate Programs and Degrees

**BS in Mathematics** (Program Outcomes)
**Applied and Computational Mathematics Emphasis (optional)** (Program Outcomes)

**Minor in Mathematics**

Students should see their college advisement center for help or information concerning the undergraduate programs.

## Graduate Programs and Degrees

MS in Mathematics
PhD in Mathematics

For more information see the BYU 2014–2015 Graduate Catalog.

## Advisement

Students whose grade point average is less than a B in Math 112, 113, 290, 313 and 314 need to realize that advanced courses require much more depth of understanding and may be difficult for them. All students are encouraged to meet regularly with a faculty advisor.

Students who are considering graduate work in mathematics may also receive advice from the graduate coordinator.

## General Information

1. It is recommended that a student complete the following courses in high school:
    - 4 units of English
    - 1 unit of physics or chemistry.
    - 4 units of mathematics, including 2.5 units of algebra, 1 unit of geometry, and .5 unit of trigonometry. This qualifies a student to begin college mathematics with Math 112. If calculus is available in high school, a student planning to major in mathematics is strongly encouraged to take it; doing so requires completing one of the preceding algebra units before high school.
    - Advanced Placement (AP) credit is available in mathematics as follows:
        - A score of 3 on the calculus AB exam gives credit in Math 110 and 111; a score of 4 or 5 on the calculus AB exam gives credit in Math 110 and 112.
        - A score of 3 on the calculus BC exam gives credit in Math 110 and 111; a score of 4 on the calculus BC exam gives credit in Math 110 and 112; a score of 5 on the calculus BC exam gives credit in Math 112 and 113.
        - An AP student without credit in Math 112 must begin with Math 112; an AP student without credit in Math 113 must begin with Math 112 or 113.
    - AP students should direct Educational Testing Service (ETS) to report scores to BYU to have credit posted.

Questions regarding placement should be directed to the Mathematics Department, 292 TMCB.

## Program Requirements | View MAP | View Program Outcomes

1. Grades of C- or below will not be acceptable in major courses.
2. Complete the following core requirements:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 191 : Seminar in Mathematics 1. (.5:1:0)

WHEN TAUGHT: Fall
RECOMMENDED: Math 113.
DESCRIPTION: Careers, topics, and problems in mathematics.

**Course Outcomes**

There are no course outcomes available

MATH 290 : Fundamentals of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 112 or concurrent enrollment with instructor's consent.
DESCRIPTION: Achieving maturity in mathematical communication. Introduction to mathematical proof; methods of proof; analysis of proof; induction; logical reasoning.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in mathematical thinking. It is intended as an introduction to mathematical proof, and students who finish the course should achieve maturity in mathematical communication. For more detailed information visit the Math 290 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 113 and Math 313.
DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

MATH 341 : Theory of Analysis 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Math 113 and Math 290.
DESCRIPTION: Rigorous treatment of calculus of a single real variable: topology, order, completeness of real numbers; continuity, differentiability, integrability, and convergence of functions.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the real number system and of real-valued functions of a single real variable, with the focus being on the theoretical and logical foundations of single-variable calculus. A secondary purpose of this course is to reinforce students' prior training in discovering and writing valid mathematical proofs.For more detailed information visit the Math 341 Wiki.

MATH 342 : Theory of Analysis 2. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 313 & MATH 341
DESCRIPTION: Rigorous treatment of calculus of several real variables; metric spaces, geometry and topology of Euclidean space, differentiation implicity function theorem, integration on sets and manifolds.

**Course Outcomes**

- Math 342 is the multivariable sequel to Math 341. Itprovides a rigorous treatment of multivariable calculus. Unlike the case with Math 341, Math 342 students are not required to have had an introductory course in the subject matter, so Math 342 needs to treat both computation and theory in some depth.For more detailed information visit the Math 342 Wiki entry.

MATH 352 : Introduction to Complex Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 290; Math 341 or concurrent enrollment.
DESCRIPTION: Complex algebra, analytic functions, integration in the complex plane, infinite series, theory of residues, conformal mapping.

**Course Outcomes**

- This course is aimed at graduates majoring in mathematical and physical sciences and engineering. In addition to being an important branch of mathematics in its own right, complex analysis is an important tool for differential equations (ordinary and partial), algebraic geometry and number theory. Thus it is a core requirement for all mathematics majors. It contributes to all the expected learning outcomes of the Mathematics BS degree.For more detailed information visit the Math 352 Wiki page.
- Students will master complex numbers, limits, analytic functions, elementary functions in the complex plane, contour integrals, Taylor series, Laurent series, isolated singularities, residue theory and applications, and conformal mappings.

MATH 371 : Abstract Algebra 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 290 & MATH 313

DESCRIPTION: Groups, group homomorphisms, rings, ideals, and polynomials.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in abstract algebra. In addition to being an important branch of mathematics in its own right, abstract algebra is now an essential tool in number theory, geometry, topology, and, to a lesser extent, analysis. Thus it is a core requirement for all mathematics majors. Outside of mathematics, algebra also has applications in cryptography, coding theory, quantum chemistry, and physics. For more detailed information visit the Math 371 Wiki page.

3. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

4. Complete one of the following:

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable

- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 370 : Statistical Theory for Actuaries. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314

DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

5. Complete fifteen hours from the following:

C S 235 : Data Structures and Algorithms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 142

DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

**Course Outcomes**

- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- Write programs that require ~500 lines of code.

MATH 300 : (Math-MthEd) History and Philosophy of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Math 113.

DESCRIPTION: Historical development of important mathematical ideas and philosophies; implications for the mathematical curriculum.

**Course Outcomes**

- Students understand and can describe the major approaches—cultural, philosophical, and psychological—to explaining the origin and nature of mathematics and its relation to understanding and modeling the physical world.
- Students understand and can describe the major historical periods of development of mathematical thought, as well as the contributions of various cultures and individuals within those periods.
- Students understand and can describe the historical development of concepts and practices central to school mathematics, including numeration, arithmetic, algebra, geometry, calculus, and probability.
- Through understanding the complex relationship between mathematical practices and human experience, students appreciate the complexity of teaching and learning mathematics and the different approaches and experiences adolescents will bring to learning those practices.

MATH 355 : Graph Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 313

DESCRIPTION: Maps, graphs and digraphs, coloring problems, applications.

**Course Outcomes**

- Graphs, trees, pathes and cycles, connectedness, chromatic number, planarity conditions, genus of a graph, the Five Color Theorem. Students should also be aware of Kuratowsky's Theorem, and the Four Color Theorem. If there is time, it is good to do the proof of Kuratowski's Theorem. For more detailed information visit the Math 355 Wiki page.

MATH 362 : (Math-MthEd) Survey of Geometry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 290

DESCRIPTION: Logical and historical development of Euclidean and non-Euclidean geometry, transformations and symmetry; relationships among axiomatic systems; use of software and other geometric models; proofs and Van Hiele levels.

**Course Outcomes**

- Students understand central objects, concepts, relationships, definitions, and theorems of Euclidean geometry, how adolescents come to understand these, and the canonical examples and alternative approaches germane to teaching secondary school geometry.
- Students can communicate geometric ideas effectively using a variety of appropriate representations and can construct valid proofs of geometric theorems within a given axiom system.
- Students understand and can describe the relationships among neutral, Euclidean, and non-Euclidean geometries in terms of fundamental geometric concepts, objects, and properties (particularly parallelism), and can use the fundamental properties of axiom systems and models to provide convincing arguments about these relationships.

MATH 372 : Abstract Algebra 2. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 371

DESCRIPTION: Fields, Galois theory, solvability of polynomials by radicals.

**Course Outcomes**

- Students should achieve mastery of the topics listed in the minimal learning outcomes on the Math 372 Wiki page. This means that they should know all relevant definitions, correct statements of the major theorems (including their hypotheses and limitations), and examples and non-examples of the various concepts. The students should be able to demonstrate their mastery by solving non-trivial problems related to these concepts, and by proving simple (but non-trivial) theorems about the below concepts, related to, but not identical to, statements proven by the text or instructor.

Any 400- or 500-level mathematics courses (except Math 500).

6. Students are required to take either the GRE Mathematics Subject Test or the Mathematics Major Field Test the last semester before they graduate. The tests are ETS (Educational Testing Service) standardized assessment tests of undergraduate mathematics. Go to ETS Math Subject Test or ETS Major Field Tests for a test description and sample problems. These tests do not appear on the transcript or affect the GPA.
7. Students must participate in an exit interview before graduation.

## Recommended Courses

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

: Honors Economic Principles and Problems.

**Course Outcomes**

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.

Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

**Note 1**: The courses recommended above can be used to fill General Education requirements.

**Note 2**: Students who continue toward graduate work should complete Math 372, Math 541, and Math 553.

**Note 3**: Students who do not plan to pursue a Ph.D. in mathematics are strongly encouraged to complete CS 235.

*Hours include courses that may fulfill university core requirements.

## Program Requirements | View MAP | View Program Outcomes

1. Complete the following pre-core requirements before junior year.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 290 : Fundamentals of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Math 112 or concurrent enrollment with instructor's consent.

DESCRIPTION: Achieving maturity in mathematical communication. Introduction to mathematical proof; methods of proof; analysis of proof; induction; logical reasoning.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in mathematical thinking. It is intended as an introduction to mathematical proof, and students who finish the course should achieve maturity in mathematical communication. For more detailed information visit the Math 290 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

MATH 334 : Ordinary Differential Equations. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 113 and Math 313.
DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

MATH 341 : Theory of Analysis 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Math 113 and Math 290.
DESCRIPTION: Rigorous treatment of calculus of a single real variable: topology, order, completeness of real numbers; continuity, differentiability, integrability, and convergence of functions.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the real number system and of real-valued functions of a single real variable, with the focus being on the theoretical and logical foundations of single-variable calculus. A secondary purpose of this course is to reinforce students' prior training in discovering and writing valid mathematical proofs.For more detailed information visit the Math 341 Wiki.

C S 142 : Introduction to Computer Programming. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Knowledge of algebra.
DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

2. Complete the following core requirements during fall semester, junior year:

MATH 320 : Computation and Optimization 1. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: MATH 290 & MATH 313 & MATH 314; concurrent enrollment in Math 321, 334, 344.
DESCRIPTION: A treatment of algorithms used to solve these problems. Topics include complexity and data, approximation theory, recursive algorithms, linear optimization, unconstrained optimization, constrained optimization, global optimization.

**Course Outcomes**

There are no course outcomes available

MATH 321 : Computation and Optimization 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Math 320, 345.

DESCRIPTION: Programming algorithms and using functions to implement the optimization algorithms taught in Math 320. Applications presented. Developing models and applying results of computations to the application domain.

**Course Outcomes**

There are no course outcomes available

MATH 344 : Linear and Nonlinear Analysis 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 290 & MATH 313 & MATH 314; concurrent enrollment in Math 334, 345.

DESCRIPTION: Development of theory of vector spaces, linear maps, inner product spaces, spectral theory, metric space topology, differentiation, contraction mappings and convex analysis.

**Course Outcomes**

There are no course outcomes available

MATH 345 : Linear and Nonlinear Analysis 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Math 344.

DESCRIPTION: Programming algorithms to implement the key mathematical methods taught in Math 344. Applications presented. Developing models and applying results of computations to the application domain.

**Course Outcomes**

There are no course outcomes available

3. Complete the following core requirements during winter semester, junior year:

MATH 322 : Computation and Optimization 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 320; concurrent enrollment in Math 323, 346.

DESCRIPTION: Algorithms used to solve dynamic programming problems and advanced computing problems. Topics include finite-horizon and infinite-horizon dynamic programming, discrete transforms, compressed sensing, heuristics, branch and bound, conditioning and stability.

**Course Outcomes**

There are no course outcomes available

MATH 323 : Computation and Optimization 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 321; concurrent enrollment in Math 322, 347.

DESCRIPTION: Using existing software and writing code for algorithms taught in Math 322. Applications presented. Developing models and applying results to the application domain.

**Course Outcomes**

There are no course outcomes available

MATH 346 : Linear and Nonlinear Analysis 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 344; concurrent enrollment in Math 347.

DESCRIPTION: Theory of Riemann-Darboux integration, calculus on curves and surfaces, complex integration, spectral calculus, generalized inverses of matrices, basic matrix perturbation theory, groups of permutations and matrices. Time permitting, exterior calculus and differential forms.

**Course Outcomes**

There are no course outcomes available

MATH 347 : Linear and Nonlinear Analysis 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 345; concurrent enrollment in Math 346.

DESCRIPTION: Programming algorithms and using functions to implement the mathematical methods taught in Math 346. Applications presented. Developing models and applying results of computations to the

application domain.

**Course Outcomes**

There are no course outcomes available

4. Complete the following core requirements during spring/summer terms, junior year:

MATH 402 : Probability and Statistics 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 322 & MATH 346; concurrent enrollment in Math 403.

DESCRIPTION: Theory of probability and stochastic processes, emphasizing topics used in applications. Random spaces and variables, probability distributions, limit theorems, martingales, diffusion, Markov, Poisson and queuing processes, renewal theory, and information theory.

**Course Outcomes**

There are no course outcomes available

MATH 403 : Probability and Statistics 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: C S 142 & MATH 323 & MATH 347; concurrent enrollment in Math 402.

DESCRIPTION: Using and developing algorithms for the content of Math 402; developing I/O wrappers for numerical libraries. Applications presented. Developing models and applying results of computations.

**Course Outcomes**

There are no course outcomes available

MATH 436 : Differential and Integral Equations 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 322 & MATH 341 & MATH 346; concurrent enrollment in Math 437.

DESCRIPTION: Theory and applicatiions of dynamic systems and partial differential equations. Topics include dynamic systems; bifurcation theory; control theory; hyperbolic, parabolic, and elliptic partial differential equations; commonly-used algorithms.

**Course Outcomes**

There are no course outcomes available

MATH 437 : Differential and Integral Equations 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: C S 142 & MATH 323 & MATH 347; concurrent enrollment in Math 436.

DESCRIPTION: Using and developing software to implement the content of Math 436. Developing models and applying results of computations to several application domains. Introduction to parallel computation.

**Course Outcomes**

There are no course outcomes available

5. Complete the following core requirements during winter semester, senior year:

MATH 404 : Probability and Statistics 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 402; concurrent enrollment in Math 405.

DESCRIPTION: First course in mathematical statistics, focusing on mathematical aspects. Topics include estimation, inference, analysis of variance, regression, multivariate statistics, Bayesian statistics, state estimation, Kalman filtering, time series, GARCH models.

**Course Outcomes**

There are no course outcomes available

MATH 405 : Probability and Statistics 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 403; concurrent enrollment in Math 404.

DESCRIPTION: Using and developing software to implement the content of Math 404 and handle large data sets. Applications presented. Designing and executing statistical tests and applying computations to application domains.

**Course Outcomes**

There are no course outcomes available

MATH 438 : Differential and Integral Equations 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 402 & MATH 436; concurrent enrollment in Math 404, 439.

DESCRIPTION: Introduction to integral equations, calculus of variations, stochastic differential equatons, optimal stochastic control; common algorithms used for these systems.

**Course Outcomes**

There are no course outcomes available

MATH 439 : Differential and Integral Equations 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 437; concurrent enrollment in Math 405, 438.

DESCRIPTION: Using and developing software for problems in the calculus of variations, stochastic differential equations, and stochastic optimal control. Developing models and applying the results of computations to several application domains.

**Course Outcomes**

There are no course outcomes available

6. Students are required to complete a concentration in an area to which the mathematical and computational tools that they are learning can be applied. The list of the Approved Concentrations is found at http://math.byu.edu/concentrations.

*Hours include courses that may fulfill university core requirements.

## Program Requirements

1. Grades of C- or below will not be accepted.
2. Complete the following courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 290 : Fundamentals of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 112 or concurrent enrollment with instructor's consent.
DESCRIPTION: Achieving maturity in mathematical communication. Introduction to mathematical proof; methods of proof; analysis of proof; induction; logical reasoning.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in mathematical thinking. It is intended as an introduction to mathematical proof, and students who finish the course should achieve maturity in mathematical communication. For more detailed information visit the Math 290 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

3. Complete one course from the following:

MATH 302 : Mathematics for Engineering 1. (4:4:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 113.
DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

MATH 314 : Calculus of Several Variables. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

4. Complete one course from the following:

MATH 303 : Mathematics for Engineering 2. (4:4:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 302
DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MATH 334 : Ordinary Differential Equations. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 113 and Math 313.
DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

MATH 341 : Theory of Analysis 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Math 113 and Math 290.
DESCRIPTION: Rigorous treatment of calculus of a single real variable: topology, order, completeness of real numbers; continuity, differentiability, integrability, and convergence of functions.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the real number system and of real-valued functions of a single real variable, with the focus being on the theoretical and logical foundations of single-variable calculus. A secondary purpose of this course is to reinforce students' prior training in discovering and writing valid mathematical proofs.For more detailed information visit the Math 341 Wiki.

MATH 342 : Theory of Analysis 2. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 313 & MATH 341
DESCRIPTION: Rigorous treatment of calculus of several real variables; metric spaces, geometry and topology of

Euclidean space, differentiation implicity function theorem, integration on sets and manifolds.

**Course Outcomes**

- Math 342 is the multivariable sequel to Math 341. Itprovides a rigorous treatment of multivariable calculus. Unlike the case with Math 341, Math 342 students are not required to have had an introductory course in the subject matter, so Math 342 needs to treat both computation and theory in some depth.For more detailed information visit the Math 342 Wiki entry.

MATH 352 : Introduction to Complex Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 290; Math 341 or concurrent enrollment.

DESCRIPTION: Complex algebra, analytic functions, integration in the complex plane, infinite series, theory of residues, conformal mapping.

**Course Outcomes**

- This course is aimed at graduates majoring in mathematical and physical sciences and engineering. In addition to being an important branch of mathematics in its own right, complex analysis is an important tool for differential equations (ordinary and partial), algebraic geometry and number theory. Thus it is a core requirement for all mathematics majors. It contributes to all the expected learning outcomes of the Mathematics BS degree.For more detailed information visit the Math 352 Wiki page.
- Students will master complex numbers, limits, analytic functions, elementary functions in the complex plane, contour integrals, Taylor series, Laurent series, isolated singularities, residue theory and applications, and conformal mappings.

MATH 355 : Graph Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 313

DESCRIPTION: Maps, graphs and digraphs, coloring problems, applications.

**Course Outcomes**

- Graphs, trees, pathes and cycles, connectedness, chromatic number, planarity conditions, genus of a graph, the Five Color Theorem. Students should also be aware of Kuratowsky's Theorem, and the Four Color Theorem. If there is time, it is good to do the proof of Kuratowski's Theorem. For more detailed information visit the Math 355 Wiki page.

MATH 362 : (Math-MthEd) Survey of Geometry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 290

DESCRIPTION: Logical and historical development of Euclidean and non-Euclidean geometry, transformations and symmetry; relationships among axiomatic systems; use of software and other geometric models; proofs and Van Hiele levels.

**Course Outcomes**

- Students understand central objects, concepts, relationships, definitions, and theorems of Euclidean geometry, how adolescents come to understand these, and the canonical examples and alternative approaches germane to teaching secondary school geometry.
- Students can communicate geometric ideas effectively using a variety of appropriate representations and can construct valid proofs of geometric theorems within a given axiom system.
- Students understand and can describe the relationships among neutral, Euclidean, and non-Euclidean geometries in terms of fundamental geometric concepts, objects, and properties (particularly parallelism), and can use the fundamental properties of axiom systems and models to provide convincing arguments about these relationships.

MATH 371 : Abstract Algebra 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 290 & MATH 313

DESCRIPTION: Groups, group homomorphisms, rings, ideals, and polynomials.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in abstract algebra. In addition to being an important branch of mathematics in its own right, abstract algebra is now an essential tool in number theory, geometry, topology, and, to a lesser extent, analysis. Thus it is a core requirement for all mathematics majors. Outside of mathematics, algebra also has applications in cryptography, coding theory, quantum chemistry, and physics. For more detailed information visit the Math 371 Wiki page.

MATH 372 : Abstract Algebra 2. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 371

DESCRIPTION: Fields, Galois theory, solvability of polynomials by radicals.

**Course Outcomes**

- Students should achieve mastery of the topics listed in the minimal learning outcomes on the Math 372 Wiki page. This means that they should know all relevant definitions, correct statements of the major theorems (including their hypotheses and limitations), and examples and non-examples of the various concepts. The students should be able to demonstrate their mastery by solving non-trivial problems

related to these concepts, and by proving simple (but non-trivial) theorems about the below concepts, related to, but not identical to, statements proven by the text or instructor.

or any 400- or 500-level mathematics course of three credit hours or more except Math 495R, 499R, or 500.

*Hours include courses that may fulfill university core requirements.

## Undergraduate Courses

**Note:** for courses containing material preparatory to Math 97 (up through beginning algebra) please refer to Independent Study.

MATH 097 : Intermediate Algebra. (0:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: High school algebra.

DESCRIPTION: Elementary logic, real number system, equations and inequalities (linear, polynomial, rational, and radical expressions), graphing, function notation, inverse function, exponential functions, systems of equations, variations.

NOTE: Fee.

**Course Outcomes**

- This course is not offered on BYU campus, but is available only through BYU Independent Study.Elementary logic, real number system, equations and inequalities (linear, polynomial, rational, and radical expressions), graphing, function notation, inverse functions, exponential functions, systems of equations, variations. 56 lessons, 2 assignment submissions, all instructor-graded; 4 proctored midcourse exams, all computer-graded Speedback; proctored computer-graded final exam.For more detailed information, visit the Math 97 Independent Study website.

### 100-Level Courses

MATH 102 : Quantitative Reasoning. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Practicing and applying quantitative reasoning: personal finance, consumer statistics, etc.

NOTE: For students who do not need developmental algebra for subsequent courses.

**Course Outcomes**

- For students who do not need developmental algebra for subsequent courses. For more detailed information, visit the Math 102 Wiki page.

MATH 110 : College Algebra. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 97 or equivalent (see Independent Study).

DESCRIPTION: Functions, polynomials, theory of equations, exponential and logarithmic functions, matrices, systems of linear equations, permutations, combinations, binomial theorem.

**Course Outcomes**

- Graph functions using horizontal and vertical shiftsGraph functions using compressions and stretchesGraph functions using reflections about the x-axis or y-axisForm composite functions and find the domainDetermine the inverse of a function and graph an inverse function from the graph of a function
- This course prepares students to take courses in calculus, statistics, mathematics for elementary education majors, and other areas where algebra skills are required. Fluent skills in algebra are necessary for success in any area that uses mathematical analysis. The mastery of college algebra requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. College Algebra develops the concepts of graphing functions, polynomial and rational functions, exponential and logarithmic functions, conic sections, solving systems of equations, the binomial theorem, permutations, combinations, and probability. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information, visit the Math 110 Wiki page.
- Quadratic functionsPolynomial functionsRational functionsPolynomial and rational inequalitiesThe real zeros of a polynomial functionComplex zeros and the Fundamental Theorem of Algebra
- Exponential functionsLogarithmic functionsProperties of LogarithmsLogarithmic and exponential equationsCompound interestExponential growth and decay
- Graph parabolas, ellipses, and hyperbolasFind the equation of parabolas, ellipses, and hyperbolasDiscuss the equation of conic sections to find vertices, foci, asymptotes, and the directrixWork with conic sections that are not centered at the origin
- Solve systems of linear equations using substitution and eliminationSolve systems of non-linear equations using substitution and eliminationDecompose rational functions using partial fractions
- Find terms in a sequence using a formula and a recursive definitionFind a formula for terms in an arithmetic sequence and be able to add the terms of a finite arithmetic sequenceFind a formula for the terms in a geometric sequence and be able to find the sum of finite and infinite geometric seriesProve statements using mathematical induction

- Work with operations on sets such as union, intersection and complement and count the number of elements in a setCompute permutations and combinationsEvaluate binomial coefficients and expand binomials using the Binomial TheoremCompute probabilities of equally likely outcomes

MATH 111 : Trigonometry. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 or equivalent.

DESCRIPTION: Circular functions, triangle relationships, identities, inverse trig functions, trigonometric equations, vectors, complex numbers, DeMoivre's theorem.

**Course Outcomes**

- Students should gain familiarity and proficiency with the basic theorems of trigonometry.For more detailed information, visit the Math 111 Wiki page.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 116 : Essentials of Calculus. (1:2:0)

WHEN TAUGHT: Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Review of algebra, graph of line, slope. Limits and derivatives (standard functions, compositions of such functions), derivative for polynomials, exponentials, logarithms. Product, quotient and chain rule. Optimization (extrema), application to business problems. Newton's method.

**Course Outcomes**

- Students receive a brief overview of differential calculus. Topics covered include limits, derivatives, and applications of differentiation to optimization of functions.For more detailed information visit the Math 116 Wiki page.

MATH 118 : Finite Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Language of set theory, counting and combinations. Probability theory, elementary stochastic processes, conditional probabilities. Repeated experiments, random variables, expectation, variance, linear equations, matrix algebra, application to economics or similar. Linear programming. Markov chains including applications.

**Course Outcomes**

- Prepares students for a broad range of applications in business, the life sciences, and the social sciences.For more detailed information visit the Math 118 Wiki page.

MATH 119 : Introduction to Calculus. (4:4:1)

OFFERED: Independent Study only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 and Math 111; or equivalent.

DESCRIPTION: Introduction to plane analytic geometry and calculus.

**Course Outcomes**

- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

MATH 191 : Seminar in Mathematics 1. (.5:1:0)

WHEN TAUGHT: Fall

RECOMMENDED: Math 113.

DESCRIPTION: Careers, topics, and problems in mathematics.

**Course Outcomes**

There are no course outcomes available

### 200-Level Courses

MATH 222 : Seminar in Mathematics 2. (.5:1:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: MATH 191

DESCRIPTION: Careers, topics, and problems in mathematics. Use of Maple, Mathematica, and TeX in mathematics.

**Course Outcomes**

- Scholarships, undergraduate research, departmental activities, and summer programs available to BYU mathematics majors.Career options available to mathematics majors;Several current research topics in mathematics; andAspects of the culture of the mathematics community.

MATH 290 : Fundamentals of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Math 112 or concurrent enrollment with instructor's consent.

DESCRIPTION: Achieving maturity in mathematical communication. Introduction to mathematical proof; methods of proof; analysis of proof; induction; logical reasoning.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in mathematical thinking. It is intended as an introduction to mathematical proof, and students who finish the course should achieve maturity in mathematical communication. For more detailed information visit the Math 290 Wiki page.

### 300-Level Courses

MATH 300 : (Math-MthEd) History and Philosophy of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Math 113.

DESCRIPTION: Historical development of important mathematical ideas and philosophies; implications for the mathematical curriculum.

**Course Outcomes**

- Students understand and can describe the major approaches—cultural, philosophical, and psychological—to explaining the origin and nature of mathematics and its relation to understanding and modeling the physical world.
- Students understand and can describe the major historical periods of development of mathematical thought, as well as the contributions of various cultures and individuals within those periods.
- Students understand and can describe the historical development of concepts and practices central to school mathematics, including numeration, arithmetic, algebra, geometry, calculus, and probability.
- Through understanding the complex relationship between mathematical practices and human experience, students appreciate the complexity of teaching and learning mathematics and the different approaches and experiences adolescents will bring to learning those practices.

MATH 302 : Mathematics for Engineering 1. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Math 113.

DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 302

DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

RECOMMENDED: Math 290.

DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

: Honors Elementary Linear Algebra. (3:3:1)

**Course Outcomes**

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 313.

DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

MATH 320 : Computation and Optimization 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 290 & MATH 313 & MATH 314; concurrent enrollment in Math 321, 334, 344.

DESCRIPTION: A treatment of algorithms used to solve these problems. Topics include complexity and data, approximation theory, recursive algorithms, linear optimization, unconstrained optimization, constrained optimization, global optimization.

**Course Outcomes**

There are no course outcomes available

MATH 321 : Computation and Optimization 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Math 320, 345.

DESCRIPTION: Programming algorithms and using functions to implement the optimization algorithms taught in Math 320. Applications presented. Developing models and applying results of computations to the application domain.

**Course Outcomes**

There are no course outcomes available

MATH 322 : Computation and Optimization 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 320; concurrent enrollment in Math 323, 346.

DESCRIPTION: Algorithms used to solve dynamic programming problems and advanced computing problems. Topics include finite-horizon and infinite-horizon dynamic programming, discrete transforms, compressed sensing, heuristics, branch and bound, conditioning and stability.

**Course Outcomes**

There are no course outcomes available

MATH 323 : Computation and Optimization 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 321; concurrent enrollment in Math 322, 347.

DESCRIPTION: Using existing software and writing code for algorithms taught in Math 322. Applications presented. Developing models and applying results to the application domain.

**Course Outcomes**

There are no course outcomes available

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 113 and Math 313.

DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

MATH 341 : Theory of Analysis 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Math 113 and Math 290.

DESCRIPTION: Rigorous treatment of calculus of a single real variable: topology, order, completeness of real numbers; continuity, differentiability, integrability, and convergence of functions.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the real number system and of real-valued functions of a single real variable, with the focus being on the theoretical and logical foundations of single-variable calculus. A secondary purpose of this course is to reinforce students' prior training in discovering and writing valid mathematical proofs.For more detailed information visit the Math 341 Wiki.

MATH 342 : Theory of Analysis 2. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 313 & MATH 341

DESCRIPTION: Rigorous treatment of calculus of several real variables; metric spaces, geometry and topology of Euclidean space, differentiation implicity function theorem, integration on sets and manifolds.

**Course Outcomes**

- Math 342 is the multivariable sequel to Math 341. Itprovides a rigorous treatment of multivariable calculus. Unlike the case with Math 341, Math 342 students are not required to have had an introductory course in the subject matter, so Math 342 needs to treat both computation and theory in some depth.For more detailed information visit the Math 342 Wiki entry.

MATH 344 : Linear and Nonlinear Analysis 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 290 & MATH 313 & MATH 314; concurrent enrollment in Math 334, 345.

DESCRIPTION: Development of theory of vector spaces, linear maps, inner product spaces, spectral theory, metric space topology, differentiation, contraction mappings and convex analysis.

**Course Outcomes**

There are no course outcomes available

MATH 345 : Linear and Nonlinear Analysis 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Math 344.

DESCRIPTION: Programming algorithms to implement the key mathematical methods taught in Math 344. Applications presented. Developing models and applying results of computations to the application domain.

**Course Outcomes**

There are no course outcomes available

MATH 346 : Linear and Nonlinear Analysis 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 344; concurrent enrollment in Math 347.

DESCRIPTION: Theory of Riemann-Darboux integration, calculus on curves and surfaces, complex integration, spectral calculus, generalized inverses of matrices, basic matrix perturbation theory, groups of permutations and matrices. Time permitting, exterior calculus and differential forms.

**Course Outcomes**

There are no course outcomes available

MATH 347 : Linear and Nonlinear Analysis 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 345; concurrent enrollment in Math 346.

DESCRIPTION: Programming algorithms and using functions to implement the mathematical methods taught in Math 346. Applications presented. Developing models and applying results of computations to the application domain.

**Course Outcomes**

There are no course outcomes available

MATH 352 : Introduction to Complex Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 290; Math 341 or concurrent enrollment.

DESCRIPTION: Complex algebra, analytic functions, integration in the complex plane, infinite series, theory of residues, conformal mapping.

**Course Outcomes**

- This course is aimed at graduates majoring in mathematical and physical sciences and engineering. In addition to being an important branch of mathematics in its own right, complex analysis is an important tool for differential equations (ordinary and partial), algebraic geometry and number theory. Thus it is a core requirement for all mathematics majors. It contributes to all the expected learning outcomes of the Mathematics BS degree.For more detailed information visit the Math 352 Wiki page.
- Students will master complex numbers, limits, analytic functions, elementary functions in the complex plane, contour integrals, Taylor series, Laurent series, isolated singularities, residue theory and applications, and conformal mappings.

MATH 355 : Graph Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 313

DESCRIPTION: Maps, graphs and digraphs, coloring problems, applications.

**Course Outcomes**

- Graphs, trees, pathes and cycles, connectedness, chromatic number, planarity conditions, genus of a graph, the Five Color Theorem. Students should also be aware of Kuratowsky's Theorem, and the Four Color Theorem. If there is time, it is good to do the proof of Kuratowski's Theorem. For more detailed information visit the Math 355 Wiki page.

MATH 362 : (Math-MthEd) Survey of Geometry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 290

DESCRIPTION: Logical and historical development of Euclidean and non-Euclidean geometry, transformations and symmetry; relationships among axiomatic systems; use of software and other geometric models; proofs and Van Hiele levels.

**Course Outcomes**

- Students understand central objects, concepts, relationships, definitions, and theorems of Euclidean geometry, how adolescents come to understand these, and the canonical examples and alternative approaches germane to teaching secondary school geometry.
- Students can communicate geometric ideas effectively using a variety of appropriate representations and can construct valid proofs of geometric theorems within a given axiom system.
- Students understand and can describe the relationships among neutral, Euclidean, and non-Euclidean geometries in terms of fundamental geometric concepts, objects, and properties (particularly parallelism), and can use the fundamental properties of axiom systems and models to provide convincing arguments about these relationships.

MATH 371 : Abstract Algebra 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 290 & MATH 313

DESCRIPTION: Groups, group homomorphisms, rings, ideals, and polynomials.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in abstract algebra. In addition to being an important branch of mathematics in its own right, abstract algebra is now an essential tool in number theory, geometry, topology, and, to a lesser extent, analysis. Thus it is a core requirement for all mathematics majors. Outside of mathematics, algebra also has applications in cryptography, coding theory, quantum chemistry, and physics. For more detailed information visit the Math 371 Wiki page.

MATH 372 : Abstract Algebra 2. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 371

DESCRIPTION: Fields, Galois theory, solvability of polynomials by radicals.

**Course Outcomes**

- Students should achieve mastery of the topics listed in the minimal learning outcomes on the Math 372 Wiki page. This means that they should know all relevant definitions, correct statements of the major theorems

(including their hypotheses and limitations), and examples and non-examples of the various concepts. The students should be able to demonstrate their mastery by solving non-trivial problems related to these concepts, and by proving simple (but non-trivial) theorems about the below concepts, related to, but not identical to, statements proven by the text or instructor.

MATH 391R : Seminar in Mathematics. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Topics from classical problems of antiquity, combinatorial mathematics, graph theory, real functions, number theory, functional equations.

**Course Outcomes**

- Specified by the instructor on a case-by-case basis. Topics may be drawn from any area of mathematics. Typical topics include the Putnam Examination, dynamic systems, combinatorial mathematics, graph theory, real functions, number theory, functional equations, etc.

MATH 393 : Survey of Advanced Mathematics. (.5:1:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Majors only.

DESCRIPTION: A series of lectures designed to give students an overview of active research areas in advanced mathematics.

**Course Outcomes**

No outcomes are available at this time.

MATH 399R : Academic Internship. (.5-9:9:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: On-the-job experience.

**Course Outcomes**

- To be defined by the professor on a case-by-case basis. In general, via the internship the student should obtain additional mathematical knowledge, and/or apply non-trivial mathematical techniques in creative ways.

### 400-Level Courses

MATH 402 : Probability and Statistics 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 322 & MATH 346; concurrent enrollment in Math 403.

DESCRIPTION: Theory of probability and stochastic processes, emphasizing topics used in applications. Random spaces and variables, probability distributions, limit theorems, martingales, diffusion, Markov, Poisson and queuing processes, renewal theory, and information theory.

**Course Outcomes**

There are no course outcomes available

MATH 403 : Probability and Statistics 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: C S 142 & MATH 323 & MATH 347; concurrent enrollment in Math 402.

DESCRIPTION: Using and developing algorithms for the content of Math 402; developing I/O wrappers for numerical libraries. Applications presented. Developing models and applying results of computations.

**Course Outcomes**

There are no course outcomes available

MATH 404 : Probability and Statistics 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 402; concurrent enrollment in Math 405.

DESCRIPTION: First course in mathematical statistics, focusing on mathematical aspects. Topics include estimation, inference, analysis of variance, regression, multivariate statistics, Bayesian statistics, state estimation, Kalman filtering, time series, GARCH models.

**Course Outcomes**

There are no course outcomes available

MATH 405 : Probability and Statistics 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 403; concurrent enrollment in Math 404.

DESCRIPTION: Using and developing software to implement the content of Math 404 and handle large data sets. Applications presented. Designing and executing statistical tests and applying computations to application domains.

**Course Outcomes**

There are no course outcomes available

MATH 406R : Topics in Mathematics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Topics selected from various aspects of mathematics. Possibilities include, but are not limited to, combinatorial theory, factorization and primality testing, game theory, harmonic analysis, hyperbolic geometry, linear programming, Lie groups, p-adic numbers, set theory and mathematical logic stochastic processes, supply chain management, voting theory.

**Course Outcomes**

No outcomes are available at this time.

MATH 410 : Introduction to Numerical Methods. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 314; C S 142 or equivalent.

DESCRIPTION: Root finding, interpolation, curve fitting, numerical differentiation and integration, multiple integrals, direct solvers for linear systems, least squares, rational approximations, Fourier and other orthogonal methods.

**Course Outcomes**

- Root finding, interpolation, curve fitting, numerical differentiation and integration, multiple integrals, direct solvers for linear systems, least squares, rational approximations, Fourier and other orthogonal methods. [This official course description appears to differ with current standard practice, in that iterative solvers of linear systems are taught in this course, while "Fourier and other orthogonal methods" are postponed until Math 411.] For more detailed information visit the Math 410 Wiki page.
- Students will master numerical solution of equations of one variable, interpolation, numerical differentiation, numerical integration, and numerical solution of linear systems.

MATH 411 : Numerical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 334

DESCRIPTION: Iterative solvers for linear systems, eigenvalue, eigenvector approximations, numerical solutions to nonlinear systems, numerical techniques for initial and boundary value problems, elementary solvers for PDEs.

**Course Outcomes**

- Students should be able to describe, derive, and implement the numerical methods listed on the Math 411 Wiki page. They should be able to explain the advantages and disadvantages of each method. They should understand error analysis and be able to make practical decisions based on the outcomes of that analysis.

MATH 425 : Mathematical Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 112

DESCRIPTION: Using tools in mathematics to help biologists. Motivating new mathematics with questions in biology.

**Course Outcomes**

- Students should gain a familiarity with how the disciplines of mathematics and biology can complement each other. Increasingly, mathematics is used to understand complexbiological systems. Without some familiarity with the mathematicaltechniques, it is difficult to know how to interpret the results. Inthis class a variety of applications to medicine and biology will bestudied, highlighting the different mathematical techniques. Theobjective of the class is not only to introduce the students tovarious applications and methods but also to help determine the strengthsand weaknesses of different methods. For more detailed information visit the Math 425 Wiki page.

MATH 431 : (Math - EC En 370) Probability Theory. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: MATH 313

DESCRIPTION: Axiomatic probability theory, conditional probability, discrete / continuous random variables, expectation, conditional expectation, moments, functions of random variables, multivariate distributions, laws of large numbers, central limit theorem.

**Course Outcomes**

There are no course outcomes available

MATH 435 : Mathematical Finance. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: MATH 431; or STAT 370

DESCRIPTION: The binomial asset pricing model (discrete probability). Martingales, pricing of derivative securities, random walk in financial models, random interest rates.

**Course Outcomes**

- The minimal expectation for this course is that students learn about mathematical financein the context of

discrete time and finite state-spaces.It is therefore not required that students be taught about Brownian motion, the Black-Scholes model, etc. For more detailed information visit the Math 435 Wiki page.

MATH 436 : Differential and Integral Equations 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 322 & MATH 341 & MATH 346; concurrent enrollment in Math 437.

DESCRIPTION: Theory and applicatiions of dynamic systems and partial differential equations. Topics include dynamic systems; bifurcation theory; control theory; hyperbolic, parabolic, and elliptic partial differential equations; commonly-used algorithms.

**Course Outcomes**

There are no course outcomes available

MATH 437 : Differential and Integral Equations 1 Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: C S 142 & MATH 323 & MATH 347; concurrent enrollment in Math 436.

DESCRIPTION: Using and developing software to implement the content of Math 436. Developing models and applying results of computations to several application domains. Introduction to parallel computation.

**Course Outcomes**

There are no course outcomes available

MATH 438 : Differential and Integral Equations 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 402 & MATH 436; concurrent enrollment in Math 404, 439.

DESCRIPTION: Introduction to integral equations, calculus of variations, stochastic differential equatons, optimal stochastic control; common algorithms used for these systems.

**Course Outcomes**

There are no course outcomes available

MATH 439 : Differential and Integral Equations 2 Laboratory. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 437; concurrent enrollment in Math 405, 438.

DESCRIPTION: Using and developing software for problems in the calculus of variations, stochastic differential equations, and stochastic optimal control. Developing models and applying the results of computations to several application domains.

**Course Outcomes**

There are no course outcomes available

MATH 447 : Introduction to Partial Differential Equations. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: MATH 303; or MATH 314 & MATH 334

DESCRIPTION: Boundary value problems; transform methods; Fourier series; Bessel functions; Legendre polynomials.

**Course Outcomes**

- The main purpose of this course is to teach students how to solve the canonical linear second-order partial differential equations on simple domains. Secondarily, students should be introduced to the theory concerning the validity of such solutions.For more detailed information visit the Math 447 Wiki page.

MATH 450 : Combinatorics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 371

DESCRIPTION: Permutations, combinations, recurrence relations, applications.

**Course Outcomes**

- Permutations and combinations basics, including the Pigeonhole Principle, binomial coefficients and the Binomial Theorem, Stirling's Approximation, Inclusion/exclusion, Generating functions and recurrence relations (rational functions), Groups, permutations and counting problems -- Polya's Theorem. For more detailed information visit the Math 450 Wiki page.

MATH 451 : Introduction to Topology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 341

DESCRIPTION: Developing topological concepts, beginning from a linear setting. Developing proofs or counterexamples from axioms to a structured sequence of topological propositions using only notes provided.

**Course Outcomes**

- Developing topological concepts, beginning from a linear setting. Developing proofs or counterexamples from axioms to a structured sequence of topological propositions using only notes provided. For more detailed information visit the Math 451 Wiki page.

MATH 465 : Differential Geometry. (3:3:0)

PREREQUISITE: MATH 314; Math 341 or equivalent.

RECOMMENDED: Math 342 or equivalent.

DESCRIPTION: Geometry of smooth curves and surfaces. Topics include the first and second fundamental forms, the Gauss map, orientability of surfaces, Gaussian and mean curvature, geodesics, minimal surfaces and the Gauss-Bonnet Theorem.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the geometry of curves and surfaces, with the focus being on the theoretical and logical foundations of differential geometry. For more detailed information visit the Math 465 Wiki page.

MATH 473 : Group Representation Theory. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: MATH 371

DESCRIPTION: FG-modules; Maschke's theorem; Schur's lemma; characters of groups; orthogonality relations of characters; induced, lifted and restricted characters; construction of character tables; Burnside's theorem.

**Course Outcomes**

- Students should know all relevant definitions, correct statements of the major theorems (including their hypotheses and limitations), and examples and non-examples of the various concepts The students should be able to demonstrate their mastery by solving non-trivial problems related to these concepts, and by proving simple (but non-trivial) theorems about the below concepts, related to, but not identical to, statements proven by the text or instructor. For more detailed information visit the Math 473 Wiki page.

MATH 485 : Mathematical Cryptography. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 313

RECOMMENDED: Math 371.

DESCRIPTION: A mathematical introduction to some of the high points of modern cryptography.

**Course Outcomes**

- Students should know the definitions, being familiar with standard examples, and being able to solve mathematical and algorithmic problems by directly using the material taught in the course. This includes appropriate use of Maple, Mathematica, or another appropriate computing language. For more detailed information visit the Math 485 Wiki page.

MATH 487 : Number Theory. (3:3:0)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 371

DESCRIPTION: Foundations; congruences; quadratic reciprocity; unique factorization, prime distribution or Diophantine equations.

**Course Outcomes**

- Students should know all relevant definitions, correct statements of the major theorems (including their hypotheses and limitations), and examples and non-examples of the various concepts The students should be able to demonstrate their mastery by solving non-trivial problems related to these concepts, and by proving simple (but non-trivial) theorems about the below concepts, related to, but not identical to, statements proven by the text or instructor. For more detailed information visit the Math 487 Wiki page.

MATH 495R : Readings in Mathematics. (.5-2:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Directed readings beyond the scope of usual undergraduate courses.

**Course Outcomes**

- To be defined by the professor on a case-by-case basis. In general, a significant, coherent set of readings will be defined, and the student's base of mathematical knowledge and expertise will increase in notable, measurable ways.

MATH 499R : Senior Thesis. (.5-3:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- The student will complete a strong Senior Thesis which is compatible with the policies of the Honors Program and meets the standards set by the student's thesis advisor.

## 500-Level Graduate Courses (available to advanced undergraduates)

MATH 500 : (Math-Chem-C S-Geol-MthEd-Phscs-Stat) Business Career Essentials in Science and Math. (1.5:1.5:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills necessary to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.
- Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

MATH 510 : Numerical Methods for Linear Algebra. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Math 410 or equivalent.

DESCRIPTION: Numerical matrix algebra, orthogonalization and least squares methods, unsymmetric and symmetric eigenvalue problems, iterative methods, advanced solvers for partial differential equations.

**Course Outcomes**

- This course is designed to prepare students to solve linear algebra problems arising from many applications such as mathematical models of physical or engineering processes. Students are introduced to modern concepts and methodologies in numerical linear algebra, with particular emphasis on t methods that can be used to solve very large scale problems. In depth discussion of theoretical aspects such as stability and convergence will be used to enhance student understanding of the numerical methods. Students will also be required to perform some programming and computation so as to gain experience in implementing and observing the numerical performance of the various numerical methods.The course addresses the University goal of developing the skills of sound thinking, effective communication and quantitative reasoning. The course also allow students, especially undergraduate students, to develop some depth and consequently competence in an important area of applied mathematics.This course requires knowledge of higher level courses in mathematics. The course also serves as an introductory graduate level course to prepare the students to apply the methods learned in their research projects. For more detailed information visit the Math 510 Wiki page.

MATH 511 : Numerical Methods for Partial Differential Equations. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Math 303 or 447; 410; or equivalents.

DESCRIPTION: Finite difference and finite volume methods for partial differential equations. Stability, consistency, and convergence theory.

**Course Outcomes**

- This course is designed to prepare students to solve mathematical models represented by initial or boundary value problems involving partial differential equations that cannot be solved directly using standard mathematical techniques but are amenable to a computational approach. Numerical solution of partial differential equations has important applications in many application areas. Students are introduced to the discretization methodologies, with particular emphasis on the finite difference method, that allows the construction of accurate and stable numerical schemes. In depth discussion of theoretical aspects such as stability analysis and convergence will be used to enhance the students' understanding of the numerical methods. Students will also be required to perform some programming and computation so as to gain experience in implementing the schemes and to be able to observe the numerical performance of the various numerical methods.The course addresses the University goal of developing the skills of sound thinking, effective communication and quantitative reasoning. The course also allow students, especially undergraduate students, to develop some depth and consequently competence in an important area of applied mathematics.This course requires knowledge of higher level courses in mathematics and serves as an introductory graduate level course to prepare the students to apply the methods learned in their research projects.

MATH 513R : Advanced Topics in Applied Mathematics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

**Course Outcomes**

- Students should gain a familiarity with a particular area of applied mathematics selected by the instructor. In general, a significant, coherent set of readings will be defined, and the student's base of mathematical knowledge and expertise will increase in notable, measurable ways. The students is expected to demonstrate mastery of the material in a manner that is acceptable to the professor.

MATH 521 : Methods of Applied Mathematics 1. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 334 or equivalent.

DESCRIPTION: Possible topics include variational, integral, and partial differential equations; spectral and transform methods; nonlinear waves; Green's functions; scaling and asymptotic analysis; perturbation theory; continuum mechanics.

**Course Outcomes**

- The object of this course is to familiarize students with classical techniques in applied mathematics and demonstrate their application to specific problems. Possible topics include variational, integral, and partial differential equations; spectral and transform methods; nonlinear waves; Green's functions; scaling and asymptotic analysis; perturbation theory; continuum mechanics. For more detailed information visit the Math 521 Wiki page.

MATH 522 : Methods of Applied Mathematics 2. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 521 or equivalent.

DESCRIPTION: Possible topics include variational, integral, and partial differential equations; spectral and transform methods; nonlinear waves; Green's functions; scaling and asymptotic analysis; perturbation theory; continuum mechanics.

**Course Outcomes**

- The object of this course is to familiarize students with classical techniques in applied mathematics and demonstrate their application to specific problems. Possible topics include variational, integral, and partial differential equations; spectral and transform methods; nonlinear waves; Green's functions; scaling and asymptotic analysis; perturbation theory; continuum mechanics. For more detailed information visit the Math 522 Wiki page.

MATH 532 : Complex Analysis. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 352 or instructor's consent.

DESCRIPTION: Introduction to theory of complex analysis at beginning graduate level. Topics: Cauchy integral equations, Riemann surfaces, Picard's theorem, etc.

**Course Outcomes**

- Students should be familiar with the minimal learning outcomes listed on the Math 532 Math Wiki page. They should know the technical terms, and be able to implement the methods taught in the course to work associated problems, including proving simple results.

MATH 534 : Introduction to Dynamical Systems 1. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: Math 334, 341; or equivalents.

DESCRIPTION: Discrete dynamical systems; iterations of maps on the line and the plane; bifurcation theory; chaos, Julia sets, and fractals. Computational experimentation.

**Course Outcomes**

- Discrete dynamical systems; iterations of maps on the line and the plane; bifurcation theory; chaos, Julia sets, and fractals. Computational experimentation.

MATH 540 : Linear Analysis. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: Math 342 or equivalent.

DESCRIPTION: Normed vector spaces and linear maps between them.

**Course Outcomes**

- Students should obtain a thorough understanding of the topics listed on the Math 540 Wiki page. In particular they should be able to define and use relevant terminology, compare and contrast closely-related concepts, and state (and, where feasible, prove) major theorems.

MATH 541 : Real Analysis. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Math 341; 314 or 342; or equivalents.

DESCRIPTION: Rigorous treatment of differentiation and integration theory; Lebesque measure; Banach spaces.

**Course Outcomes**

- Students should understand the topics outlined in the minimal learning outcomes on the Math 541 Wiki page. As evidence of that understanding, students should be able to demonstrate mastery of all relevant vocabulary, familiarity with common examples and counterexamples, knowledge of the content of the major theorems, understanding of the ideas in their proofs, and ability to make direct application of those results to related problems.

MATH 543 : Advanced Probability 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Math 314 and Math 341; and Math 431 or Stat 370.

DESCRIPTION: Foundations of the modern theory of probability with applications. Probability spaces, random variables, independence, conditioning, expectation, generating functions, and Markov chains.

**Course Outcomes**

- Students should understand the topics listed in the minimal learning outcomes on the Math 543 Wiki page. As evidence of that understanding, students should be able to demonstrate mastery of all relevant vocabulary, familiarity with common examples and counterexamples, knowledge of the content of the major theorems, understanding of the ideas in their proofs, and ability to make direct application of those results to related problems.

MATH 544 : Advanced Probability 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 543

RECOMMENDED: Math 341, 342, 431; or equivalents.

DESCRIPTION: Advanced concepts in modern probability. Convergence theorems and laws of large numbers. Stationary processes and ergodic theorems. Martingales. Diffusion processes and stochastic integration.

**Course Outcomes**

- Students should understand the topics outlined in the minimal learning outcomes on theMath 544 Wiki page. As evidence of that understanding, students should be able to demonstrate mastery of all relevant vocabulary, familiarity with common examples and counterexamples, knowledge of the content of the major theorems, understanding of the ideas in their proofs, and ability to make direct application of those results to related problems.

MATH 547 : Partial Differential Equations 1. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 334, 342; or equivalents.

DESCRIPTION: Methods of analysis for hyperbolic, elliptic, and parabolic equations, including characteristic manifolds, distributions, Green's functions, maximum principles and Fourier analysis.

**Course Outcomes**

- Students should understand the topics listed in the minimal learning outcomes on the Math 547 Wiki page. As evidence of that understanding, students should be able to demonstrate mastery of all relevant vocabulary, familiarity with common examples and counterexamples, knowledge of the content of the major theorems, and ability to make direct application of those results to related problems, including calculations.

MATH 553 : Foundations of Topology 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 341

DESCRIPTION: Naive set theory, topological spaces, product spaces, subspaces, continuous functions, connectedness, compactness, countability, separation axioms, metrization, complete metric spaces, function spaces, and Baire spaces.

**Course Outcomes**

- Students should gain a familiarity with the general topology that is used throughout mathematics.For more detailed information visit the Math 553 Wiki page.

MATH 554 : Foundations of Topology 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Math 553 or instructor's consent.

DESCRIPTION: Fundamental group, retractions and fixed points, homotopy types, separation theorems, classification of surfaces, Seifert-van Kampen Theorem, classification of covering spaces, and applications to group theory.

**Course Outcomes**

- Students should gain a familiarity with surfaces, fundamental group, and covering spaces.For more detailed information visit the Math 554 Wiki page.

MATH 561 : Introduction to Algebraic Geometry 1. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 671 or concurrent enrollment.

DESCRIPTION: Basic definitions and theorems on affine, projective, and quasi-projective varieties.

**Course Outcomes**

There are no course outcomes available

MATH 562 : Introduction to Algebraic Geometry 2. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: MATH 561

DESCRIPTION: Local properties of quasi-projective varieties. Divisors and differential forms.

**Course Outcomes**

There are no course outcomes available

MATH 565 : Differential Geometry. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 342 or equivalent.

DESCRIPTION: A rigorous treatment of the theory of differential geometry.

**Course Outcomes**

- Students should achieve mastery of the topics listed in the minimal learning outcomes section of the Math 565 Wiki page. This means that they should know all relevant definitions, full statements of the major theorems, and examples of the various concepts. Further, students should be able to solve non-trivial problems related to these concepts, and prove theorems in analogy to proofs given by the instructor.

MATH 570 : Matrix Analysis. (3:3:0)

PREREQUISITE: Math 302 or 313 or equivalent.

DESCRIPTION: Special classes of matrices, canonical forms, matrix and vector norms, localization of eigenvalues, matrix functions, applications.

**Course Outcomes**

- The minimal learning outcomes section of the Math 570 Wiki page outlines material which all students in Math 570 should understand. As evidence of that understanding, students should be able to demonstrate mastery of relevant vocabulary, familiarity with common examples and counterexamples, knowledge of the major theorems, understanding of the ideas in their proofs, and ability to make direct application of those results to related problems.

MATH 571 : Algebra 1. (3:3:0)

PREREQUISITE: Math 372 or equivalent.

DESCRIPTION: Group theory, ring theory.

**Course Outcomes**

There are no course outcomes available

MATH 572 : Algebra 2. (3:3:0)

PREREQUISITE: MATH 571

DESCRIPTION: Modules, vector spaces, field theory, Galois theory.

**Course Outcomes**

There are no course outcomes available

MATH 586 : Introduction to Algebraic Number Theory. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 372 or equivalent.

DESCRIPTION: Algebraic integers; different and discriminant; decomposition of primes; class group; Dirichlet unit theorem; Dedekind zeta function; cyclotomic fields; valuations; completions.

**Course Outcomes**

- Students should achieve an advanced mastery of the topics listed on the 586 Math Wiki page. This means that they should know all relevant definitions, correct statements and proofs of the major theorems (including their hypotheses and limitations), and examples and non-examples of the various concepts. The students should be able to demonstrate their mastery by solving difficult problems related to these concepts, and by proving theorems about the below concepts, even if the theorems go beyond the material in the text.

MATH 587 : Introduction to Analytic Number Theory. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Math 352 or equivalent.

DESCRIPTION: Arithmetical functions; distribution of primes; Dirichlet characters; Dirichlet's theorem; Gauss sums; primitive roots; Dirichlet L-functions; Riemann zeta-function; prime number theorem; partitions.

**Course Outcomes**

- Students should be familiar with the concepts listed on the Math 587 Wiki page. They should know the technical terms, and be able to implement the methods taught in the course to work associated problems, including proving simple results.

## Graduate Courses

For 600- and 700-level courses, see the BYU 2014–2015 Graduate Catalog.

## Professors

Baker, Roger C.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Birkbeck College, London, 1968
PhD, Birkbeck College, London, 1971

Barrett, Wayne Walton
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, University of Utah, 1968
MS, New York University, 1975
PhD, New York University, 1975

Cannon, James W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BA, University of Utah, 1967
PhD, University of Utah, 1969

Cardon, David Alan
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1990
MS, Stanford University, 1993
PhD, Stanford University, 1996

Chahal, Jasbir S.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** MA, Punjab University, India 1970
PhD, Johns Hopkins University, 1979

Conner, Gregory
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BA, Humboldt State University, 1987
MS, University of Utah, 1989
PhD, University of Utah, 1992

Dallon, John Carlile
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BA, University of Utah, 1989
MS, University of Utah, 1991
PhD, University of Utah, 1996

Dorff, Michael John

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BA, Brigham Young University, 1986
MS, University of New Hampshire, 1992
PhD, University of Kentucky, Lexington, 1997

Doud, Darrin M.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1992
MS, Brigham Young University, 1993
MS, University of Illinois, Urbana-Champaign, 1999
PhD, University of Illinois, Urbana-Champaign, 1999

Fearnley, Lawrence
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, University of London, 1953
PhD, University of Utah, 1959

Forcade, Rodney W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, University of Chicago, 1961
MS, University of Chicago, 1963
PhD, University of Washington, 1971

Halverson, Denise M.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1989
MS, Brigham Young University, 1994
PhD, University of Tennessee, Knoxville, 1999

Humphries, Stephen P.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BSc, University of Wales, 1974
MSc, University of Wales, 1978
PhD, University of Wales, 1983

Jarvis, Tyler J.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1989
MS, Brigham Young University, 1990
MA, Princeton University, 1992
PhD, Princeton University, 1994

Kuttler, Kenneth L.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1974
MS, Brigham Young University, 1976
PhD, University of Texas, Austin, 1981

Lang, William E.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BA, Carleton College, 1974
MS, Yale University, 1975
PhD, Harvard University, 1978

Li, Xian-Jin
**COLLEGE:** Physical and Mathematical Sciences

**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Hunan Normal University, China, 1982
MS, Academia Sinica, Beijing, China, 1985
PhD, Purdue University, 1993

Lu, Kening
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Sichuan University, China, 1982
MS, Sichuan University, China, 1985
PhD, Michigan State University, 1988

Ouyang, Tiancheng
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** MS, Nankai University, China, 1981
PhD, University of Minnesota, Minneapolis, 1989

Roundy, Robin O.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1978
MS, Brigham Young University, 1980
PhD, Stanford University, 1984

Smith, William V.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, University of Utah, 1973
PhD, University of Utah, 1978

Wright, David Grant
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1970
MA, University of Wisconsin, Madison, 1972
PhD, University of Wisconsin, Madison, 1973

## Associate Professors

Bakker, Lennard Frank
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, University of Victoria, Canada, 1991
MS, University of Victoria, Canada, 1993
PhD, Queen's University, Canada, 1997

Chow, Shue-Sum
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, University of Canterbury, New Zealand, 1979
PhD, Australian National University, Australia, 1983

Fisher, Todd
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1998
MS, Brigham Young University, 1999
PhD, Northwestern University, 2004

Glasgow, Scott Alan
**COLLEGE:** Physical and Mathematical Sciences

**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1988
PhD, University of Arizona, 1993

Grant, Christopher P.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1986
MS, Brigham Young University, 1988
PhD, University of Utah, 1991

Humpherys, Jeffrey C.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, Utah State University, 1995
MA, Indiana University, 1997
PhD, Indiana University, 2002

Lawlor, Gary
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1984
PhD, Stanford University, 1988

Purcell, Jessica
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BA, University of Utah, 1998
MS, University of Michigan, 1999
PhD, Stanford University, 2004

Swenson, Eric Lewis
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1987
PhD, Brigham Young University, 1993

Villamizar, Vianey
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Associate Professor
**DEGREES:** BS, Universidad Central de Venezuela, 1977
MS, Universidad Central de Venezuela, 1983
PhD, Rensselaer Polytechnic Institute, 1987

## Assistant Professors

Jenkins, Paul M.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2000
MS, Brigham Young University, 2002
PhD, University of Wisconsin, Madison, 2006

Nielsen, Pace
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2001
PhD, University of California, Berkeley, 2006

## Admission to Degree Program

Candidates for all teacher preparation programs are required to complete an application that includes core criteria for each program.

## The Discipline

Mathematics is the discipline through which we make sense of the order, patterns, and quantitative situations we perceive in the world around us. The foundational skills of this discipline—the abilities to formulate, focus, and solve problems; to articulate, test, and justify conjectures; to communicate one's reasoning about quantities and the relationships between them; and to see connections between different mathematical ideas and real-world contexts—are highly valued in society and are characteristics of any educated person. Mathematics is not only a body of knowledge but also a process of analysis, reasoning, comparison, deduction, generalization, and problem solving.

Mathematics educators depend heavily upon their own understanding of mathematics in order to identify and articulate the mathematical ideas they want students to learn, to assess which concepts their students already understand that might serve as a foundation for learning, and to develop activities that help students develop rich understandings. They also use their understanding of the nature of the discipline to structure a culture of inquiry, reasoning, and problem solving in their classrooms.

Courses in the undergraduate program are designed to help prospective teachers plan, manage, and implement classroom activities that facilitate students' learning of mathematics. Specific program goals include (1) mastery of the foundational skills of mathematics, (2) deep reflection on mathematics learning at all levels through observation of and participation in high-quality classroom practice, (3) increased autonomy and confidence as an investigator, active learner, and productive thinker, and (4) extended field experience, informed by the best current understanding.

Program faculty include educational and mathematical researchers, specialists in both preservice and inservice teacher education, and school practitioners, spanning a broad range of interest and experience.

## Career Opportunities

Majors in mathematics education prepare for careers in teaching at the middle school and junior and high school levels or for graduate studies in the field.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

## Undergraduate Programs and Degrees

**BS in Mathematics Education** (Program Outcomes)

**Minor in Mathematics Education**

Students should see their college advisement center and department advisors for information concerning the undergraduate programs.

## Graduate Programs and Degrees

MA in Mathematics Education

For more information see the BYU 2014–2015 Graduate Catalog.

## Advisement

Upon completion of the calculus sequence (Math 112 [honors section] and Math 113 [honors section], or equivalent AP credit), undergraduate majors are strongly encouraged to meet with the department undergraduate advisor to make a graduation plan.

Students who are considering graduate work in mathematics education may receive advice from the graduate coordinator.

## General Information

It is recommended that a student complete the following courses in high school:

- 4 units of English.
- 1 unit of physics or chemistry.
- 4 units of mathematics, including 2.5 units of algebra, 1 unit of geometry, and .5 unit of trigonometry. This qualifies a student to begin college mathematics with Math 112 (honors section). If calculus is available in high school, a student planning to major in mathematics education is strongly encouraged to take it; doing so requires completing one of the preceding algebra units before high school.
- Advanced Placement (AP) credit is available in mathematics as follows:
    - A score of 3 on the calculus AB exam gives credit in Math 110 and 111; a score of 4 or 5 on the calculus AB exam gives credit in Math 110 and 112.
    - A score of 3, 4, or 5 on the calculus BC exam gives credit in Math 112 and 113.
    - An AP student without credit in Math 112 must begin with Math 112 (honors section); an AP student without credit in Math 113 must begin with Math 112 or 113 (honors sections).
    - AP students with credit in Math 113 are urged to begin with Math 113 (honors section) anyway, unless they scored 5 on the calculus BC exam.
    - AP students should direct Educational Testing Service (ETS) to report scores to BYU to have credit posted.

Questions regarding placement should be directed to the Mathematics Education Department, 167 TMCB.

*This major is designed to prepare students to teach in public schools. In order to graduate with this major, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.*

## Program Requirements | View MAP | View Program Outcomes

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following core requirements:

MTHED 177 : Critical Review of School Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 113

DESCRIPTION: Strengthen understanding of high-school mathematics; gain awareness as mathematics learners in learning communities; learn how to support collaborative communities as teachers.

**Course Outcomes**

- Students have a deep understanding of select central concepts in middle school mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these select concepts.
- Students can engage in meaningful mathematical exploration, are willing and able to approach and solve challenging mathematics problems, and can reflect on their own learning to make inferences about how adolescents learn mathematics.
- Students know and can describe what it means to understand mathematics relationally, can demonstrate mathematical understanding by creating and evaluating conceptually-oriented mathematical explanations, and can explain why conceptually-oriented mathematics instruction is essential for supporting adolescents' learning of mathematics.
- Students recognize that mathematics instruction that does not build relational understanding has failed a majority of adolescents, even themselves, and that they have a moral obligation to seek the necessary knowledge and expertise to teach mathematics in ways that enable all adolescents to develop conceptual understanding, procedural fluency, and facility with authentic mathematical practices.

MTHED 276 : Exploration of Mathematics Teaching. (4:2:4)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 290 & MATH 313 & MTHED 117; or MATH 290 & MATH 313 & MTHED 177; FBI fingerprint and background clearance.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching mathematics to secondary students.

**Course Outcomes**

- Students understand authentic mathematical practices and use them to engage in meaningful mathematical exploration and reflect on their own use of these practices to make inferences about how adolescents might engage in mathematical tasks.
- Students articulate a philosophy of teaching and learning mathematics based on the professional standards for teaching mathematics, the moral dimensions of teaching, and the INTASC standards.
- Students can use curriculum guides such as the NCTM content standards or the Common Core State Standards to trace the K-12 development of a select central concept of mathematics as a means for planning instruction appropriate to a particular grade level and topic.
- Students can analyze and describe the mathematical experiences of adolescents in terms of the tasks, discourse and learning environments they observe in public school classrooms, and can reconcile the theoretical principles of their university experience with the reality of a secondary classroom.

MTHED 277 : Task Design and Assessment of Student Understanding. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MTHED 177 & MTHED 276; or MTHED 117 & MTHED 276

DESCRIPTION: Building tasks that elicit important mathematical ideas. Reflecting on and assessing the success of tasks through questioning and other methods of formative assessment.

**Course Outcomes**

- Students have a deep understanding of select central concepts in high school mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these concepts.
- Students can analyze a section in a textbook or curricular unit, a specific mathematical topic, or a task to identify and describe the important mathematical concepts and procedures related to that section, topic, or task.
- Students can use their knowledge of mathematics and how adolescents learn mathematics to analyze a task in order to anticipate the type of mathematics learning it might foster or reveal.
- Students understand how mathematical tasks can support adolescents' development of conceptual understanding and procedural fluency, and can use that understanding to design mathematical tasks that allow adolescents to use their prior knowledge and experiences to develop understanding of particular concepts and procedures.
- Students understand how formative and summative assessment can be used to support adolescents' development of conceptual understanding and procedural fluency, and can use that understanding to design assessment tasks that provide evidence of and insight into adolescents' understanding of particular concepts and procedures.
- Students recognize and can explain how the thoughtful use of mathematical tasks can enable them to reflect on and improve their instruction, and how such use can nurture and empower adolescents to draw upon their divine potential, intelligence, and capabilities to learn and do mathematics.

MTHED 308 : Mathematics Teaching with Technology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 313 & MATH 362

DESCRIPTION: Using technology to teach and understand mathematics. Math-specific software and calculators used to investigate Euclidean geometry, non-Euclidean geometry, algorithms, probabilities, etc., research regarding effectiveness.

**Course Outcomes**

- Students have a deep understanding of select central concepts in secondary mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these select concepts.
- Students can use technology to engage in meaningful mathematical exploration and can reflect on their own learning to make inferences about how adolescents learn mathematics with technology.
- Students can articulate and represent their mathematical thinking in technological environments in ways that are appropriate for their intended audience.
- Students understand the affordances and constraints of technology in teaching mathematics and can apply this knowledge to design learning opportunities involving the use of technology to support adolescents' mathematical learning.

MTHED 377 : Mathematics Teaching in the Public Schools. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MTHED 277; Departmental consent.

DESCRIPTION: Mathematics teaching practice in grades 7-12, including lesson/task design, curriculum evaluation, and classroom management in context of practice teaching.

**Course Outcomes**

- Students understand the central concepts, tools of inquiry, and structures of the discipline of mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching secondary school mathematics.
- Students can analyze a task, a section in a textbook or curricular unit, or a specific mathematical topic to identify and describe the related important mathematical concepts and procedures, and can design relevant tasks that foster conceptual understanding, procedural fluency, and authentic mathematical practices.
- Students understand how to create lesson plans that involve meaningful tasks in the context of a given unit, that anticipate student thinking and how the lesson might build on that thinking, and that articulate how they will orchestrate each phase of the lesson (launch, explore, discuss, unpack).
- Students can use their lesson plans to engage adolescents in the day's activities (launch), facilitate meaningful exploration of mathematics (explore), orchestrate discussion that builds on and extends adolescents' emerging mathematical conceptions (discuss) and ensure the important mathematical concepts and procedures related to the goals of the lesson are made explicit (unpack).
- Students understand how to design and use formative assessment that monitors the learner's progress, informs instructional decisions, and engages adolescents in assessing their own mathematical learning.
- Students demonstrate their professionalism through maintaining appropriate relationships and behavior in the MthEd 377 classroom setting; improving practice through reflection and by providing, soliciting and incorporating feedback; and contributing to the professional learning community of the classroom.

MTHED 378 : Practicum in Mathematics Education. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Concurrent enrollment in MthEd 377.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Students understand that adolescents develop mathematical knowledge by building on prior knowledge and experience; that adolescents differ cognitively, linguistically, socially, emotionally, and physically; and that adolescents learn best when given regular opportunities to reason about and make sense of mathematics in an environment of high expectations and strong support.
- Students understand how to design learning environments and mathematical experiences that engage all adolescents in the exploration and development of mathematical ideas, as well as how to effectively foster these environments and orchestrate these experiences by promoting conceptual understanding, procedural fluency, and authentic mathematical practices.

Students can analyze and describe the mathematical experiences of adolescents in terms of the tasks, discourse and learning environments they observe in public school classrooms, and can reconcile the theoretical principles of their university experience with the reality of a secondary classroom.
- Students demonstrate their professionalism through maintaining appropriate relationships and behavior in the school setting, and improve their practice through reflection and by providing, soliciting and incorporating feedback.

**Note 1:** Prerequisites for all mathematics education courses will be strictly adhered to.

**Note 2:** FBI fingerprint and background clearance must be completed prior to enrollment in MthEd 276.

3. Complete the following:

MATH 112 : Honors Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

MATH 113 : Honors Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 290 : Fundamentals of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 112 or concurrent enrollment with instructor's consent.
DESCRIPTION: Achieving maturity in mathematical communication. Introduction to mathematical proof; methods of proof; analysis of proof; induction; logical reasoning.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in mathematical thinking. It is intended as an introduction to mathematical proof, and students who finish the course should achieve maturity in mathematical communication. For more detailed information visit the Math 290 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 113 and Math 313.

DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

MATH 341 : Theory of Analysis 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Math 113 and Math 290.

DESCRIPTION: Rigorous treatment of calculus of a single real variable: topology, order, completeness of real numbers; continuity, differentiability, integrability, and convergence of functions.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the real number system and of real-valued functions of a single real variable, with the focus being on the theoretical and logical foundations of single-variable calculus. A secondary purpose of this course is to reinforce students' prior training in discovering and writing valid mathematical proofs.For more detailed information visit the Math 341 Wiki.

MATH 371 : Abstract Algebra 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 290 & MATH 313

DESCRIPTION: Groups, group homomorphisms, rings, ideals, and polynomials.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in abstract algebra. In addition to being an important branch of mathematics in its own right, abstract algebra is now an essential tool in number theory, geometry, topology, and, to a lesser extent, analysis. Thus it is a core requirement for all mathematics majors. Outside of mathematics, algebra also has applications in cryptography, coding theory, quantum chemistry, and physics. For more detailed information visit the Math 371 Wiki page.

MTHED 300 : (MthEd-Math) History and Philosophy of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 113

DESCRIPTION: Historical development of important mathematical ideas and philosophies; implications for the mathematical curriculum.

**Course Outcomes**

- Students understand and can describe the major approaches—cultural, philosophical, and psychological—to explaining the origin and nature of mathematics and its relation to understanding and modeling the physical world.
- Students understand and can describe the major historical periods of development of mathematical thought, as well as the contributions of various cultures and individuals within those periods.
- Students understand and can describe the historical development of concepts and practices central to school mathematics, including numeration, arithmetic, algebra, geometry, calculus, and probability.
- Through understanding the complex relationship between mathematical practices and human experience, students appreciate the complexity of teaching and learning mathematics and the different approaches and experiences adolescents will bring to learning those practices.

MTHED 362 : (MthEd-Math) Survey of Geometry. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 290

DESCRIPTION: Logical and historical development of Euclidean and non-Euclidean geometry, transformations and symmetry; relationships among axiomatic systems; use of software and other geometric models; proofs and Van Hiele levels.

**Course Outcomes**

- Students understand central objects, concepts, relationships, definitions, and theorems of Euclidean geometry, how adolescents come to understand these, and the canonical examples and alternative approaches germane to teaching secondary school geometry.
- Students can communicate geometric ideas effectively using a variety of appropriate representations and can construct valid proofs of geometric theorems within a given axiom system.
- Students understand and can describe the relationships among neutral, Euclidean, and non-Euclidean

geometries in terms of fundamental geometric concepts, objects, and properties (particularly parallelism), and can use the fundamental properties of axiom systems and models to provide convincing arguments about these relationships.

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis
- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

**Note:** Math 112 and 113 must be honors sections.

4. Complete one course from the following:

MATH 355 : Graph Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 313

DESCRIPTION: Maps, graphs and digraphs, coloring problems, applications.

**Course Outcomes**

- Graphs, trees, pathes and cycles, connectedness, chromatic number, planarity conditions, genus of a graph, the Five Color Theorem. Students should also be aware of Kuratowsky's Theorem, and the Four Color Theorem. If there is time, it is good to do the proof of Kuratowski's Theorem. For more detailed information visit the Math 355 Wiki page.

MATH 450 : Combinatorics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: MATH 371

DESCRIPTION: Permutations, combinations, recurrence relations, applications.

**Course Outcomes**

- Permutations and combinations basics, including the Pigeonhole Principle, binomial coefficients and the Binomial Theorem, Stirling's Approximation, Inclusion/exclusion, Generating functions and recurrence relations (rational functions), Groups, permutations and counting problems -- Polya's Theorem. For more detailed information visit the Math 450 Wiki page.

MATH 487 : Number Theory. (3:3:0)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 371

DESCRIPTION: Foundations; congruences; quadratic reciprocity; unique factorization, prime distribution or Diophantine equations.

**Course Outcomes**

- Students should know all relevant definitions, correct statements of the major theorems (including their hypotheses and limitations), and examples and non-examples of the various concepts The students should be able to demonstrate their mastery by solving non-trivial problems related to these concepts, and by proving simple (but non-trivial) theorems about the below concepts, related to, but not identical to, statements proven by the text or instructor. For more detailed information visit the Math 487 Wiki page.

5. A teaching minor is not needed for licensure. However, students interested in teaching an academic subject in addition to mathematics should consider pursuing a teaching minor in that discipline.

6. Complete the Professional Education Component:
   - Complete the following:

CPSE 402 : Educating Students with Disabilities in Secondary Classrooms. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or comparable major course; FBI fingerprint background clearance.

DESCRIPTION: Issues, policies, and methods in teaching secondary students with disabilities in general education classrooms. Lab.

**Course Outcomes**

- Demonstrate sensitivity to individuals with disabilities.
- Describe the effects of cultural, ethnic, and language diversity on the education of individuals with disabilities
- Describe the steps in the Individual Education Program (IEP) process, including Individualized Transition Plans for students aged 14-22.
- Use research-supported methods for academic instruction of individuals with disabilities including explicit instruction, learning strategies, task analysis, and active participation.
- Describe models and strategies of consultation and collaboration including co-planning and co-teaching.
- Define special education and describe the legal structure of services for individuals with disabilities, including the Individuals with Disabilities Education Act (IDEA).
- Develop a personal philosophy of special education which includes an understanding of the implications of Least Restrictive Environment as defined in IDEA.
- Demonstrate knowledge of basic classroom management theories and an understanding of teacher attitudes and behaviors that influence behavior of individuals with exceptional learning needs.
- Describe the characteristics and educational implications of students with high and low incidence disabilities
- Demonstrate ability to identify and prioritize areas of the general curriculum and provide accommodations for individuals with exceptional learning needs

SC ED 353 : Multicultural Education. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Designing and adapting instruction for diverse learners; collaborating with families, cultures, and communities in promoting and sustaining learning.

**Course Outcomes**

- Students will examine and understand the various dimensions of cultural identity, including one's own, and apply this knowledge to their thinking and behavio through a process of reflection.
- Acknowledge the dynamics of culture and diversity in school success and teachers' teaching. This includes recognizing and overcoming deficit thinking.
- Identify culturally and linguistically relevant pedagogy and use theoretically grounded principles to analyze why it is effective for many different types of learners.
- Interpret the historical context of diversity, discrimination, and language policies and evaluate how they impact current school practices.
- Recognize and acknowledge racism, discrimination and other forms of inquity and privilege in themselves, in others, and within institutions.
- Recognize and use a personal moral spiritual framework along with principles and concepts of social science to guide educational accomplishments for diverse learners.

SC ED 375 : Adolescent Development and Classroom Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B; or concurrent enrollment.

DESCRIPTION: Analysis of education practice and the relationship between theories and research on development, classroom management, education and the practice of teaching. Focus on adolescent development and an introduction to classroom management.

**Course Outcomes**

There are no course outcomes available

- Complete 12 hours of one of the following:

MTHED 476 : Secondary Student Teaching in Mathematics. (12:Arr:Arr)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Completion of all course work or departmental approval.

DESCRIPTION: Capstone, field-based, semester-long experience in teaching mathematics to secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

There are no course outcomes available

MTHED 496 : Academic Internship: Secondary Mathematics Education. (12:Arr:Arr)

WHEN TAUGHT: Fall

PREREQUISITE: Completion of all course work or departmental approval.

DESCRIPTION: Capstone, field-based, semester-long experience in teaching mathematics to secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

There are no course outcomes available

*Hours include courses that may fulfill university core requirements.

# Minor in Mathematics Education (33 hours*)

Show All Course Descriptions
Hide All Course Descriptions

*This minor is designed to prepare students to teach in public schools. A teaching minor may only be received by students graduating with a teaching major. In order to graduate with this minor, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 350 MCKB, (801) 422-3426.*

## Program Requirements

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 290 : Fundamentals of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 112 or concurrent enrollment with instructor's consent.
DESCRIPTION: Achieving maturity in mathematical communication. Introduction to mathematical proof; methods of proof; analysis of proof; induction; logical reasoning.

**Course Outcomes**

- This course is aimed at undergraduate mathematics and mathematics education majors. It is a first course in mathematical thinking. It is intended as an introduction to mathematical proof, and students

who finish the course should achieve maturity in mathematical communication. For more detailed information visit the Math 290 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 362 : (Math-MthEd) Survey of Geometry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: MATH 290
DESCRIPTION: Logical and historical development of Euclidean and non-Euclidean geometry, transformations and symmetry; relationships among axiomatic systems; use of software and other geometric models; proofs and Van Hiele levels.

**Course Outcomes**

- Students understand central objects, concepts, relationships, definitions, and theorems of Euclidean geometry, how adolescents come to understand these, and the canonical examples and alternative approaches germane to teaching secondary school geometry.
- Students can communicate geometric ideas effectively using a variety of appropriate representations and can construct valid proofs of geometric theorems within a given axiom system.
- Students understand and can describe the relationships among neutral, Euclidean, and non-Euclidean geometries in terms of fundamental geometric concepts, objects, and properties (particularly parallelism), and can use the fundamental properties of axiom systems and models to provide convincing arguments about these relationships.

MTHED 177 : Critical Review of School Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MATH 113
DESCRIPTION: Strengthen understanding of high-school mathematics; gain awareness as mathematics learners in learning communities; learn how to support collaborative communities as teachers.

**Course Outcomes**

- Students have a deep understanding of select central concepts in middle school mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these select concepts.
- Students can engage in meaningful mathematical exploration, are willing and able to approach and solve challenging mathematics problems, and can reflect on their own learning to make inferences about how adolescents learn mathematics.
- Students know and can describe what it means to understand mathematics relationally, can demonstrate mathematical understanding by creating and evaluating conceptually-oriented mathematical explanations, and can explain why conceptually-oriented mathematics instruction is essential for supporting adolescents' learning of mathematics.
- Students recognize that mathematics instruction that does not build relational understanding has failed a majority of adolescents, even themselves, and that they have a moral obligation to seek the necessary knowledge and expertise to teach mathematics in ways that enable all adolescents to develop conceptual understanding, procedural fluency, and facility with authentic mathematical practices.

MTHED 277 : Task Design and Assessment of Student Understanding. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MTHED 177 & MTHED 276; or MTHED 117 & MTHED 276
DESCRIPTION: Building tasks that elicit important mathematical ideas. Reflecting on and assessing the success of tasks through questioning and other methods of formative assessment.

**Course Outcomes**

- Students have a deep understanding of select central concepts in high school mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these concepts.
- Students can analyze a section in a textbook or curricular unit, a specific mathematical topic, or a task to identify and describe the important mathematical concepts and procedures related to that section, topic, or task.
- Students can use their knowledge of mathematics and how adolescents learn mathematics to analyze a task in order to anticipate the type of mathematics learning it might foster or reveal.
- Students understand how mathematical tasks can support adolescents' development of conceptual understanding and procedural fluency, and can use that understanding to design mathematical tasks that allow adolescents to use their prior knowledge and experiences to develop understanding of particular concepts and procedures.
- Students understand how formative and summative assessment can be used to support adolescents' development of conceptual understanding and procedural fluency, and can use that understanding to design assessment tasks that provide evidence of and insight into adolescents' understanding of

particular concepts and procedures.
- Students recognize and can explain how the thoughtful use of mathematical tasks can enable them to reflect on and improve their instruction, and how such use can nurture and empower adolescents to draw upon their divine potential, intelligence, and capabilities to learn and do mathematics.

MTHED 308 : Mathematics Teaching with Technology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 313 & MATH 362

DESCRIPTION: Using technology to teach and understand mathematics. Math-specific software and calculators used to investigate Euclidean geometry, non-Euclidean geometry, algorithms, probabilities, etc., research regarding effectiveness.

**Course Outcomes**

- Students have a deep understanding of select central concepts in secondary mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these select concepts.
- Students can use technology to engage in meaningful mathematical exploration and can reflect on their own learning to make inferences about how adolescents learn mathematics with technology.
- Students can articulate and represent their mathematical thinking in technological environments in ways that are appropriate for their intended audience.
- Students understand the affordances and constraints of technology in teaching mathematics and can apply this knowledge to design learning opportunities involving the use of technology to support adolescents' mathematical learning.

MTHED 377 : Mathematics Teaching in the Public Schools. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MTHED 277; Departmental consent.

DESCRIPTION: Mathematics teaching practice in grades 7-12, including lesson/task design, curriculum evaluation, and classroom management in context of practice teaching.

**Course Outcomes**

- Students understand the central concepts, tools of inquiry, and structures of the discipline of mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching secondary school mathematics.
- Students can analyze a task, a section in a textbook or curricular unit, or a specific mathematical topic to identify and describe the related important mathematical concepts and procedures, and can design relevant tasks that foster conceptual understanding, procedural fluency, and authentic mathematical practices.
- Students understand how to create lesson plans that involve meaningful tasks in the context of a given unit, that anticipate student thinking and how the lesson might build on that thinking, and that articulate how they will orchestrate each phase of the lesson (launch, explore, discuss, unpack).
- Students can use their lesson plans to engage adolescents in the day's activities (launch), facilitate meaningful exploration of mathematics (explore), orchestrate discussion that builds on and extends adolescents' emerging mathematical conceptions (discuss) and ensure the important mathematical concepts and procedures related to the goals of the lesson are made explicit (unpack).
- Students understand how to design and use formative assessment that monitors the learner's progress, informs instructional decisions, and engages adolescents in assessing their own mathematical learning.
- Students demonstrate their professionalism through maintaining appropriate relationships and behavior in the MthEd 377 classroom setting; improving practice through reflection and by providing, soliciting and incorporating feedback; and contributing to the professional learning community of the classroom.

MTHED 378 : Practicum in Mathematics Education. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Concurrent enrollment in MthEd 377.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Students understand that adolescents develop mathematical knowledge by building on prior knowledge and experience; that adolescents differ cognitively, linguistically, socially, emotionally, and physically; and that adolescents learn best when given regular opportunities to reason about and make sense of mathematics in an environment of high expectations and strong support.
- Students understand how to design learning environments and mathematical experiences that engage all adolescents in the exploration and development of mathematical ideas, as well as how to effectively foster these environments and orchestrate these experiences by promoting conceptual understanding, procedural fluency, and authentic mathematical practices.
- Students can analyze and describe the mathematical experiences of adolescents in terms of the tasks, discourse and learning environments they observe in public school classrooms, and can reconcile the theoretical principles of their university experience with the reality of a secondary classroom.
- Students demonstrate their professionalism through maintaining appropriate relationships and behavior in the school setting, and improve their practice through reflection and by providing, soliciting and incorporating feedback.

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis
- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

*Hours include courses that may fulfill university core requirements.

### 100-Level Courses

MTHED 177 : Critical Review of School Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 113

DESCRIPTION: Strengthen understanding of high-school mathematics; gain awareness as mathematics learners in learning communities; learn how to support collaborative communities as teachers.

**Course Outcomes**

- Students have a deep understanding of select central concepts in middle school mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these select concepts.
- Students can engage in meaningful mathematical exploration, are willing and able to approach and solve challenging mathematics problems, and can reflect on their own learning to make inferences about how adolescents learn mathematics.
- Students know and can describe what it means to understand mathematics relationally, can demonstrate mathematical understanding by creating and evaluating conceptually-oriented mathematical explanations, and can explain why conceptually-oriented mathematics instruction is essential for supporting adolescents' learning of mathematics.
- Students recognize that mathematics instruction that does not build relational understanding has failed a majority of adolescents, even themselves, and that they have a moral obligation to seek the necessary knowledge and expertise to teach mathematics in ways that enable all adolescents to develop conceptual understanding, procedural fluency, and facility with authentic mathematical practices.

### 200-Level Courses

MTHED 276 : Exploration of Mathematics Teaching. (4:2:4)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 290 & MATH 313 & MTHED 117; or MATH 290 & MATH 313 & MTHED 177; FBI fingerprint and background clearance.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching mathematics to secondary students.

**Course Outcomes**

- Students understand authentic mathematical practices and use them to engage in meaningful mathematical exploration and reflect on their own use of these practices to make inferences about how adolescents might engage in mathematical tasks.
- Students articulate a philosophy of teaching and learning mathematics based on the professional standards for teaching mathematics, the moral dimensions of teaching, and the INTASC standards.
- Students can use curriculum guides such as the NCTM content standards or the Common Core State Standards to trace the K-12 development of a select central concept of mathematics as a means for planning instruction appropriate to a particular grade level and topic.
- Students can analyze and describe the mathematical experiences of adolescents in terms of the tasks, discourse and learning environments they observe in public school classrooms, and can reconcile the theoretical principles of their university experience with the reality of a secondary classroom.

MTHED 277 : Task Design and Assessment of Student Understanding. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MTHED 177 & MTHED 276; or MTHED 117 & MTHED 276

DESCRIPTION: Building tasks that elicit important mathematical ideas. Reflecting on and assessing the success of tasks through questioning and other methods of formative assessment.

**Course Outcomes**

- Students have a deep understanding of select central concepts in high school mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching these concepts.
- Students can analyze a section in a textbook or curricular unit, a specific mathematical topic, or a task to identify and describe the important mathematical concepts and procedures related to that section, topic, or task.

- Students can use their knowledge of mathematics and how adolescents learn mathematics to analyze a task in order to anticipate the type of mathematics learning it might foster or reveal.
- Students understand how mathematical tasks can support adolescents' development of conceptual understanding and procedural fluency, and can use that understanding to design mathematical tasks that allow adolescents to use their prior knowledge and experiences to develop understanding of particular concepts and procedures.
- Students understand how formative and summative assessment can be used to support adolescents' development of conceptual understanding and procedural fluency, and can use that understanding to design assessment tasks that provide evidence of and insight into adolescents' understanding of particular concepts and procedures.
- Students recognize and can explain how the thoughtful use of mathematical tasks can enable them to reflect on and improve their instruction, and how such use can nurture and empower adolescents to draw upon their divine potential, intelligence, and capabilities to learn and do mathematics.

**300-Level Courses**

MTHED 300 : (MthEd-Math) History and Philosophy of Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 113

DESCRIPTION: Historical development of important mathematical ideas and philosophies; implications for the mathematical curriculum.

**Course Outcomes**

- Students understand and can describe the major approaches—cultural, philosophical, and psychological—to explaining the origin and nature of mathematics and its relation to understanding and modeling the physical world.
- Students understand and can describe the major historical periods of development of mathematical thought, as well as the contributions of various cultures and individuals within those periods.
- Students understand and can describe the historical development of concepts and practices central to school mathematics, including numeration, arithmetic, algebra, geometry, calculus, and probability.
- Through understanding the complex relationship between mathematical practices and human experience, students appreciate the complexity of teaching and learning mathematics and the different approaches and experiences adolescents will bring to learning those practices.

MTHED 305 : Basic Concepts of Mathematics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Math 110 or equivalent; permission from Teacher Education Department.

DESCRIPTION: Concept-oriented exploration of number, measurement, and informal geometry in relation to children's learning.

NOTE: Required of prospective elementary school teachers.

**Course Outcomes**

- Students have a deep understanding of central concepts in elementary school mathematics related to whole numbers and whole number operations, number theory, integers and integer operations, geometry, and measurement; as well as core representations, canonical examples, patterns in children's thinking, and alternative algorithms germane to teaching these concepts.
- Students understand mathematics as a sense-making activity, can solve problems by employing conceptual understanding and mathematical reasoning, and can reflect on their own learning to make inferences about how children experience and understand mathematics.
- Students engage productively in mathematical inquiry, effectively communicate their mathematical ideas and reasoning with their peers, and reflect on the teaching practices modeled in the MthEd 305 classroom to make inferences about teaching practices that help children learn mathematics.

MTHED 306 : Concepts of Mathematics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MTHED 305; Permission from Teacher Education Department.

DESCRIPTION: Concept-oriented exploration of rational numbers and proportional reasoning, probability, and early algebraic reasoning in relation to children's learning.

NOTE: Required of prospective elementary school teachers.

**Course Outcomes**

- Students have a deep understanding of central concepts in elementary school mathematics related to fractions and fraction operations, probability, and early algebraic reasoning; as well as core representations, canonical examples, patterns in children's thinking, and alternative algorithms germane to teaching these concepts.
- Students engage productively in mathematical inquiry, effectively communicate their mathematical ideas and reasoning with their peers, and reflect on the teaching practices modeled in the MthEd 306 classroom to make inferences about teaching practices that help children learn mathematics.
- Students understand mathematics as a sense-making activity, can solve problems by employing conceptual understanding and mathematical reasoning, and can reflect on their own learning to make inferences about how children experience and understand mathematics.

MTHED 308 : Mathematics Teaching with Technology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 313 & MATH 362

DESCRIPTION: Using technology to teach and understand mathematics. Math-specific software and calculators used to investigate Euclidean geometry, non-Euclidean geometry, algorithms, probabilities, etc., research regarding effectiveness.

**Course Outcomes**

- Students have a deep understanding of select central concepts in secondary mathematics as well as core

representations, canonical examples, and alternative algorithms germane to teaching these select concepts.
- Students can use technology to engage in meaningful mathematical exploration and can reflect on their own learning to make inferences about how adolescents learn mathematics with technology.
- Students can articulate and represent their mathematical thinking in technological environments in ways that are appropriate for their intended audience.
- Students understand the affordances and constraints of technology in teaching mathematics and can apply this knowledge to design learning opportunities involving the use of technology to support adolescents' mathematical learning.

MTHED 362 : (MthEd-Math) Survey of Geometry. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 290

DESCRIPTION: Logical and historical development of Euclidean and non-Euclidean geometry, transformations and symmetry; relationships among axiomatic systems; use of software and other geometric models; proofs and Van Hiele levels.

**Course Outcomes**

- Students understand central objects, concepts, relationships, definitions, and theorems of Euclidean geometry, how adolescents come to understand these, and the canonical examples and alternative approaches germane to teaching secondary school geometry.
- Students can communicate geometric ideas effectively using a variety of appropriate representations and can construct valid proofs of geometric theorems within a given axiom system.
- Students understand and can describe the relationships among neutral, Euclidean, and non-Euclidean geometries in terms of fundamental geometric concepts, objects, and properties (particularly parallelism), and can use the fundamental properties of axiom systems and models to provide convincing arguments about these relationships.

MTHED 377 : Mathematics Teaching in the Public Schools. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MTHED 277; Departmental consent.

DESCRIPTION: Mathematics teaching practice in grades 7-12, including lesson/task design, curriculum evaluation, and classroom management in context of practice teaching.

**Course Outcomes**

- Students understand the central concepts, tools of inquiry, and structures of the discipline of mathematics as well as core representations, canonical examples, and alternative algorithms germane to teaching secondary school mathematics.
- Students can analyze a task, a section in a textbook or curricular unit, or a specific mathematical topic to identify and describe the related important mathematical concepts and procedures, and can design relevant tasks that foster conceptual understanding, procedural fluency, and authentic mathematical practices.
- Students understand how to create lesson plans that involve meaningful tasks in the context of a given unit, that anticipate student thinking and how the lesson might build on that thinking, and that articulate how they will orchestrate each phase of the lesson (launch, explore, discuss, unpack).
- Students can use their lesson plans to engage adolescents in the day's activities (launch), facilitate meaningful exploration of mathematics (explore), orchestrate discussion that builds on and extends adolescents' emerging mathematical conceptions (discuss) and ensure the important mathematical concepts and procedures related to the goals of the lesson are made explicit (unpack).
- Students understand how to design and use formative assessment that monitors the learner's progress, informs instructional decisions, and engages adolescents in assessing their own mathematical learning.
- Students demonstrate their professionalism through maintaining appropriate relationships and behavior in the MthEd 377 classroom setting; improving practice through reflection and by providing, soliciting and incorporating feedback; and contributing to the professional learning community of the classroom.

MTHED 378 : Practicum in Mathematics Education. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Concurrent enrollment in MthEd 377.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Students understand that adolescents develop mathematical knowledge by building on prior knowledge and experience; that adolescents differ cognitively, linguistically, socially, emotionally, and physically; and that adolescents learn best when given regular opportunities to reason about and make sense of mathematics in an environment of high expectations and strong support.
- Students understand how to design learning environments and mathematical experiences that engage all adolescents in the exploration and development of mathematical ideas, as well as how to effectively foster these environments and orchestrate these experiences by promoting conceptual understanding, procedural fluency, and authentic mathematical practices.
- Students can analyze and describe the mathematical experiences of adolescents in terms of the tasks, discourse and learning environments they observe in public school classrooms, and can reconcile the theoretical principles of their university experience with the reality of a secondary classroom.
- Students demonstrate their professionalism through maintaining appropriate relationships and behavior in the school setting, and improve their practice through reflection and by providing, soliciting and incorporating feedback.

**400-Level Courses**

MTHED 476 : Secondary Student Teaching in Mathematics. (12:Arr:Arr)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Completion of all course work or departmental approval.
DESCRIPTION: Capstone, field-based, semester-long experience in teaching mathematics to secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

There are no course outcomes available

MTHED 495R : Readings in Mathematics Education. (.5-2:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Instructor's consent.
DESCRIPTION: Directed readings beyond scope of usual undergraduate courses.

**Course Outcomes**

- Students have a deeper understanding of important issues and/or research in the field of mathematics education, and can use this new understanding to reevaluate their past and present experiences in mathematics classrooms, make connections to other important issues and problems in mathematics education, function more effectively in their role as an undergraduate research assistant, and/or reimagine their future experiences as a mathematics teacher.
- Students recognize that there is an extensive body of literature on the learning and teaching of mathematics; can identify important authors, papers, issues, findings, theories, and limitations in a subfield of the literature; and recognize and value the need to remain current with developments in the field of mathematics education.

MTHED 496 : Academic Internship: Secondary Mathematics Education. (12:Arr:Arr)

WHEN TAUGHT: Fall
PREREQUISITE: Completion of all course work or departmental approval.
DESCRIPTION: Capstone, field-based, semester-long experience in teaching mathematics to secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

There are no course outcomes available

MTHED 497R : Research in Mathematics Education. (1-3:0:Arr)

WHEN TAUGHT: Contact Department.
RECOMMENDED: MthEd 117, 218, Sc Ed 276R.
DESCRIPTION: Undergraduate research experience. Faculty-supervised research. Written and oral presentation of findings required.

**Course Outcomes**

- Students have a deeper understanding of the nature, design, and methods of research in the field of mathematics education; can make valuable contributions under limited supervision to the data collection and/or data analysis stages of faculty-directed mathematics education research; and can communicate their understanding of research in general, as well as of this specific research, through a scholarly oral or written report.
- Students have a deeper understanding of a key issue or problem in the field of mathematics education, and can use this new understanding to reevaluate their past and present experiences in mathematics classrooms, make connections to other important issues and problems in mathematics education, function more effectively in their role as an undergraduate research assistant, and/or reimagine their future experiences as a mathematics teacher.
- Students can identify their personal strengths and weaknesses in regards to conducting research in mathematics education, and have a sense for whether or not they would like to pursue more research opportunities through graduate study.

## 500-Level Graduate Courses (available to advanced undergraduates)

MTHED 500 : (MthEd-Chem-C S-Geol-Math-Phscs-Stat) Business Practices for Science and Mathematics Majors. (1.5:1.5:0)

WHEN TAUGHT: Winter
DESCRIPTION: (Math-Chem-C S-Geol-MthEd-Phscs-Stat) Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills necessary to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.
- Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

MTHED 550 : Problem Solving. (3:3:0)

PREREQUISITE: Strong background in undergraduate mathematics; instructor's consent.
DESCRIPTION: Solving and building explanations and presenting solutions to conceptually important problems. Analyzing research on problem solving and its role in teaching and learning mathematics.

**Course Outcomes**

- Students understand and can evaluate important issues, current and historical trends, theories, paradigms of research, and research findings in the field of mathematical problem solving, as well as their implications for the teaching and learning of problem solving explicitly and implicitly in the public schools, mathematics teacher

development, and participation in mathematics education scholarship.
- Students can apply principles of quality research to analyze and critique research on the mathematical process of problem solving, and understand the affordances and constraints of research paradigms and methodologies in this body of research.
- Students understand general approaches to and a variety of heuristics in the problem solving process and can apply these to solve various problems in mathematics as well as other areas of life.
- Students understand the pitfalls of teaching problem solving as a distinct content area of mathematics and the benefits of using problem solving as a process in the teaching of all mathematics. They understand how to design instruction to teach mathematics through problem solving.
- Students recognize the key role that problem solving plays in the field of mathematics as well as in the learning of school mathematics. They see the valuable insights provided by the literature on the teaching and learning of mathematics through problem solving, and feel a desire to continually seek opportunities to improve their ability to teach mathematics through problem solving and promote better instruction in schools by incorporating problem solving as a process for learning mathematics.
- Students strive to follow the example of Jesus Christ in both their personal and professional lives, seek consistency between their understanding of our trials here on earth as related to the restored gospel of Jesus Christ and principles of mathematical problem solving processes. Graduates use this enriched understanding problem solving as a method for teaching and learning mathematics by giving all students the agency and opportunity to solve mathematical problems on their own.

MTHED 562 : Euclidean Geometry: Content, Learning, and Teaching. (3:3:0)

PREREQUISITE: MthEd 362 or equivalent.

DESCRIPTION: Euclidean geometry, including classical problems, polyhedra, transformations, congruence, similarity, integer geometry, minimization; technology in geometry, Van Hiele levels, role of proof, and high school curriculum.

**Course Outcomes**

- Students understand and can evaluate the role of proof in geometry and in mathematics in general, the theories of how students progress through the van Hiele levels in learning geometry and how these two topics are related. They can use this knowledge to evaluate current instructional, curricular, and policy recommendations of leaders in mathematics education regrading the teaching of geometry in the public schools.
- Students can apply principles of quality research to analyze and critique research on the teaching and learning of geometry, and understand the affordances and constraints of research paradigms and methodologies in this body of research.
- Students understand the central concepts, conditions, definitions, theorems, assumptions, structure and extensions of high school (Euclidean) geometry. They can use these understandings to prove general cases of geometric theorems and apply these theorems to solve problems in Euclidean geometry.
- Students can assess the van Hiele level at which their students are operating and design tasks and lessons to move learners to a higher van Hiele level, eventually to the level of deduction and proof. Throughout the instruction at different van Hiele levels, students can continually evaluate the role that proof is playing for the learners and understand how to adjust their instruction to ensure that proof activities are meaningful. Students can use their knowledge of the van Hiele levels, proof, and the NCTM Standards to evaluate geometry curriculum for appropriate sequencing.
- Students recognize the key role that geometry should play in school mathematics and the valuable insights provided by the literature on the teaching and learning of geometry, and feel a desire to continually seek opportunities to improve their own teaching of geometry and promote better instruction of geometry in the schools by seeking to adapt the instruction to the van Hiele level of the students.
- Students strive to follow the example of Jesus Christ in both their personal and professional lives, seek consistency between their understanding of the restored gospel of Jesus Christ and principles of geometry teaching and learning, and use this enriched understanding of teaching and learning to nurture the divine potential of all in their spheres of influence.

MTHED 590 : Foundational Issues in Learning Mathematics. (3:2:2)

WHEN TAUGHT: Fall

PREREQUISITE: Teaching certificate or completion of student teaching.

DESCRIPTION: Introduction to research in mathematics learning; mathematical thinking; cognitive, social, and philosophical approaches to describing mathematics learning.

**Course Outcomes**

- Students understand and can evaluate important issues, trends, theories, paradigms of research, and research findings in the field of mathematics education, as well as their implications for the teaching and learning of mathematics in the public schools, mathematics teacher development, and participation in mathematics education scholarship.
- Students understand the importance of situating research problems and questions in the literature, and can identify important research problems and relate them to appropriate issues, trends, theories, paradigms, and findings in the literature.
- Students can use their understanding of the important issues, trends, theories, paradigms, and findings in the field of mathematics to evaluate, reflect on, and improve their mathematics instruction.
- Students perceive themselves as emerging scholars and leaders in the field, and feel responsibility for and commitment to their own growth and the growth of the field.
- Students strive to follow the example of Jesus Christ in both their personal and professional lives, seek consistency between their understanding of the restored gospel of Jesus Christ and principles of mathematics teaching and learning, and use this enriched understanding of teaching and learning to nurture the divine potential of all in their spheres of influence.

MTHED 591 : Scholarly Inquiry in Mathematics Education. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: MTHED 590

DESCRIPTION: Introduction to scholarly inquiry in mathematics education; issues in research methodology.

**Course Outcomes**

- Students understand and can evaluate important issues, trends, theories, paradigms of research, and research findings in the field of mathematics education, as well as their implications for the teaching and learning of mathematics in the public schools, mathematics teacher development, and participation in mathematics education scholarship.

- Graduates understand research methods in mathematics education and can a) locate an interesting and important problem; b) conduct a literature review to situate the problem; c) develop a conceptual framework; d) establish focused research questions; e) choose and implement appropriate methods for collecting and analyzing data; f) address issues of research quality such as validity, reliability, and significance; and g) effectively communicate their work both orally and in writing.
- Students understand the affordances and constraints of research paradigms and methodologies commonly used in mathematics education research and can analyze and critique research on teaching and learning mathematics according to principles of quality research.
- Students understand how to meaningfully apply research on teaching and learning mathematics in their teaching and use scholarly inquiry as a lens to reflect on that teaching.
- Students have developed knowledge and beliefs that enable and compel them to continually seek opportunities to improve their own practice, keep abreast of advances and developments in the field both locally and nationally, and provide leadership in professional, school, and community organizations.
- Students strive to follow the example of Jesus Christ in both their personal and professional lives, seek consistency between their understanding of the restored gospel of Jesus Christ and principles of mathematics teaching and learning studied in this course, and use this enriched understanding of teaching and learning to nurture the divine potential of all in their spheres of influence.

MTHED 598R : Topics in Mathematics Education. (.5-3:ARR:ARR)

PREREQUISITE: Instructor's consent.

DESCRIPTION: Includes specific research areas and curriculum studies of school mathematics topics (i.e. geometry, algebra, and calculus).

**Course Outcomes**

- Students understand and can evaluate important issues, trends, theories, paradigms of research, and research findings in the field of mathematics education related to the particular topic of study, as well as their implications for the teaching and learning of mathematics in the public schools, mathematics teacher development, and/or participation in mathematics education scholarship.
- Students can apply principles of quality research to analyze and critique research on the topic of study, and understand the affordances and constraints of research paradigms and methodologies in this body of research.
- Students understand mathematical content that illustrates important issues in the research on the topic of study.
- Students can use their understanding of the research on the topic of study to evaluate, reflect on, and improve their own teaching.
- Students recognize the key role that the topic of study plays in the learning and teaching of mathematics, and feel a desireto continually seek opportunities to improve their own practice, keep abreast of advances and developments in the field both locally and nationally, and/or provide leadership in professional, school, and community organizations.
- Students strive to follow the example of Jesus Christ in both their personal and professional lives, seek consistency between their understanding of the restored gospel of Jesus Christ and principles of mathematics teaching and learning studied in this course, and use this enriched understanding of teaching and learning to nurture the divine potential of all in their spheres of influence.

## Professors

Peterson, Blake E.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Professor
**DEGREES:** BA, Utah State University, 1986
MS, Washington State University, 1990
PhD, Washington State University, 1993

Williams, Steven R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1980
MS, Brigham Young University, 1983
PhD, University of Wisconsin, Madison, 1989

## Associate Professors

Corey, Douglas L.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Associate Professor
**DEGREES:** BA, Brigham Young University, 1999
MA, Brigham Young University, 2001
MA, University of Michigan, 2004
PhD, University of Michigan, 2007

Leatham, Keith R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Associate Professor
**DEGREES:** AS, Brigham Young University—Idaho, 1989
BS, Utah State University, 1992
MS, Utah State University, 1998
PhD, University of Georgia, 2002

Siebert, Daniel K.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1989
MS, Brigham Young University, 1993
PhD, University of California, San Diego, 2000

## Assistant Professors

Johnson, Kate R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Assistant Professor
**DEGREES:** BA, Miami University, Ohio, 2002
MEd, University of Pittsburgh, 2004
PhD, Michigan State University, 2013

Jones, Steven R.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Assistant Professor
**DEGREES:** BA, Brigham Young University, 2003
MS, Brigham Young University, 2005
PhD, University of Maryland, 2010

Teuscher, Dawn

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Assistant Professor
**DEGREES:** BA, Brigham Young University, 1994
MS, University of Utah, 2000
PhD, University of Missouri, 2008

## Associate Teaching Professor

Hendrickson, Scott

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Associate Teaching Professor
**DEGREES:** BA, Brigham Young University, 1979
MA, Brigham Young University, 1984

## Assistant Teaching Professor

Tanner, Amy

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Mathematics Education
**RANK:** Assistant Teaching Professor
**DEGREES:** BA, Brigham Young University, 2002
MA, Brigham Young University, 2005
PhD, University of Michigan, 2010

N-181 ESC, (801) 422-2674

## Admission to Degree Program

Special limitations apply for this teaching major.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.85
- Be in good standing with the Honor Code Office

*This major is designed to prepare students to teach in public schools. In order to graduate with this major, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.*

## Program Requirements | View MAP | View Program Outcomes

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following:

BIO 100 : Principles of Biology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Introductory course for general education students.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.
NOTE: Three lectures and one recitation section per week.

**Course Outcomes**

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

**Course Outcomes**

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 201 : Chemical Handling and Safe Laboratory Practices. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Safe handling of chemicals and safe practices in chemistry laboratories.

**Course Outcomes**

- Discuss regulations that govern a chemists activities: OSHO, EPA, DOT, CDC, NRC, and state agencies and specifically, the OSHA Laboratory Standard CFR 29 1910.1450 and EPA RCRA regulations (CFR 40) requiring “cradle to grave” responsibility
- Identify chemical hazard classes and follow administrative guidelines to work safely in a laboratory environment and properly store and dispose of chemicals. These guidelines include regulated exposure limits PEL, STEL, IDLH, Ceiling and other measurable standards, such as the TLV, LD50, LC50, SADT, and guidelines for use of compressed gases and cryogenic materials.
- Demonstrate usage of protective equipment available for chemical exposure.
- Respond to laboratory accidents, such as spills, fires, and cuts, and clean up a mercury spill.
- Recognize fire hazards and put out a fire using an ABC fire extinguisher.
- Discuss biological and radiological safety, including biosafety levels, management of biological waste, lasers, and radionuclides.

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

**Course Outcomes**

- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

**Course Outcomes**

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

**Course Outcomes**

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 112 : Historical Geology. (4:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 111

DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

**Course Outcomes**

- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere, and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological, depositional, tectonic, and climatic events in the context of the geological timescale.
- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

GEOL 210 : Field Studies. (3:0:9)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111 & GEOL 112

DESCRIPTION: Procedures in observing, collecting, and recording field data concerning properties of rock units.

NOTE: Contact Geological Sciences Department before April 15 for dates of upcoming August trip.

**Course Outcomes**

- Learn how to take accurate and complete field notes.Learn how to use a compass to measure strike and dip on outcrops in the field.Learn how to read topographic and geologic maps and relate the map to what you see in the field.
- Review rocks and minerals learned in earlier courses and be able to accurately identify them in the field.Understand the relationships between igneous rocks and minerals and magmatic processes.Understand the relationships between metamorphic rocks and minerals and the processes that formed them.Understand the significance of sedimentary rocks in understanding depositional systems and regional tectonics.
- Learn the basics of making a geologic map.Learn how to interpret the geology on a map to draw a geologic cross-section.Write up the results of data you collected along with your interpretation in a clear, consise manner.
- Become detailed observers of field geology
- Understand the formative processes of the geology of Utah's National Parks including Zion NP, Bryce Canyon NP, and Capitol Reef NP.
- Develop an understanding of the interelationships of stratigraphy, structural geology, and surficial processes on landscape evolution.

PHIL 423 : History and Philosophy of Science. (3:3:0)

PREREQUISITE: Phy S 100 or instructor's consent; Phil 300.

DESCRIPTION: Scientific explanation, concepts, and models. Philosophical assumptions and criteria for theory selection, as exemplified by historical development of basic ideas in science.

**Course Outcomes**

- Know major concepts, theories, figures, texts, and issues in the history and philosophy of Western science from antiquity to the contemporary era.
- Read and critically discuss figures and texts in the philosophy of science.
- Practice philosophical analysis and argumentation orally and in writing; write a complex, nuanced, and well-referenced research paper on the philosophy of science.
- Be able to explain the practice and value of philosophy of science.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

**Course Outcomes**

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

**Course Outcomes**

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

**Course Outcomes**

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

**Course Outcomes**

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 127 : Descriptive Astronomy. (3:3:1)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

PHSCS 137 : Severe and Hazardous Weather. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: Phy S 100 or high school/college physics.
DESCRIPTION: Nonmathematical introduction to meteorology. Atmospheric structure and dynamic behavior, focusing on short-term violent weather and longer-term hazards: drought, floods, heat waves, cold waves, and climate change, including human environmental impact.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

3. Complete one course from the following:
   GEOL 100 : Dinosaurs. (3:1:2)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Hands-on examination of vertebrate fossils -- especially dinosaurs. For nonscience majors. Field trips.

**Course Outcomes**

- Be able participate in meaningful discussions on the relationships of science and religion.
- Confidently explain the relationships between deep time, the diversity of life, and plate tectonics.
- Be able to explain how science works via examples from geology and paleontology.
- Have an infectious sense of awe and wonder for today's biotic and abiotic realms as part of an ever-changing Earth.
- Using cladistic methods be able to explain the basic phylogenetic relationships within Dinosauria, including birds.

GEOL 351 : Mineralogy. (4:2:4)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112; Chem 105 or 111 or concurrent enrollment.

DESCRIPTION: Principles of crystallography and crystal chemistry. Physical, chemical, and crystallographic properties of minerals.

**Course Outcomes**

- Demonstrate understanding of the fundamental ideas that govern the arrangement of atoms into a crystalline structure (chemical bonding, atomic size, coordination number, polymerization of polyhedra, bond strength and bond valence, stability, etc.)
- Demonstrate a basic understanding of atomic level symmetry. Enumerate and describe the crystal systems in terms of both symmetry and unit-cell metrics, recognize symmetry elements in well-formed natural crystals, and determine crystal classes of such crystals.
- Describe the applications and limitations of important instrumental/analytical methods used in mineralogy.
- Identify specimens of the 60-70 most common minerals at least 70% of the time.
- Demonstrate an understanding of the mechanisms and implications of various mineralogical phenomena, including solid solution, exsolution, polymorphism, atomic ordering, polytypism, color, and twinning.
- Discuss the interrelationships among crystallography, composition, and the physical properties of minerals.
- Demonstrate the ability to apply principles learned to minerals not specifically encountered in the course.
- Use computer software for reduction of mineralogical data and be able to discuss its limitations.
- Demonstrate the ability to work in teams to collect and analyze mineralogical data and incorporate it into an original, high quality research paper on an assigned subject of mineralogical significance.

GEOL 370 : Sedimentology and Stratigraphy. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GEOL 112 & GEOL 210 & GEOL 230

DESCRIPTION: Erosion; sediment entrainment, transport, and deposition; depositional systems and facies analysis; principles of stratigraphy. Field trips.

**Course Outcomes**

- Apply problem solving, critical thinking, and communication skills relative to depositional models and interpreting the stratigraphic record.
- Understand depositional systems, facies relationships, and introductory aspects of sequence stratigraphy.
- Discuss processes and forces that weather, transport, and deposit sedimentary grains under both sunaqueous and subarial conditions.
- Observe and describe sedimentary rocks objectectively. Gain the ability to communicate using appropriate scientific vocabulary.

GEOL 480 : Paleontology. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 112

DESCRIPTION: Distribution, morphology, paleoecology, evolution, and stratigraphic significance of organisms in the geologic record. Field trips.

**Course Outcomes**

- Demonstrate understanding of the nature of fossils and types of fossilization that turn organic remains into fossils.
- Be able to explain the incompleteness of the fossil record and the taphonomic processes that affect fossils between death and burial and burial and discovery.
- Be able to recognize the major groups of invertebrate fossils on the basis of their morphology and be able to identify key index fossils to the species level.
- Demonstrate understanding of the uses of fossils in solving geological problems: paleoenvironments, relative age, paleocology.
- Understand the role of fossils in demonstrating the patterns of evolution through time.

4. Complete the teacher licensure requirements. Contact Education Student Services (120 MCKB, 801-422-3426) to schedule the final interview to clear your application for the secondary teaching license. You should be registered for your last semester at BYU prior to the scheduled appointment.

5. Complete the Professional Education Component:
    - Complete the following:

CPSE 402 : Educating Students with Disabilities in Secondary Classrooms. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or comparable major course; FBI fingerprint background clearance.

DESCRIPTION: Issues, policies, and methods in teaching secondary students with disabilities in general education classrooms. Lab.

**Course Outcomes**

- Demonstrate sensitivity to individuals with disabilities.
- Describe the effects of cultural, ethnic, and language diversity on the education of individuals with disabilities
- Describe the steps in the Individual Education Program (IEP) process, including Individualized Transition Plans for students aged 14-22.
- Use research-supported methods for academic instruction of individuals with disabilities including explicit instruction, learning strategies, task analysis, and active participation.
- Describe models and strategies of consultation and collaboration including co-planning and co-teaching.
- Define special education and describe the legal structure of services for individuals with disabilities, including the Individuals with Disabilities Education Act (IDEA).
- Develop a personal philosophy of special education which includes an understanding of the implications of Least Restrictive Environment as defined in IDEA.
- Demonstrate knowledge of basic classroom management theories and an understanding of teacher attitudes and behaviors that influence behavior of individuals with exceptional learning needs.
- Describe the characteristics and educational implications of students with high and low incidence disabilities
- Demonstrate ability to identify and prioritize areas of the general curriculum and provide accommodations for individuals with exceptional learning needs

IP&T 286 : Instructional Technology in Teaching. (1:1:ARR)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Using instructional design, visual design, and differentiated staffing principles along with multimedia authoring systems, telecommunication, and other computer-based tools in the development of educational applications for secondary education settings.

**Course Outcomes**

There are no course outcomes available

PHY S 276 : Exploration of Teaching. (4:4:0)

PREREQUISITE: FBI fingerprint and background clearance.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching secondary students.

**Course Outcomes**

- Students will become familiar with the four moral dimensions of education as outlined by the McKay School of Education
- Engage in the exploration of teachers and students in the public school to come to a conclusion if teaching physical science is a career path you want to pursue.
- Complete PIBS, CDS, Field Experience Demographic forms in Mackay School date collection program.

PHY S 377 : Teaching Methods and Instruction. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHY S 276

DESCRIPTION: Developing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Using Science Standards as a quide develop Assessments, Lesson Plans, Outlines, and all parts of a unit of science instruction.
- Inquiry, Constructivism, Lab, Activities, Projects and other methods to engage students in learning. These teaching methods will be modeled and practiced by the students.
- Students will complete Transition 2 level toward teaching license.

PHY S 378 : Practicum in Secondary Education. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Concurrent enrollment in Phy S 377.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- 30 practicum hours where you teach a unit of instruction with guidance public school mentor.

SC ED 353 : Multicultural Education. (2:2:0)

WHEN Fall; Winter; Spring; Summer

TAUGHT:
PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.
DESCRIPTION: Designing and adapting instruction for diverse learners; collaborating with families, cultures, and communities in promoting and sustaining learning.

**Course Outcomes**

- Students will examine and understand the various dimensions of cultural identity, including one's own, and apply this knowledge to their thinking and behavio through a process of reflection.
- Acknowledge the dynamics of culture and diversity in school success and teachers' teaching. This includes recognizing and overcoming deficit thinking.
- Identify culturally and linguistically relevant pedagogy and use theoretically grounded principles to analyze why it is effective for many different types of learners.
- Interpret the historical context of diversity, discrimination, and language policies and evaluate how they impact current school practices.
- Recognize and acknowledge racism, discrimination and other forms of inquity and privilege in themselves, in others, and within institutions.
- Recognize and use a personal moral spiritual framework along with principles and concepts of social science to guide educational accomplishments for diverse learners.

SC ED 375 : Adolescent Development and Classroom Management. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B; or concurrent enrollment.
DESCRIPTION: Analysis of education practice and the relationship between theories and research on development, classroom management, education and the practice of teaching. Focus on adolescent development and an introduction to classroom management.

**Course Outcomes**

There are no course outcomes available

**Note:** FBI fingerprint and background clearance must be completed prior to enrollment in Phy S 276.

- Complete 12 hours of one of the following:

SC ED 476R : Secondary Student-Teaching. (1-12:ARR:ARR)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.
DESCRIPTION: Capstone, field-based, semester-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

- Students will put into practice the theories they have learned in content and pedagogy courses including planning lessons, assessing students of all abilities and cultural backgrounds, using a variety of instructional strategies, and collaborating with other teachers and with the community.

: Secondary Student Teaching - Art.

**Course Outcomes**

: Secondary Student Teaching - Foreign Language. (12:ARR:ARR)

**Course Outcomes**

: Secondary Student Teaching - French.

**Course Outcomes**

: Secondary Student Teaching - Mathematics.

**Course Outcomes**

: Secondary Student Teaching - Physical Science.

**Course Outcomes**

: Secondary Student Teaching - Social Science.

**Course Outcomes**

: Secondary Student Teaching - Spanish.

**Course Outcomes**

SC ED 496R : Academic Internship: Secondary Education. (12:ARR:ARR)
WHEN TAUGHT: Fall
PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.
DESCRIPTION: Capstone, field-based, year-long experience in teaching secondary students;

demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

- Students will demonstrate that they can teach, manage, and assess content area knowledge and skills in the 7-12 classroom.
- Foster relationships with school colleagues, parents, and the larger community.

: Academic Internship: Social Sciences.

**Course Outcomes**

: Academic Internship: English.

**Course Outcomes**

: Academic Internship: Mathematics.

**Course Outcomes**

: Academic Internship: Biological Sciences.

**Course Outcomes**

: Academic Internship: Physical Sciences.

**Course Outcomes**

*Hours include courses that may fulfill university core requirements.

## Undergraduate Courses

### 100-Level Courses

PHY S 100 : Physical Science. (3:3:ARR)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Conceptual lectures and demonstrations of the most significant and universal laws and models describing the physical world by faculty from the Physics and Astronomy, Chemistry and Biochemistry, and Geology departments.

NOTE: Satisfies GE Physical Science requirement.

**Course Outcomes**

- Students will be able to recognize and apply the fundamental principles presented in this course to simple physical situations.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to explain how scientific observations led to the development of these few principles and the models built on them.
- Students will be able to explain how these principles and models in turn lead to further scientific questions.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public policy issues that affect their community.

### 200-Level Courses

PHY S 276 : Exploration of Teaching. (4:4:0)

PREREQUISITE: FBI fingerprint and background clearance.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching secondary students.

**Course Outcomes**

- Students will become familiar with the four moral dimensions of education as outlined by the McKay School of Education
- Engage in the exploration of teachers and students in the public school to come to a conclusion if teaching physical science is a career path you want to pursue.
- Complete PIBS, CDS, Field Experience Demographic forms in Mackay School date collection program.

### 300-Level Courses

PHY S 377 : Teaching Methods and Instruction. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHY S 276

DESCRIPTION: Developing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Using Science Standards as a quide develop Assessments, Lesson Plans, Outlines, and all parts of a unit of science instruction.
- Inquiry, Constructivism, Lab, Activities, Projects and other methods to engage students in learning. These teaching methods will be modeled and practiced by the students.
- Students will complete Transition 2 level toward teaching license.

PHY S 378 : Practicum in Secondary Education. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Concurrent enrollment in Phy S 377.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students; developing critical thinking, problem

solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- 30 practicum hours where you teach a unit of instruction with guidance public school mentor.

## Admission to Degree Program

All degree programs in the Department of Physics and Astronomy are open enrollment. However, special limitations apply for teaching majors.

## The Discipline

Over the centuries physicists and astronomers have studied the fundamental principles that govern the structure and dynamics of matter and energy in the physical world, from subatomic particles to the cosmos. Physicists also apply this understanding to the development of new technologies. For example, physicists invented the first lasers and semiconductor electronic devices.

Physics and astronomy students learn to approach complex problems in science and technology from a broad background in mechanics, electricity and magnetism, statistical and thermal physics, quantum mechanics, relativity, and optics. The tools they develop at BYU include problem solving by mathematical and computational modeling, as well as experimental discovery and analysis. All students gain professional experience in a research, capstone, or internship project, usually in close association with faculty. Together these experiences can provide excellent preparation for employment or for graduate studies in physics, other sciences, engineering, medicine, law, or business.

Most physicists and astronomers work in research and development in industrial, government, or university labs to solve new problems in technology and science. They also share the beauty discovered in our physical universe by teaching in high schools, colleges, and universities.

## Career Opportunities

> "More than most other majors, a physics degree is a passport into a broad range of science, engineering, and education careers." — Sloan Foundation

A degree in physics or physics–astronomy can provide:

1. Preparation for those who intend to enter industrial or governmental service as engineers, technicians, physicists or astronomers.
2. Education for those who intend to pursue graduate work in physics or astronomy.
3. Education in the subject matter of physics for prospective teachers of the physical sciences.
4. Undergraduate education for those who will pursue graduate work in the professions: business (e.g., an MBA), law (especially patent law), medicine, medical physics, etc.
5. Science, technical, and research background for graduate school in engineering, biophysics, or physical sciences.
6. Physics fundamentals required by the biological science, medical, dental, nursing, and related programs.

For more information about careers for physics and astronomy majors, see Careers for Physics Majors.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

## Undergraduate Programs and Degrees

**BS in Applied Physics** (Program Outcomes)
**BS in Physics** (Program Outcomes)
**BS in Physics-Astronomy** (Program Outcomes)
**BS in Physics Teaching** (Program Outcomes)

**Minor in Astronomy**

**Minor in Physics**
**Minor in Physics Teaching**

Students should see their college advisement center for help or information concerning the undergraduate programs.

## Graduate Programs and Degrees

MS in Physics
PhD in Physics
PhD in Physics and Astronomy

For more information see the BYU 2014–2015 Graduate Catalog.

## General Information

1. It is recommended that a student complete the following courses in high school:
   - 3 units of English
   - 1 unit of physical science, either chemistry or physics.
   - 4 units of mathematics, consisting of algebra, geometry, trigonometry, and calculus. This should qualify students to begin college mathematics with Math 113, Calculus 2.

   Because mathematics provides the foundation for all work in the physical and mathematical sciences, high school preparation in this subject is of particular importance.
2. Students in physics should take mathematics beginning the first semester of the freshman year. Most physics majors begin with Math 113. If calculus was not studied in high school, students can take Math 112 concurrently with Phscs 121 during the fall semester; then continue with 113 in winter semester.
3. Students are strongly urged to gain experience in computer programming.

## Program Requirements | View MAP | View Program Outcomes

1. No more than 3 hours of D credit is allowed in major courses.
2. Consult with a faculty advisor as early as possible to choose electives.
3. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular

reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 140 : Electronics Lab. (1:1:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Introduction to analog and digital circuits.

**Course Outcomes**

- Build and debug basic analog circuits that are of practical use in experimental physics such as voltage dividers, diode rectifiers, inverting and non-inverting op amp circuits, and transistor switches.
- Demonstrate understanding of electrical concepts of voltage, current, resistance, power, and input and output resistance through the analysis of simple circuits.
- Demonstrate proper use and limitations of electrical sources and test equipment including DC power supplies, multimeters, oscilloscopes, and function generators.
- Build and debug basic digital circuits that use components such as digital gates, flipflops, counters, and digital to analog converters.

PHSCS 145 : Experimental Methods in Physics. (1:0:3)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: PHSCS 140; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physical measurement and analysis, optics, sensors, actuators, and computer-based data acquisition.

**Course Outcomes**

- Demonstrate good practices in experimental physics documentation and communication such as data collection, record keeping, and presentation.
- Demonstrate the ability to analyze experimental data this includes techniques such as error estimation, error propagation, model selection, and curve fitting.
- Use simple optical devices (e.g. lenses, mirrors, slits and gratings, polarizers) to explore the geometric and wave properties of light.
- Apply AC concepts such as frequency response, frequency filtering, fourier transform analysis, and impedance to sinusoidally-driven electrical, mechanical, optical, and acoustical systems.

PHSCS 191 : Introduction to Physics Careers and Research 1. (.5:1:0)

DESCRIPTION: Survey of BYU undergraduate physics and astronomy programs, careers in physics and astronomy, and current physics and astronomy research.

NOTE: Take first semester after registered as physics major.

**Course Outcomes**

- Describe the major subfields of physics and the breadth of interdisciplinary research to which physicists contribute.
- Describe examples of current research in physics or astronomy, explaining what questions are being asked by the investigators and why these questions are interesting.
- Describe career opportunities available in physics and astronomy and the specific preparation necessary for these careers.
- Develop a draft of an educational plan for both undergraduate and graduate training.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

PHSCS 222 : Modern Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Quantum physics, atoms, molecules, condensed matter, nuclei, elementary particles, and selected topics in contemporary physics.

**Course Outcomes**

- Demonstrate their understanding of the fundamental postulates and principles of special relativity and quantum mechanics.
- Apply the principles of quantum mechanics to predict the results of measurements in simple systems such as a free particle, simple potential wells, and central potentials.
- Solve problems and answer conceptual questions applying the principles of quantum mechanics and special relativity to topics in modern physics such as atomic physics, molecular physics, the physics of solids, statistical physics, nuclear physics, radioactivity, and particle physics.

PHSCS 230 : Computational Physics Lab 1. (1:0:3)

WHEN Fall; Winter

TAUGHT:
PREREQUISITE: MATH 113
DESCRIPTION: Introduction to numerical and symbolic computation and graphical analysis using a symbolic mathematics program. Applications to mechanics, optics, and special relativity.

**Course Outcomes**

- Demonstrate the ability to apply calculus, linear algebra, and complex analysis to solve undergraduate-level physics problems.
- Demonstrate the ability to use programming constructs such as looping, conditional execution, and iteration to solve physics problems.
- Solve equations, including systems of equation, related to physical phenomena both symbolically and numerically.
- Demonstrate the ability to visualize, analyze, and interpret equations, data, and physical models.

PHSCS 240 : Design, Fabrication, and Use of Scientific Apparatus. (2:0:6)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: PHSCS 123 & PHSCS 145
DESCRIPTION: Machining, computer interfacing, controls, and vacuum systems.

**Course Outcomes**

- Design, build, and interface experimental apparatus.
- Make involved physical measurements and analyze experimental results.
- Document in a personal lab notebook the procedures, methods, results, and analysis of laboratory exercises.
- Present work in writing and through oral presentations.
- Demonstrate understanding of professional ethics guidelines for research activities and presentation of results.

PHSCS 245 : Experiments in Contemporary Physics. (2:0:6)
WHEN TAUGHT: Fall; Winter; Spring Odd Yrs.
PREREQUISITE: PHSCS 220 & PHSCS 240
DESCRIPTION: In-depth, multi-period experiments in contemporary physics, using advanced instrumentation.

**Course Outcomes**

- Demonstrate the use and assembly of experimental systems using contemporary instrumentation components to perform experiments in areas such as coherent optical systems, microfabrication, and vacuum systems.
- Independently design and carry out multi-period in-depth projects.
- Present research results through oral presentations.

PHSCS 291 : Introduction to Physics Careers and Research 2. (.5:1:0)
PREREQUISITE: PHSCS 123; Phscs 191 or concurrent enrollment.
DESCRIPTION: Career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law, and business. Personal planning for research or internship involvement.
NOTE: Take first semester as a sophomore.

**Course Outcomes**

- Describe career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law and business.
- Learn how to prepare for and succeed in such careers from physicists working in them.
- Develop a plan for research or internship involvement.
- Develop a plan for graduate school (if the student's career path requires it).

PHSCS 318 : Introduction to Mathematical Physics. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 303 & PHSCS 230; or MATH 334 & PHSCS 230
DESCRIPTION: Partial differential equations, classical field equations, algebra of complex variables, Fourier analysis, integral transforms, and orthogonal functions.

**Course Outcomes**

- Solve partial differential equations in Cartesian, cylindrical, and spherical coordinates using separation of variables and expansions in orthogonal functions. Apply boundary conditions appropriate for physical systems.
- Perform algebraic computations involving complex numbers and functions.
- Use the properties (such as recursion relations, derivative relationships, and orthogonality conditions) of various special functions, including trigonometric functions, Bessel functions, and Legendre polynomials to solve problems involving those functions.
- Use Fourier series and transforms to expand functions and solve partial differential equations on appropriate domains.

PHSCS 321 : Mechanics. (3:3:0)
WHEN TAUGHT: Fall; Spring
PREREQUISITE: PHSCS 121 & PHSCS 230 & MATH 302; or PHSCS 121 & PHSCS 230 & MATH 314; Math 303 or 334 or concurrent enrollment.
RECOMMENDED: Concurrent enrollment in Phscs 330.
DESCRIPTION: Newton's laws applied to particles and systems of particles, including rigid bodies. Conservation principles and Lagrange's and Hamilton's equations.

**Course Outcomes**

- Use Newtonian mechanics with forces and torques to solve problems in Cartesian and curvilinear coordinates.
- Solve mechanics problems using work-energy, and conservation of energy, momentum and angular momentum.
- Solve and analyze rigid-body problems and problems in non-inertial frames.
- Use Lagrangian and Hamiltonian mechanics to obtain the equations of motion for a variety of problems, including the use of generalized coordinates and cyclic coordinates.
- Use perturbation and similar techniques to linearize equations of motion to analyze stability and study coupled systems using normal modes.

PHSCS 330 : Computational Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 121 & PHSCS 230; Math 303 or 334 or equivalent; CS 142 or equivalent.

DESCRIPTION: Numerical solution of ordinary differential equations, linear algebra and eigenvalues, chaos theory. Applications to dynamics. Introduction to programming in Matlab.

**Course Outcomes**

- Demonstrate proficiency in using MATLAB and show that the student can write working programs.
- Be able to qualitatively explain how differential equations generate their solution curves.
- Use a symbolic mathematics programs and MATLAB to solve ordinary differential equations to simulate dynamical systems.

PHSCS 430 : Computational Physics Lab 3. (1:0:3)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 222 & PHSCS 318 & PHSCS 330

DESCRIPTION: Static and dynamic boundary value problems, partial differential equations. Applications in electrostatics, thermodynamics, waves, and quantum mechanics. Programming with Matlab.

**Course Outcomes**

- Numerically solve physics problems involving partial differential equations using Mathematica and MATLAB.
- Apply the basic programming concepts of looping and conditional branching to numerical problems.

PHSCS 441 : Electrostatics and Magnetism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 220 & PHSCS 318

DESCRIPTION: Classical theory of static electric and magnetic fields.

**Course Outcomes**

- Demonstrate the ability to apply the concepts of vector calculus as used in Maxwell's equations.
- Demonstrate the ability to integrate over a source distribution to calculate time-independent fields and potentials for both electricity and magnetism. Also demonstrate the ability to use Gauss's law and Amperes law to find electric and magnetic fields in symmetric situations.
- Demonstrate the ability to use vacuum harmonics, image charges, and image currents to solve for time-independent electric and magnetic potentials and fields.
- Demonstrate the ability to calculate electric and magnetic fields in the presence of matter which can be electrically and magnetically polarized, including the ability to solve problems involving torques and potential energies of electric and magnetic dipoles.

**Note:** Phscs 191 should be taken the first semester as a freshman. Phscs 291 should be taken the first semester as a sophomore.

4. Complete one course from the following:

EC EN 466 : Introduction to Optical Engineering. (2:3:1)

PREREQUISITE: EC EN 462

DESCRIPTION: Introduces principles and practices of optical engineering including optical communications system and components.

**Course Outcomes**

- Application of differential equations to solve metallic and dielectric waveguide problems.
- Application of integral calculus to solve diffraction problems.
- Application of linear algebra to find propagation characteristics in anisotropic media.
- Ability to apply modern optical test equipment to measure optical communication system parameters.

PHSCS 442 : Electrodynamics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 441

DESCRIPTION: Maxwell's equations, radiation, interaction of electromagnetic fields with matter, and special relativity.

**Course Outcomes**

- Demonstrate the ability to calculate time-dependent electric fields using Faraday's law and the ability to calculate time-dependent magnetic fields using Maxwell's displacement current.

- Demonstrate the ability to solve problems involving electric and magnetic energy densities and the Maxwell stress tensor.
- Demonstrate the ability to use Maxwell's equations to solve problems involving electromagnetic waves in vacuum and in matter.
- Demonstrate the ability to use the concept of retarded time to compute radiation potentials.
- Demonstrate the ability to solve problems involving the special theory of relativity, including 4-vectors, form invariance, and the electromagnetic field tensor.

PHSCS 471 : Principles of Optics. (3:3:1)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 121 & PHSCS 220 & MATH 302; or PHSCS 121 & PHSCS 220 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Phscs 318.

DESCRIPTION: Electromagnetic wave phenomena, including polarization effects, interference, coherence, dispersion, ray theory, diffraction; introduction to quantum nature of light. Laboratory component emphasizes applications.

**Course Outcomes**

- Use mathematical and conceptual descriptions of propagation of light in matter, reflection/transmission at boundaries, polarization effects, interference, dispersion, coherence, image formation, diffraction, and quantum aspects of light to analyze and predict optical phenomena.
- Manipulate and measure properties of light in a laboratory setting.
- Apply mathematical tools such as vector calculus, complex numbers, matrices, and Fourier transforms (1D and 2D) to optical problems.

5. After gaining department chair's approval of courses selected to define an option, complete an additional 12 hours of electives (cannot include any courses already taken above). These 12 hours must consist of a coherent set of upper-division courses with an identified educational goal. Nine hours must be upper division (300-level or above); three hours must be 200-level or above.

6. Complete one of the following options:

**Either**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 302 : Mathematics for Engineering 1. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Math 113.

DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

**Or**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

7. Complete one course from the following:

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 302
DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 113 and Math 313.
DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

8. Complete a capstone project or senior thesis, including the following:
   a. Choose a research mentor and group as early as possible, starting with information in Phscs 191 and 291, and discussions with faculty, your advisor, and the capstone project coordinator or senior thesis coordinator. It is best to start as a freshman or sophomore. Interdisciplinary work in other departments or in internships is possible.
   b. Complete 2 hours of one of the following

PHSCS 492R : Capstone Project in Applied Physics. (2:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Conducting and reporting original research or appropriate creative work. Mentored career experience combining physics and the chosen area of interest. Project must be approved by the department capstone project coordinator or the associate chair before registration or starting project.

**Course Outcomes**

- Students will produce, in both verbal and written form, a report of what was accomplished in his or her capstone project.

PHSCS 498R : Senior Thesis. (.5-3:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Conducting and reporting research under a department faculty mentor or other professionals.
NOTE: Thesis topic must be cleared by faculty member before registration.

**Course Outcomes**

- Perform significant research in physics or astronomy under the direction of a faculty or internship mentor.
- Present their research in a written document that follows professional standards in the field.
- Do the above within professional ethical standards.

- **Note 1:** Students planning careers in experimental, applied, or industrial physics should complete STAT 201.
- **Note 2:** All students will benefit, through courses or individual study, by learning programming skills and numerical methods beyond what you are taught in C S 142 and our computational physics courses. Consider the following: C S courses, MATH 410, ME EN 373.

## Sample Elective Courses

There is great flexibility in choosing elective courses. As soon as possible, meet with the assistant chair to define an emphasis and choose 12 credit hours of electives that meet career goals. The tracks below are only suggested. Students are free to design their own tracks or modify those below.

*Acoustics:*

PHSCS 461 : Introduction to Acoustics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 121 & PHSCS 123 & MATH 303; or PHSCS 121 & PHSCS 123 & MATH 334

RECOMMENDED: Concurrent enrollment in Phscs 318 or equivalent.

DESCRIPTION: Mathematical descriptions of physical phenomena in generation, propagation, and reception of acoustic waves. Fundamental acoustical instrumentation and analysis techniques. Application of physical principles and mathematical models to realistic problems.

**Course Outcomes**

- Demonstrate a conceptual and mathematical understanding of acoustical phenomena, including source radiation, transmission, absorption, and reflection.
- Perform acoustical measurements, interpret the data, and document the results in the form of technical laboratory reports.
- Appropriately calculate various measures of sound, including sound pressure level, transmission loss, sound power, weighted levels, and noise criteria.

And choose from among:

EC EN 380 : Signals and Systems. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: EC EN 240 & MATH 334

DESCRIPTION: Time and frequency domain analysis of discrete or continuous systems subjected to periodic or nonperiodic input signals.

**Course Outcomes**

- Application of integral calculus, differential equations, complex variables, to transform analysis of a continuous-time LTI system.
- Application of integral calculus, differential equations, complex variables, to transform analysis of a discrete-time LTI system.
- Application of integral calculus to solve continuous-time convolution problems.
- Application of discrete math to solve discrete-time convolution problems.
- Ability to use Matlab or similar tools to analyze, model, simulate, and experiment with linear systems.
- Ability to interpret and synthesize signals and systems in both the time and frequency domains.
- Ability to recognize the mathematical properties of signals and systems including linearity, time invariance, causality, stability, etc.
- An understanding of the consequences and principles associated with digitally sampling and reconstructing analog signals.

EC EN 487 : Introduction to Discrete-Time Signal Processing. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: EC EN 370 & EC EN 380

DESCRIPTION: Digital signal processing, fast Fourier transforms, digital filter design, spectrum analysis. Applications in speech processing, SONAR, communications, etc.

**Course Outcomes**

- Ability to apply principles of probablity theory for analysis and numerical estimation of power spectral densities.
- Ability to use basic DSP functions and algorithms (i.e., FIR filters, IIR filters, polyphase systems, windows, FFTs, etc.) to formulate and solve engineering problems.
- Ability to perform experiments with real-world signals and DSP systems, including discrete-time filters, spectrum analyzer, acoustic direction finding, etc.
- Ability to use software tools such as Matlab (R) to design, implement, and debug DSP functions.
- Application of integral calculus, discrete math, and complex variables, and transform theory to discrete-time signal processing.

ME EN 312 : Fluid Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: ME EN 321; Concurrent enrollment in Me En 363, 373.

DESCRIPTION: Physics and modeling of fluid flow; fluid statics, dimensional analysis, momentum, internal and external viscous flow, compressible flow, and fluid machinery.

**Course Outcomes**

- 1. Understand viscosity as a fluid property and be able to compute shear stress involving Newtonian fluids. Understand the different types of fluids and the phenomena of surface tension and cavitation.
- 2. Understand the variation in pressure, and determine pressure at a point in a static gas or liquid. Be able to compute hydrostatic forces on fully and partially submerged surfaces, and be able to determine the location of the center of pressure.
- 3. Understand field variables and be able to evaluate the local, convective, and total acceleration in flowing fluids. Recognize Lagrangian and Eulerian frames of reference.
- 4. Understand pressure distributions normal to, and parallel to, streamlines in flowing fluids. Be able to appropriately apply Bernoulli's principle to fluid dynamic situations and recognize the limitations of this principle.
- 5. Be able to derive the integral form of the conservation of mass principle from the Reynolds Transport Theorem and appropriately apply it to steady and unsteady flow situations with uniform or two-dimensional velocity distributions. Recognize and be able to utilize the differential form of conservation of mass.
- 6. Be able to derive the integral form of the linear momentum principle from the Reynolds Transport Theorem and apply global force/momentum balances for stationary and constant velocity frames of reference with uniform or two-dimensional velocity distributions. Recognize the Navier-Stokes equations and solve them for simplified viscous flows.
- 7. Be able to determine appropriate dimensionless variables for a given dynamical situation. Understand the usefulness in presenting experimental data using dimensional analysis. Predict prototype analysis based on similitude and understand the pitfalls of modeling.
- 8. Understand the mechanical energy equation and be able to apply it to laminar and turbulent flow with minor and major losses through pipe networks.
- 9. Understand and predict velocity distributions and boundary layer growth for flat plate boundary layers with laminar or turbulent flow. Understand flow separation, be able to predict skin friction and pressure drag for laminar and turbulent flows, and describe methods of drag reduction.

ME EN 335 : Dynamic System Modeling and Analysis. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: ME EN 363 & ME EN 373 & CE EN 204

DESCRIPTION: Formulating mathematical models for mechanical, electrical, fluid, and combined systems; numerical solution of motion equations; first- and second-order systems, frequency response, and transfer functions.

**Course Outcomes**

- 1. Students should have a knowledge of fundamental systems concepts required to develop lumped element models for basic mechanical systems, including inertia, compliance, dissipation, and power sources, and obtain equations of motion for linear motion and fixed-axis rotation.
- 2. Students should have a knowledge of fundamental systems concepts required to develop lumped element models for basic electrical systems, including inductance, capacitance, resistance, power sources and amplifiers.
- 3. Students should have a knowledge of fundamental systems concepts required to develop lumped element models for basic fluid systems, including inertance, capacitance, resistance, and pumps.
- 4. Students should have a knowledge of fundamental concepts of multi-domain modeling of electromechanical and fluid/mechanical systems and be able to develop lumped element models of these mixed systems.
- 5. Students should know how to place equations of motion into state variable form, and to develop a simulation for basic non linear and linear systems using Matlab or some other simulation software.
- 6. Students should know how to manipulate a system of linear differential equations to obtain transfer functions and poles.
- 7. Students should know how to interpret poles to define natural frequencies, damping ratios, time constants, and the natural response, step response, and impulse response of a system.
- 8. Students should understand the concept of frequency response. They should understand the relationship between transfer functions and frequency response, and should be able to obtain frequency response plots for their system models using Matlab.

ME EN 363 : Elementary Instrumentation. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ENG T 231 & MATH 303 & EC EN 301; or ENG T 231 & MATH 314 & EC EN 301; Concurrent enrollment in Engl 316.

DESCRIPTION: Fundamentals of mechanical measuring systems; sensors, signal conditioning, statistical error analysis, dynamic response, standards.

**Course Outcomes**

- 1. Students should have a knowledge of fundamental concepts of measurement including accuracy, precision, bias error, random error, DC offset, static sensitivity (DC gain), etc. Students should be able to calibrate (statically) a measurement system.
- 2. Students should understand the concept of time and frequency response as it applies to measurement systems. Students should understand the fundamentals of first- and second-order systems and should be able to characterize the behavior of such systems through the measurement of the time constant, natural frequency, and damping ratio.
- 3. Students should be familiar with the fundamental theory and techniques of data acquisition and signal conditioning. Students should understand the sampling process,

how aliasing can occur, and how to prevent aliasing with analog prefilters. Students should be able to use a Wheatstone bridge to condition signals from variable resistance devices. Students should be able to construct basic signal conditioning circuits using op-amps and electrical components (e.g., voltage divider, amplifier, differential amplifier, low-pass filter).

- 4. Through laboratory exercises and projects, students should gain hands-on familiarity with a variety of transducers, such as strain gages, thermocouples, and optical sensors. Students should understand the governing principles of their operation and how they influence their behavior.
- 5. Students should know basic statistical analysis principles that apply to measurement. Students should be able to apply concepts of infinite statistics to characterize large populations of measurement data. Similarly, they should be able to apply concepts of finite statistics to small samples of measurement data. Students should be able to apply least-squares analysis for curve-fitting purposes.
- 6. Students should be able to perform a basic uncertainty analysis for a measurement system. This includes the ability to perform a design-stage uncertainty analysis for a component of a sensor system, the ability to apply root-sum-of-squares methods to estimate uncertainty for multi-component systems, and the ability to determine how uncertainties are propagated in a calculated result.
- 7. Students should gain experience in documenting experimental work. Students should learn how to write a memo report and a full formal report.

*Aerospace Engineering (preparation for graduate school in engineering):*

CE EN 103 : Engineering Mechanics--Statics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 112; or MATH 111 & MATH 119; or concurrent enrollment.

DESCRIPTION: Concepts of mechanics: force systems in equilibrium, resultants, friction, centroids, utilization of vector algebra, simple trusses, shear and bending moment diagrams, moments of inertia.

**Course Outcomes**

- Be able to manipulate basic engineering units in both the International and US Customary Systems of Units in engineering analysis and be able to convert between the two.
- Be able to perform basic vector operations using standard vector notation.
- Be able to conceptualize and draw a conventional free-body diagram which identifies and applies all known and unknown forces.
- Understand the nature of forces(s) and their manipulation in engineering analysis, including moments, couples, transmissibility and resultants.
- Understand the conditions for equilibrium for both a particle and a rigid body.
- Be able to determine the axial forces in the members of a statically determinant truss.
- Be able to calculate the center of gravity for 2 and 3 dimensional rigid bodies.
- Be able to both calculate and draw diagrams for the internal shear forces and bending moments in straight, statically determinant beams.
- Understand the nature of friction and be able to solve problems involving friction and shear on horizontal and inclined planes.
- Be able to use calculus to compute centroids of lines, areas and volumes.
- Demonstrate competence in basic engineering analysis.

CE EN 203 : Engineering Mechanics--Mechanics of Materials. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CE EN 103

DESCRIPTION: Fundamental concepts of elastic stress and strain, including transformations and stress-strain relations; beam/column theories (axial, flexure, torsion, and shear loads and deformations); shear and bending moment relationships; column stability; and cylindrical and spherical pressure vessels.

**Course Outcomes**

- Students will be able to calculate and transform axial stress (e.g., Mohr's Circle), shear stress, bearing stress, thermal stress, bending stress, and combined stress.
- Students will be able to calculate strain, transform strain (e.g., Mohr's Circle), apply stress-strain relations (e.g., Hooke's Law), and solve statically indeterminate problems.
- Students will be able to analyze deflections due to axial, torsion, bending, and shear loads, and manipulate relations between shear and bending moment.
- Students will be able to design beams and columns to carry specified axial, flexure, and shear loads, and predict their deformation and elastic stability (i.e., buckling).
- Students will be able to predict stresses in pressure vessels.

ME EN 415 : Applied Aerodynamics and Flight Mechanics. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: ME EN 312

DESCRIPTION: Modern applied aerodynamics, including performance, stability, and control of aerospace vehicles.

**Course Outcomes**

- Aerodynamic design of an airplane.
- Designing an airplane with specific performance requirements.
- Designing an airplane for stable and controlled flight.
- Designing an airplane propulsion system.
- Airplane structural design.

Consider capstone project with engineering research group.

*Biophysics:*

Biology
Biochemistry
PDBIO 568 : Cellular Electrophysiology and Biophysics. (3:2:3)
WHEN TAUGHT: Fall
PREREQUISITE: PDBIO 362 & PHSCS 140; or PDBIO 362 & PHSCS 220
DESCRIPTION: Using electrophysiology and biophysics as an approach to study of physiology. Extensive look at ion channels and cell signaling.

**Course Outcomes**

- Students will demonstrate biophysical knowledge gained in specific areas including membrane properties, voltage and ligand-gated receptors, neurotransmission and mathematical modeling.
- Students will apply the biophysical knowledge gained in a laboratory setting.
- Students will demonstrate critical thinking and evaluation skills gained in the course by preparing a competent and clearly written research proposal.
- Students will demonstrate knowledge of a particular research topic and presentation skills in a clear and informative oral presentation.

*Computer Science / Computer Engineering / Scientific Computing:*

Courses in computer programming, information technology, networks, numerical analysis (math), computer engineering that fit career goals.

*Electrical Engineering (graduate school preparation):*

EC EN 320 : Digital System Design. (4:3:3)
WHEN TAUGHT: Winter
PREREQUISITE: EC EN 220 & EC EN 240
DESCRIPTION: Advanced digital design, including hardware description languages, electrical properties of digital circuits, synchronous and asynchronous circuits, computer arithmetic, and interfacing to external circuitry.

**Course Outcomes**

- Ability to describe a digital system in VHDL.
- Ability to simulate and debug a digital system described in VHDL.
- Ability to read and interpret a data sheet.
- Ability to implement logic using an FPGA.
- Ability to synchronize asynchronous inputs into a synchronous system and analyze the MTBF.

EC EN 380 : Signals and Systems. (4:3:3)
WHEN TAUGHT: Fall
PREREQUISITE: EC EN 240 & MATH 334
DESCRIPTION: Time and frequency domain analysis of discrete or continuous systems subjected to periodic or nonperiodic input signals.

**Course Outcomes**

- Application of integral calculus, differential equations, complex variables, to transform analysis of a continuous-time LTI system.
- Application of integral calculus, differential equations, complex variables, to transform analysis of a discrete-time LTI system.
- Application of integral calculus to solve continuous-time convolution problems.
- Application of discrete math to solve discrete-time convolution problems.
- Ability to use Matlab or similar tools to analyze, model, simulate, and experiment with linear systems.
- Ability to interpret and synthesize signals and systems in both the time and frequency domains.
- Ability to recognize the mathematical properties of signals and systems including linearity, time invariance, causality, stability, etc.
- An understanding of the consequences and principles associated with digitally sampling and reconstructing analog signals.

and 400-level courses.

Consider capstone project with engineering research group.

*Materials Science (graduate school preparation):*

PHSCS 451 : Quantum Mechanics. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: PHSCS 222 & PHSCS 318
DESCRIPTION: Analytical foundations of quantum mechanics.

**Course Outcomes**

- Understand the mechanics of operators, eigenstates and eigenvalues. Learn how to build wave functions, estimate expectation values and standard deviations, and apply the Heisenberg uncertainty principle.
- Manipulate the Schrödinger equation to solve for wave functions.
- Develop free-particle and bound-state solutions to the Schrödinger equation. (In particular, harmonic oscillator, infinite and finite square-well, finite barrier potentials…).
- Construct simple solutions for Hydrogen atom, angular momentum and spin systems, atoms and solids.

PHSCS 452 : Applications of Quantum Mechanics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 451

DESCRIPTION: Applications of quantum mechanics to atomic, molecular, statistical, condensed-matter, and nuclear physics; elementary particles.

**Course Outcomes**

- Apply techniques such as time-independent perturbation theory, variational methods, time-dependent perturbation theory, and scattering theory to quantum systems.
- Describe and quantify fine, hyperfine, and Zeeman level splittings in atoms.
- Characterize emission and absorption of radiation by atoms, and derive the associated selection rules.
- Solve quantum scattering and tunneling problems.

PHSCS 581 : Solid-State Physics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Phscs 222 or equivalent.

DESCRIPTION: Introduction to the physics of solids. Crystal structure and symmetry, X-ray diffraction, lattice vibrations, metals and semiconductors, superconductivity, thermal properties, magnetic properties, and dielectric and optical properties.

**Course Outcomes**

- Explain the following basic concepts underlying the topics in solid state physics: (1) crystal symmetry, (2) reciprocal lattice and the first Brillouin zone in k-space, and (3) the quantum behavior of electrons, Pauli's exclusion principle, and the Fermi-Dirac distribution function.
- Use these basic concepts to explain crystal structure, x-ray diffraction, lattice vibrations, behavior of electrons in metals and semiconductors, and thermal, magnetic, dielectric and optical properties of materials.
- Show their understanding of these topics and their underlying concepts by solving problems using a variety of mathematical tools.

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

**Course Outcomes**

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

or

CHEM 111 : Principles of Chemistry. (4:3:3)

OFFERED: Honors also.

WHEN TAUGHT: Fall

PREREQUISITE: Math 110 or equivalent.

RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.

DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.

NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

**Course Outcomes**

CHEM 112 : Principles of Chemistry. (3:3:2)

WHEN TAUGHT: Winter
PREREQUISITE: Chem 111 or Chem 105 or equivalent.
DESCRIPTION: Continuation of Chem 111.
NOTE: Tutorial included.

**Course Outcomes**

- Students will be able to use thermodynamic principles and their application to physical and chemical equilibria to calculate entropic and enthalpic contributions to physical changes and reactions and predict equilibria given entropic and enthalpic changes.
- Students will be able to apply acid-base theory, including interactions of strong and weak acids and bases, to determination of pH values of solutions, calculating buffering capacity and performance of acid-base titrations. They will be able to use structural features of molecules to estimate acid and base strength.
- Students will demonstrate an understanding of electrochemistry in designing simple electrodes and will use reduction/oxidation potentials to characterize electrodes.
- Students will be able to apply transition state theory to reaction kinetics. Students will be able to model mathematically rates of multiple reaction types.
- Students will be able to apply the periodic nature of the elements to classify elements and identify the compositions of inorganic salts.

*Microelectronics/Semiconductor Devices:*

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

PHSCS 281 : Principles of Solid State Physics. (3:3:1)

WHEN TAUGHT: Fall
PREREQUISITE: PHSCS 220; Phscs 121 or equivalent.
DESCRIPTION: Introduction to physics of solids, including laboratory experience.
NOTE: For students in science, computer science, technology, and engineering.

**Course Outcomes**

- Use the concepts of lattices, unit cells, and the atomic basis to describe the structure of crystals.
- Apply the concept of reciprocal lattices and the first Brillouin zone to arrive at conclusions about wave diffraction, dispersion graphs of lattice waves, and electron energy bands.
- Apply basic principles of quantum mechanics to describe the behavior of electrons in crystalline solids and describe the concepts of density of states, Pauli's exclusion principle, the Dirac distribution function, and band structure.
- Use the ideas of band structure to arrive at conclusions about the electrical properties of materials. Use the ideas of doping to arrive at conclusions about the electrical properties of semiconductors.

or
PHSCS 581 : Solid-State Physics. (3:3:0)

WHEN Winter

TAUGHT:

PREREQUISITE: Phscs 222 or equivalent.

DESCRIPTION: Introduction to the physics of solids. Crystal structure and symmetry, X-ray diffraction, lattice vibrations, metals and semiconductors, superconductivity, thermal properties, magnetic properties, and dielectric and optical properties.

**Course Outcomes**

- Explain the following basic concepts underlying the topics in solid state physics: (1) crystal symmetry, (2) reciprocal lattice and the first Brillouin zone in k-space, and (3) the quantum behavior of electrons, Pauli's exclusion principle, and the Fermi-Dirac distribution function.
- Use these basic concepts to explain crystal structure, x-ray diffraction, lattice vibrations, behavior of electrons in metals and semiconductors, and thermal, magnetic, dielectric and optical properties of materials.
- Show their understanding of these topics and their underlying concepts by solving problems using a variety of mathematical tools.

EC EN 450 : Introduction to Semiconductor Devices. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: EC EN 340

DESCRIPTION: Physics of electronic and optical solid state devices; includes semiconductor materials, bipolar and FET device physics and modeling, optical properties of semiconductors, and lasers.

**Course Outcomes**

- Application of basic physical processes to model p-n junctions.
- Application of differential equations to charge transport in semiconducting material.
- Application of the physical properties of device building blocks (pn junctions, metal semiconductor interfaces, MOS structures) to model MOSFET operation.
- Application of basic microfabrication processes to design semiconductor device fabrication process flows.

or

PHSCS 587 : Physics of Semiconductor Devices. (3:3.0:0.0)

WHEN TAUGHT: Fall Contact Department

PREREQUISITE: PHSCS 281; or PHSCS 581; or EC EN 450

DESCRIPTION: Device physics, with an in-depth study of the MOS transistor and other nanoscale computing devices.

**Course Outcomes**

- Identify the fundamental mechanisms and models of these mechanisms controlling the operation of semiconductor devices.
- Apply the fundamental mechanisms and models to the analysis of devices such as silicon mosfets, silicon on insulator transistors, carbon nanotube transistors, and graphene transistors.
- Find, read, and utilize contemporary semiconductor device physics literature to write reviews of this literature.

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

*Nuclear Physics (power generation for industry or navy):*

PHSCS 360 : Statistical and Thermal Physics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 222 & MATH 303; or PHSCS 222 & MATH 334

DESCRIPTION: Principles of statistical mechanics and thermodynamics, with applications.

**Course Outcomes**

- Use statistical arguments to explain thermodynamics from first principles, including heat flow and the increase of entropy. Apply these to solve quantitative problems in thermodynamics.
- Use thermodynamic potentials, e.g. the Helmholtz and Gibbs free energies, to predict equilibrium states in physical systems and predict phase transformations.
- Use simple models to explain physical phenomena in a variety of systems, including: classical and quantum ideal gases, magnetic systems, solids.

PHSCS 451 : Quantum Mechanics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 222 & PHSCS 318

DESCRIPTION: Analytical foundations of quantum mechanics.

**Course Outcomes**

- Understand the mechanics of operators, eigenstates and eigenvalues. Learn how to build wave functions, estimate expectation values and standard deviations, and apply the Heisenberg uncertainty principle.
- Manipulate the Schrödinger equation to solve for wave functions.
- Develop free-particle and bound-state solutions to the Schrödinger equation. (In particular, harmonic oscillator, infinite and finite square-well, finite barrier potentials…).
- Construct simple solutions for Hydrogen atom, angular momentum and spin systems, atoms and solids.

PHSCS 452 : Applications of Quantum Mechanics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 451

DESCRIPTION: Applications of quantum mechanics to atomic, molecular, statistical, condensed-matter, and nuclear physics; elementary particles.

**Course Outcomes**

- Apply techniques such as time-independent perturbation theory, variational methods, time-dependent perturbation theory, and scattering theory to quantum systems.
- Describe and quantify fine, hyperfine, and Zeeman level splittings in atoms.
- Characterize emission and absorption of radiation by atoms, and derive the associated selection rules.
- Solve quantum scattering and tunneling problems.

ME EN 422 : Applied Thermodynamics. (3:3:1)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: ME EN 321

DESCRIPTION: Applied engineering thermodynamics including air and steam power cycles, thermodynamic relations, and introduction to combustion and equilibrium chemical reactions.

**Course Outcomes**

- Evaluation of work potential using exergy concepts.
- Creation of gas and vapor power cycles.
- Creation of refrigeration cycles.
- Application of thermodynamic property relations.
- Evaluation of problems involving gas mixtures.
- Analysis of thermodynamic problems involving chemical reactions.

*Optical Communication Engineering:*

PHSCS 471 : Principles of Optics. (3:3:1)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 121 & PHSCS 220 & MATH 302; or PHSCS 121 & PHSCS 220 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Phscs 318.

DESCRIPTION: Electromagnetic wave phenomena, including polarization effects, interference, coherence, dispersion, ray theory, diffraction; introduction to quantum nature of light. Laboratory component emphasizes applications.

**Course Outcomes**

- Use mathematical and conceptual descriptions of propagation of light in matter, reflection/transmission at boundaries, polarization effects, interference, dispersion, coherence, image formation, diffraction, and quantum aspects of light to analyze and predict optical phenomena.
- Manipulate and measure properties of light in a laboratory setting.
- Apply mathematical tools such as vector calculus, complex numbers, matrices, and Fourier transforms (1D and 2D) to optical problems.

PHSCS 571 : Lasers and Atoms. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Phscs 451, 471; or equivalents.

DESCRIPTION: Laser amplification, cavity design, and control and characterization of temporal and spatial modes. Interactions between lasers and atoms.

**Course Outcomes**

- Design stable laser resonators, frequency-locking feedback systems, and pulsed-output mode-locking systems.
- Measure durations of femtosecond pulses and the line width and center frequency of frequency-stabilized sources.
- Compute cavity threshold gain, optimal output coupling, and gain saturation.
- Describe interactions of light and matter within a semi-classical two-level-atom framework.
- Compute cross sections and selection rules for transitions in hydrogen.

EC EN 380 : Signals and Systems. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: EC EN 240 & MATH 334

DESCRIPTION: Time and frequency domain analysis of discrete or continuous systems subjected to periodic or nonperiodic input signals.

**Course Outcomes**

- Application of integral calculus, differential equations, complex variables, to transform analysis of a continuous-time LTI system.
- Application of integral calculus, differential equations, complex variables, to transform analysis of a discrete-time LTI system.
- Application of integral calculus to solve continuous-time convolution problems.
- Application of discrete math to solve discrete-time convolution problems.
- Ability to use Matlab or similar tools to analyze, model, simulate, and experiment with linear systems.
- Ability to interpret and synthesize signals and systems in both the time and frequency domains.
- Ability to recognize the mathematical properties of signals and systems including linearity, time invariance, causality, stability, etc.
- An understanding of the consequences and principles associated with digitally sampling and reconstructing analog signals.

EC EN 466 : Introduction to Optical Engineering. (2:3:1)

PREREQUISITE: EC EN 462

DESCRIPTION: Introduces principles and practices of optical engineering including optical communications system and components.

**Course Outcomes**

- Application of differential equations to solve metallic and dielectric waveguide problems.
- Application of integral calculus to solve diffraction problems.
- Application of linear algebra to find propagation characteristics in anisotropic media.
- Ability to apply modern optical test equipment to measure optical communication system parameters.

EC EN 555 : Optoelectronic Devices. (3:2:1)

WHEN TAUGHT: Fall

PREREQUISITE: ECEn 450 or equivalent or instructor's consent.

DESCRIPTION: Design, operation, and fabrication of modern optoelectronic devices, including photodiodes, photovoltaics, LEDs, and lasers.

**Course Outcomes**

- Use principles of physics to analyze and design the following optoelectronic components – LEDs, lasers, photodiodes, and photovoltaics.
- Be familiar with the tools and processes used in fabricating the following optoelectronic components - LEDs, lasers, photodiodes, and photovoltaics.
- Understand metrics of optoelectronics devices and be able to incorporate them into systems for optimal performance.

EC EN 562 : Optical Communication Components and Systems. (3:3:0)

PREREQUISITE: EC En 462, 466; or equivalents.

DESCRIPTION: Fiber-optic communication system components and their operating and performance characteristics.

**Course Outcomes**

- Learn the fundamental properties of optical fiber channels, sources and detectors.
- Design an optical fiber system while considering the bandwidth, distance required, and expense.
- Examine a topic of current interest in optical systems and make an oral presentation to the class.
- Become familiar with the modern test and evaluation tools for fiber optic systems, including the OTDR Time Domain Reflectometer (OTDR), Optical Spectrum Analyzer (OSA), and Optical Oscilloscopes for eye diagram analysis.

*Optical/Laser Engineering:*

PHSCS 442 : Electrodynamics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 441

DESCRIPTION: Maxwell's equations, radiation, interaction of electromagnetic fields with matter, and special relativity.

**Course Outcomes**

- Demonstrate the ability to calculate time-dependent electric fields using Faraday's law and the ability to calculate time-dependent magnetic fields using Maxwell's displacement current.
- Demonstrate the ability to solve problems involving electric and magnetic energy densities and the Maxwell stress tensor.
- Demonstrate the ability to use Maxwell's equations to solve problems involving electromagnetic waves in vacuum and in matter.
- Demonstrate the ability to use the concept of retarded time to compute radiation potentials.
- Demonstrate the ability to solve problems involving the special theory of relativity, including 4-vectors, form invariance, and the electromagnetic field tensor.

PHSCS 471 : Principles of Optics. (3:3:1)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 121 & PHSCS 220 & MATH 302; or PHSCS 121 & PHSCS 220 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Phscs 318.

DESCRIPTION: Electromagnetic wave phenomena, including polarization effects, interference, coherence, dispersion, ray theory, diffraction; introduction to quantum nature of light. Laboratory component emphasizes applications.

**Course Outcomes**

- Use mathematical and conceptual descriptions of propagation of light in matter, reflection/transmission at boundaries, polarization effects, interference, dispersion, coherence, image formation, diffraction, and quantum aspects of light to analyze and predict optical phenomena.
- Manipulate and measure properties of light in a laboratory setting.
- Apply mathematical tools such as vector calculus, complex numbers, matrices, and Fourier transforms (1D and 2D) to optical problems.

and/or

PHSCS 571 : Lasers and Atoms. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Phscs 451, 471; or equivalents.

DESCRIPTION: Laser amplification, cavity design, and control and characterization of temporal and spatial modes. Interactions between lasers and atoms.

**Course Outcomes**

- Design stable laser resonators, frequency-locking feedback systems, and pulsed-output mode-locking systems.
- Measure durations of femtosecond pulses and the line width and center frequency of frequency-stabilized sources.
- Compute cavity threshold gain, optimal output coupling, and gain saturation.
- Describe interactions of light and matter within a semi-classical two-level-atom framework.
- Compute cross sections and selection rules for transitions in hydrogen.

EC EN 466 : Introduction to Optical Engineering. (2:3:1)

PREREQUISITE: EC EN 462

DESCRIPTION: Introduces principles and practices of optical engineering including optical communications system and components.

**Course Outcomes**

- Application of differential equations to solve metallic and dielectric waveguide problems.
- Application of integral calculus to solve diffraction problems.
- Application of linear algebra to find propagation characteristics in anisotropic media.
- Ability to apply modern optical test equipment to measure optical communication system parameters.

EC EN 555 : Optoelectronic Devices. (3:2:1)

WHEN TAUGHT: Fall

PREREQUISITE: ECEn 450 or equivalent or instructor's consent.

DESCRIPTION: Design, operation, and fabrication of modern optoelectronic devices, including photodiodes, photovoltaics, LEDs, and lasers.

**Course Outcomes**

- Use principles of physics to analyze and design the following optoelectronic components – LEDs, lasers, photodiodes, and photovoltaics.
- Be familiar with the tools and processes used in fabricating the following optoelectronic components - LEDs, lasers, photodiodes, and photovoltaics.
- Understand metrics of optoelectronics devices and be able to incorporate them into systems for optimal performance.

and/or

EC EN 562 : Optical Communication Components and Systems. (3:3:0)

PREREQUISITE: EC En 462, 466; or equivalents.

DESCRIPTION: Fiber-optic communication system components and their operating and performance characteristics.

**Course Outcomes**

- Learn the fundamental properties of optical fiber channels, sources and detectors.
- Design an optical fiber system while considering the bandwidth, distance required, and expense.
- Examine a topic of current interest in optical systems and make an oral presentation to the class.

- Become familiar with the modern test and evaluation tools for fiber optic systems, including the OTDR Time Domain Reflectometer (OTDR), Optical Spectrum Analyzer (OSA), and Optical Oscilloscopes for eye diagram analysis.

*Premedicine, Prelaw (including patent law), Prebusiness:*

Courses in specialty.

*Hours include courses that may fulfill university core requirements.

1. No more than 3 hours of D credit is allowed in major courses.
2. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special

relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 140 : Electronics Lab. (1:1:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Introduction to analog and digital circuits.

**Course Outcomes**

- Build and debug basic analog circuits that are of practical use in experimental physics such as voltage dividers, diode rectifiers, inverting and non-inverting op amp circuits, and transistor switches.
- Demonstrate understanding of electrical concepts of voltage, current, resistance, power, and input and output resistance through the analysis of simple circuits.
- Demonstrate proper use and limitations of electrical sources and test equipment including DC power supplies, multimeters, oscilloscopes, and function generators.
- Build and debug basic digital circuits that use components such as digital gates, flipflops, counters, and digital to analog converters.

PHSCS 145 : Experimental Methods in Physics. (1:0:3)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: PHSCS 140; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physical measurement and analysis, optics, sensors, actuators, and computer-based data acquisition.

**Course Outcomes**

- Demonstrate good practices in experimental physics documentation and communication such as data collection, record keeping, and presentation.
- Demonstrate the ability to analyze experimental data this includes techniques such as error estimation, error propagation, model selection, and curve fitting.
- Use simple optical devices (e.g. lenses, mirrors, slits and gratings, polarizers) to explore the geometric and wave properties of light.
- Apply AC concepts such as frequency response, frequency filtering, fourier transform analysis, and impedance to sinusoidally-driven electrical, mechanical, optical, and acoustical systems.

PHSCS 191 : Introduction to Physics Careers and Research 1. (.5:1:0)

DESCRIPTION: Survey of BYU undergraduate physics and astronomy programs, careers in physics and astronomy, and current physics and astronomy research.

NOTE: Take first semester after registered as physics major.

**Course Outcomes**

- Describe the major subfields of physics and the breadth of interdisciplinary research to which physicists contribute.
- Describe examples of current research in physics or astronomy, explaining what questions are being asked by the investigators and why these questions are interesting.
- Describe career opportunities available in physics and astronomy and the specific preparation necessary for these careers.
- Develop a draft of an educational plan for both undergraduate and graduate training.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

PHSCS 222 : Modern Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Quantum physics, atoms, molecules, condensed matter, nuclei, elementary particles, and selected topics in contemporary physics.

**Course Outcomes**

- Demonstrate their understanding of the fundamental postulates and principles of special relativity and quantum mechanics.
- Apply the principles of quantum mechanics to predict the results of measurements in simple systems such as a free particle, simple potential wells, and central potentials.
- Solve problems and answer conceptual questions applying the principles of quantum mechanics and special relativity to topics in modern physics such as atomic physics, molecular physics, the physics of solids, statistical physics, nuclear physics, radioactivity, and particle physics.

PHSCS 230 : Computational Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 113

DESCRIPTION: Introduction to numerical and symbolic computation and graphical analysis using a symbolic mathematics program. Applications to mechanics, optics, and special relativity.

**Course Outcomes**

- Demonstrate the ability to apply calculus, linear algebra, and complex analysis to solve undergraduate-level physics problems.
- Demonstrate the ability to use programming constructs such as looping, conditional execution, and iteration to solve physics problems.
- Solve equations, including systems of equation, related to physical phenomena both symbolically and numerically.
- Demonstrate the ability to visualize, analyze, and interpret equations, data, and physical models.

PHSCS 240 : Design, Fabrication, and Use of Scientific Apparatus. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 145

DESCRIPTION: Machining, computer interfacing, controls, and vacuum systems.

**Course Outcomes**

- Design, build, and interface experimental apparatus.
- Make involved physical measurements and analyze experimental results.
- Document in a personal lab notebook the procedures, methods, results, and analysis of laboratory exercises.
- Present work in writing and through oral presentations.
- Demonstrate understanding of professional ethics guidelines for research activities and presentation of results.

PHSCS 245 : Experiments in Contemporary Physics. (2:0:6)

WHEN TAUGHT: Fall; Winter; Spring Odd Yrs.

PREREQUISITE: PHSCS 220 & PHSCS 240

DESCRIPTION: In-depth, multi-period experiments in contemporary physics, using advanced instrumentation.

**Course Outcomes**

- Demonstrate the use and assembly of experimental systems using contemporary instrumentation components to perform experiments in areas such as coherent optical systems, microfabrication, and vacuum systems.
- Independently design and carry out multi-period in-depth projects.
- Present research results through oral presentations.

PHSCS 291 : Introduction to Physics Careers and Research 2. (.5:1:0)

PREREQUISITE: PHSCS 123; Phscs 191 or concurrent enrollment.

DESCRIPTION: Career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law, and business. Personal planning for research or internship involvement.

NOTE: Take first semester as a sophomore.

**Course Outcomes**

- Describe career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law and business.
- Learn how to prepare for and succeed in such careers from physicists working in them.
- Develop a plan for research or internship involvement.
- Develop a plan for graduate school (if the student's career path requires it).

PHSCS 318 : Introduction to Mathematical Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 303 & PHSCS 230; or MATH 334 & PHSCS 230

DESCRIPTION: Partial differential equations, classical field equations, algebra of complex variables, Fourier analysis, integral transforms, and orthogonal functions.

**Course Outcomes**

- Solve partial differential equations in Cartesian, cylindrical, and spherical coordinates using separation of variables and expansions in orthogonal functions. Apply boundary conditions appropriate for physical systems.
- Perform algebraic computations involving complex numbers and functions.
- Use the properties (such as recursion relations, derivative relationships, and orthogonality conditions) of various special functions, including trigonometric functions, Bessel functions, and Legendre polynomials to solve problems involving those functions.
- Use Fourier series and transforms to expand functions and solve partial differential equations on appropriate domains.

PHSCS 321 : Mechanics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 121 & PHSCS 230 & MATH 302; or PHSCS 121 & PHSCS 230 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Concurrent enrollment in Phscs 330.

DESCRIPTION: Newton's laws applied to particles and systems of particles, including rigid bodies. Conservation principles and Lagrange's and Hamilton's equations.

**Course Outcomes**

- Use Newtonian mechanics with forces and torques to solve problems in Cartesian and curvilinear coordinates.
- Solve mechanics problems using work-energy, and conservation of energy, momentum and angular momentum.
- Solve and analyze rigid-body problems and problems in non-inertial frames.
- Use Lagrangian and Hamiltonian mechanics to obtain the equations of motion for a variety of problems, including the use of generalized coordinates and cyclic coordinates.
- Use perturbation and similar techniques to linearize equations of motion to analyze stability and study coupled systems using normal modes.

PHSCS 330 : Computational Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 121 & PHSCS 230; Math 303 or 334 or equivalent; CS 142 or equivalent.

DESCRIPTION: Numerical solution of ordinary differential equations, linear algebra and eigenvalues, chaos theory. Applications to dynamics. Introduction to programming in Matlab.

**Course Outcomes**

- Demonstrate proficiency in using MATLAB and show that the student can write working programs.
- Be able to qualitatively explain how differential equations generate their solution curves.
- Use a symbolic mathematics programs and MATLAB to solve ordinary differential equations to simulate dynamical systems.

PHSCS 360 : Statistical and Thermal Physics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 222 & MATH 303; or PHSCS 222 & MATH 334

DESCRIPTION: Principles of statistical mechanics and thermodynamics, with applications.

**Course Outcomes**

- Use statistical arguments to explain thermodynamics from first principles, including heat flow and the increase of entropy. Apply these to solve quantitative problems in thermodynamics.
- Use thermodynamic potentials, e.g. the Helmholtz and Gibbs free energies, to predict equilibrium states in physical systems and predict phase transformations.
- Use simple models to explain physical phenomena in a variety of systems, including: classical and quantum ideal gases, magnetic systems, solids.

PHSCS 430 : Computational Physics Lab 3. (1:0:3)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 222 & PHSCS 318 & PHSCS 330

DESCRIPTION: Static and dynamic boundary value problems, partial differential equations. Applications in electrostatics, thermodynamics, waves, and quantum mechanics. Programming with Matlab.

**Course Outcomes**

- Numerically solve physics problems involving partial differential equations using Mathematica and MATLAB.
- Apply the basic programming concepts of looping and conditional branching to numerical problems.

PHSCS 441 : Electrostatics and Magnetism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 220 & PHSCS 318

DESCRIPTION: Classical theory of static electric and magnetic fields.

**Course Outcomes**

- Demonstrate the ability to apply the concepts of vector calculus as used in Maxwell's equations.
- Demonstrate the ability to integrate over a source distribution to calculate time-independent fields and potentials for both electricity and magnetism. Also demonstrate the ability to use Gauss's law and Amperes law to find electric and magnetic fields in symmetric situations.
- Demonstrate the ability to use vacuum harmonics, image charges, and image currents to solve for time-independent electric and magnetic potentials and fields.
- Demonstrate the ability to calculate electric and magnetic fields in the presence of matter which can be electrically and magnetically polarized, including the ability to solve problems involving torques and potential energies of electric and magnetic dipoles.

PHSCS 442 : Electrodynamics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 441

DESCRIPTION: Maxwell's equations, radiation, interaction of electromagnetic fields with matter, and special relativity.

**Course Outcomes**

- Demonstrate the ability to calculate time-dependent electric fields using Faraday's law and the ability to calculate time-dependent magnetic fields using Maxwell's displacement current.
- Demonstrate the ability to solve problems involving electric and magnetic energy densities and the Maxwell stress tensor.
- Demonstrate the ability to use Maxwell's equations to solve problems involving electromagnetic waves in vacuum and in matter.
- Demonstrate the ability to use the concept of retarded time to compute radiation potentials.

- Demonstrate the ability to solve problems involving the special theory of relativity, including 4-vectors, form invariance, and the electromagnetic field tensor.

PHSCS 451 : Quantum Mechanics. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: PHSCS 222 & PHSCS 318
DESCRIPTION: Analytical foundations of quantum mechanics.

**Course Outcomes**

- Understand the mechanics of operators, eigenstates and eigenvalues. Learn how to build wave functions, estimate expectation values and standard deviations, and apply the Heisenberg uncertainty principle.
- Manipulate the Schrödinger equation to solve for wave functions.
- Develop free-particle and bound-state solutions to the Schrödinger equation. (In particular, harmonic oscillator, infinite and finite square-well, finite barrier potentials…).
- Construct simple solutions for Hydrogen atom, angular momentum and spin systems, atoms and solids.

PHSCS 452 : Applications of Quantum Mechanics. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: PHSCS 451
DESCRIPTION: Applications of quantum mechanics to atomic, molecular, statistical, condensed-matter, and nuclear physics; elementary particles.

**Course Outcomes**

- Apply techniques such as time-independent perturbation theory, variational methods, time-dependent perturbation theory, and scattering theory to quantum systems.
- Describe and quantify fine, hyperfine, and Zeeman level splittings in atoms.
- Characterize emission and absorption of radiation by atoms, and derive the associated selection rules.
- Solve quantum scattering and tunneling problems.

PHSCS 471 : Principles of Optics. (3:3:1)
WHEN TAUGHT: Winter; Summer
PREREQUISITE: PHSCS 121 & PHSCS 220 & MATH 302; or PHSCS 121 & PHSCS 220 & MATH 314; Math 303 or 334 or concurrent enrollment.
RECOMMENDED: Phscs 318.
DESCRIPTION: Electromagnetic wave phenomena, including polarization effects, interference, coherence, dispersion, ray theory, diffraction; introduction to quantum nature of light. Laboratory component emphasizes applications.

**Course Outcomes**

- Use mathematical and conceptual descriptions of propagation of light in matter, reflection/transmission at boundaries, polarization effects, interference, dispersion, coherence, image formation, diffraction, and quantum aspects of light to analyze and predict optical phenomena.
- Manipulate and measure properties of light in a laboratory setting.
- Apply mathematical tools such as vector calculus, complex numbers, matrices, and Fourier transforms (1D and 2D) to optical problems.

**Note:** Phscs 191 should be taken the first semester as a freshman. Phscs 291 should be taken the first semester as a sophomore.

3. Complete one of the following options:

**Either**

MATH 113 : Calculus 2. (4:5:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 302 : Mathematics for Engineering 1. (4:4:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 113.
DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the

mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

**Or**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

4. Complete one course from the following:

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 302
DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 113 and Math 313.
DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

5. Complete a senior thesis, including the following:
   a. Choose a research mentor and group as early as possible, starting with information in Phscs 191 and 291, and discussions with faculty, your advisor, and senior thesis coordinator. It is best to start as a freshman or sophomore.

Interdisciplinary work in other departments or in internships is possible.

b. Complete two hours of the following

PHSCS 498R : Senior Thesis. (.5-3:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Conducting and reporting research under a department faculty mentor or other professionals.

NOTE: Thesis topic must be cleared by faculty member before registration.

**Course Outcomes**

- Perform significant research in physics or astronomy under the direction of a faculty or internship mentor.
- Present their research in a written document that follows professional standards in the field.
- Do the above within professional ethical standards.

- **Note 1:** Students planning careers in experimental, applied, or industrial physics should complete STAT 201.
- **Note 2:** All students will benefit, through courses or individual study, by learning programming skills and numerical methods beyond what you are taught in C S 142 and our computational physics courses. Consider the following: C S courses, MATH 410, ME EN 373.
- **Note 3:** Students planning graduate school in physics should learn complex analysis. Consider the following: MATH 332, PHSCS 601, 602.

*Hours include courses that may fulfill university core requirements.

1. No more than 3 hours of D credit is allowed in major courses.
2. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special

relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 127 : Descriptive Astronomy. (3:3:1)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

PHSCS 191 : Introduction to Physics Careers and Research 1. (.5:1:0)

DESCRIPTION: Survey of BYU undergraduate physics and astronomy programs, careers in physics and astronomy, and current physics and astronomy research.
NOTE: Take first semester after registered as physics major.

**Course Outcomes**

- Describe the major subfields of physics and the breadth of interdisciplinary research to which physicists contribute.
- Describe examples of current research in physics or astronomy, explaining what questions are being asked by the investigators and why these questions are interesting.
- Describe career opportunities available in physics and astronomy and the specific preparation necessary for these careers.
- Develop a draft of an educational plan for both undergraduate and graduate training.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: MATH 113; Phscs 121 or equivalent.
DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

PHSCS 222 : Modern Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: PHSCS 123 & PHSCS 220; Phscs 121 or equivalent.
DESCRIPTION: Quantum physics, atoms, molecules, condensed matter, nuclei, elementary particles, and selected topics in contemporary physics.

**Course Outcomes**

- Demonstrate their understanding of the fundamental postulates and principles of special relativity and quantum mechanics.
- Apply the principles of quantum mechanics to predict the results of measurements in simple systems such as a free particle, simple potential wells, and central potentials.
- Solve problems and answer conceptual questions applying the principles of quantum mechanics and special relativity to topics in modern physics such as atomic physics, molecular physics, the physics of solids, statistical physics, nuclear physics, radioactivity, and particle physics.

PHSCS 227 : Solar System Astronomy. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: PHSCS 121; Math 112 or equivalent; Phscs 127 or concurrent.
DESCRIPTION: Solar-system dynamics, planetary surfaces and atmospheres. Analysis of stellar data from telescopes, spectrometers and photometers. Interaction of light with atoms and molecules. Extrasolar planets.

**Course Outcomes**

- Solve elementary problems in classical celestial mechanics and in the interaction of light with atoms and molecules.
- Describe the differences between the planets and moons and how these differences provide clues as to their formation history.
- Use observational data of binary stars to determine fundamental stellar parameters, and apply understanding to characterize other stars.
- Describe various telescopes and how they are used with detectors for photometry and spectroscopy.

PHSCS 228 : Stellar and Extragalactic Astronomy. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: PHSCS 227
DESCRIPTION: Stellar atmospheres, stellar interiors, stellar evolution, interstellar matter, galactic structure, external galaxies, and cosmology.

**Course Outcomes**

- Display a qualitative and simple quantitative understanding of the role of the interstellar medium in star formation, stellar structure and evolution;
- Demonstrate an understanding of stellar populations and galactic structure;
- Display a knowledge of the basic properties of galaxies;
- Display a qualitative grasp of up-to-date observational cosmology and solve elementary problems in theoretical cosmology.

PHSCS 230 : Computational Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 113

DESCRIPTION: Introduction to numerical and symbolic computation and graphical analysis using a symbolic mathematics program. Applications to mechanics, optics, and special relativity.

**Course Outcomes**

- Demonstrate the ability to apply calculus, linear algebra, and complex analysis to solve undergraduate-level physics problems.
- Demonstrate the ability to use programming constructs such as looping, conditional execution, and iteration to solve physics problems.
- Solve equations, including systems of equation, related to physical phenomena both symbolically and numerically.
- Demonstrate the ability to visualize, analyze, and interpret equations, data, and physical models.

PHSCS 291 : Introduction to Physics Careers and Research 2. (.5:1:0)

PREREQUISITE: PHSCS 123; Phscs 191 or concurrent enrollment.

DESCRIPTION: Career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law, and business. Personal planning for research or internship involvement.

NOTE: Take first semester as a sophomore.

**Course Outcomes**

- Describe career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law and business.
- Learn how to prepare for and succeed in such careers from physicists working in them.
- Develop a plan for research or internship involvement.
- Develop a plan for graduate school (if the student's career path requires it).

PHSCS 318 : Introduction to Mathematical Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 303 & PHSCS 230; or MATH 334 & PHSCS 230

DESCRIPTION: Partial differential equations, classical field equations, algebra of complex variables, Fourier analysis, integral transforms, and orthogonal functions.

**Course Outcomes**

- Solve partial differential equations in Cartesian, cylindrical, and spherical coordinates using separation of variables and expansions in orthogonal functions. Apply boundary conditions appropriate for physical systems.
- Perform algebraic computations involving complex numbers and functions.
- Use the properties (such as recursion relations, derivative relationships, and orthogonality conditions) of various special functions, including trigonometric functions, Bessel functions, and Legendre polynomials to solve problems involving those functions.
- Use Fourier series and transforms to expand functions and solve partial differential equations on appropriate domains.

PHSCS 321 : Mechanics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 121 & PHSCS 230 & MATH 302; or PHSCS 121 & PHSCS 230 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Concurrent enrollment in Phscs 330.

DESCRIPTION: Newton's laws applied to particles and systems of particles, including rigid bodies. Conservation principles and Lagrange's and Hamilton's equations.

**Course Outcomes**

- Use Newtonian mechanics with forces and torques to solve problems in Cartesian and curvilinear coordinates.
- Solve mechanics problems using work-energy, and conservation of energy, momentum and angular momentum.
- Solve and analyze rigid-body problems and problems in non-inertial frames.
- Use Lagrangian and Hamiltonian mechanics to obtain the equations of motion for a variety of problems, including the use of generalized coordinates and cyclic coordinates.
- Use perturbation and similar techniques to linearize equations of motion to analyze stability and study coupled systems using normal modes.

PHSCS 329 : Observational Astronomy. (3:2:4)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 127

DESCRIPTION: Basic techniques of observational astronomy, emphasizing practical experience in optical data

acquisition and analysis.

NOTE: See instructor about proficiency exam if you have taken Phscs 127 equivalent.

**Course Outcomes**

- Obtain publication quality astronomical data (photometric data) using a telescope and CCD camera.
- Process raw data and extract astrophysically significant information from data about astronomical objects.
- Interpret data obtained and present results in astronomical publication format written in AASTeX.
- Prepare a request for external telescope time.
- Follow professional ethics guidelines in research activities and presentation of results.

PHSCS 330 : Computational Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 121 & PHSCS 230; Math 303 or 334 or equivalent; CS 142 or equivalent.

DESCRIPTION: Numerical solution of ordinary differential equations, linear algebra and eigenvalues, chaos theory. Applications to dynamics. Introduction to programming in Matlab.

**Course Outcomes**

- Demonstrate proficiency in using MATLAB and show that the student can write working programs.
- Be able to qualitatively explain how differential equations generate their solution curves.
- Use a symbolic mathematics programs and MATLAB to solve ordinary differential equations to simulate dynamical systems.

PHSCS 427 : Introduction to Astrophysics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 227 & PHSCS 228

DESCRIPTION: Principles and observational techniques of astrophysics.

**Course Outcomes**

- Represent sky positions and kinematics using basic astronomical spatial and time coordinates. Transform coordinates, motions and times between coordinate systems. Explain at least ten reasons why sky positions change, and make corrections for those which are purely apparent.
- Manipulate basic stellar spectral data, represent such data in and interpret the HR-diagram and kindred color-magnitude and color-color diagrams, explaining their relation to theoretical temperature-luminosity diagrams. Explain how these serve as tools in studies of stars and the interstellar medium.
- Explain the stellar luminosity function, describe its determination, explain the difficulties encountered in its determination, and explain why the actual stellar content of the galaxy is so different from the counting samples we obtain, either with the naked eye or telescopically.
- Describe the most commonly used types of telescopes (visual and non-visual) and auxiliary instruments (including detectors) and be able to calculate their performance characteristics. Explain the advantages and disadvantages of different types and configurations of instruments. Describe and explain the considerations of observatory site selection.
- Interpret and use in solving simple problems the Planck function, the Maxwellian kinematic distributions, and the Boltzmann, Saha, and molecular-disassociation equations.

PHSCS 428 : Introduction to Astrophysics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 227 & PHSCS 228

DESCRIPTION: Principles and observational techniques of astrophysics.

**Course Outcomes**

- Explain and apply the basic laws and conventions of atomic spectroscopy.
- Explain and apply fundamental radiation laws for both continuum and discrete line processes. Relate line emission and absorption coefficients to the Einstein coefficients. Be familiar with the equation of transfer and solve it for the interstellar medium and an Eddington model atmosphere. Explain stellar limb darkening.
- Describe the physical mechanisms that broaden and shape line absorption coefficients and show how to convolve various combinations of coefficient profiles. Then explain the changes that occur in a line profile as causative conditions change. Explain why an actual line profile is proportional in shape to its absorption coefficient profile in weak but not in strong lines.
- Use curve-of-growth analysis to determine stellar composition.
- Explain and quantify the degradation of stellar spectra by terrestrial atmospheric absorption, scattering and refraction.

PHSCS 441 : Electrostatics and Magnetism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 220 & PHSCS 318

DESCRIPTION: Classical theory of static electric and magnetic fields.

**Course Outcomes**

- Demonstrate the ability to apply the concepts of vector calculus as used in Maxwell's equations.
- Demonstrate the ability to integrate over a source distribution to calculate time-independent fields and potentials for both electricity and magnetism. Also demonstrate the ability to use Gauss's law and Amperes law to find electric and magnetic fields in symmetric situations.
- Demonstrate the ability to use vacuum harmonics, image charges, and image currents to solve for time-independent electric and magnetic potentials and fields.
- Demonstrate the ability to calculate electric and magnetic fields in the presence of matter which can be electrically and magnetically polarized, including the ability to solve problems involving torques and potential energies of electric and magnetic dipoles.

PHSCS 451 : Quantum Mechanics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 222 & PHSCS 318

DESCRIPTION: Analytical foundations of quantum mechanics.

**Course Outcomes**

- Understand the mechanics of operators, eigenstates and eigenvalues. Learn how to build wave functions, estimate expectation values and standard deviations, and apply the Heisenberg uncertainty principle.
- Manipulate the Schrödinger equation to solve for wave functions.
- Develop free-particle and bound-state solutions to the Schrödinger equation. (In particular, harmonic oscillator, infinite and finite square-well, finite barrier potentials…).
- Construct simple solutions for Hydrogen atom, angular momentum and spin systems, atoms and solids.

**Note:** Phscs 191 should be taken the first semester as a freshman. Phscs 291 should be taken the first semester as a sophomore.

3. Complete two courses from the following:

PHSCS 360 : Statistical and Thermal Physics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 222 & MATH 303; or PHSCS 222 & MATH 334

DESCRIPTION: Principles of statistical mechanics and thermodynamics, with applications.

**Course Outcomes**

- Use statistical arguments to explain thermodynamics from first principles, including heat flow and the increase of entropy. Apply these to solve quantitative problems in thermodynamics.
- Use thermodynamic potentials, e.g. the Helmholtz and Gibbs free energies, to predict equilibrium states in physical systems and predict phase transformations.
- Use simple models to explain physical phenomena in a variety of systems, including: classical and quantum ideal gases, magnetic systems, solids.

PHSCS 442 : Electrodynamics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 441

DESCRIPTION: Maxwell's equations, radiation, interaction of electromagnetic fields with matter, and special relativity.

**Course Outcomes**

- Demonstrate the ability to calculate time-dependent electric fields using Faraday's law and the ability to calculate time-dependent magnetic fields using Maxwell's displacement current.
- Demonstrate the ability to solve problems involving electric and magnetic energy densities and the Maxwell stress tensor.
- Demonstrate the ability to use Maxwell's equations to solve problems involving electromagnetic waves in vacuum and in matter.
- Demonstrate the ability to use the concept of retarded time to compute radiation potentials.
- Demonstrate the ability to solve problems involving the special theory of relativity, including 4-vectors, form invariance, and the electromagnetic field tensor.

PHSCS 452 : Applications of Quantum Mechanics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 451

DESCRIPTION: Applications of quantum mechanics to atomic, molecular, statistical, condensed-matter, and nuclear physics; elementary particles.

**Course Outcomes**

- Apply techniques such as time-independent perturbation theory, variational methods, time-dependent perturbation theory, and scattering theory to quantum systems.
- Describe and quantify fine, hyperfine, and Zeeman level splittings in atoms.
- Characterize emission and absorption of radiation by atoms, and derive the associated selection rules.
- Solve quantum scattering and tunneling problems.

PHSCS 471 : Principles of Optics. (3:3:1)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 121 & PHSCS 220 & MATH 302; or PHSCS 121 & PHSCS 220 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Phscs 318.

DESCRIPTION: Electromagnetic wave phenomena, including polarization effects, interference, coherence, dispersion, ray theory, diffraction; introduction to quantum nature of light. Laboratory component emphasizes applications.

**Course Outcomes**

- Use mathematical and conceptual descriptions of propagation of light in matter, reflection/transmission at boundaries, polarization effects, interference, dispersion, coherence, image formation, diffraction, and quantum aspects of light to analyze and predict optical phenomena.
- Manipulate and measure properties of light in a laboratory setting.
- Apply mathematical tools such as vector calculus, complex numbers, matrices, and Fourier transforms (1D and 2D) to optical problems.

4. Complete one of the following options:

**Either**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 302 : Mathematics for Engineering 1. (4:4:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 113.
DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

**Or**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore

fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

5. Complete one course from the following:

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 302

DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 113 and Math 313.

DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

6. Complete a senior thesis, including the following:
   a. Choose a research mentor and group as early as possible, starting with information in Phscs 191 and 291, and discussions with faculty, your advisor, and the senior thesis coordinator. It is best to start as a freshman or sophomore. Some internships may qualify for your project.
   b. Complete two hours of the following

PHSCS 498R : Senior Thesis. (.5-3:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Conducting and reporting research under a department faculty mentor or other professionals.

NOTE: Thesis topic must be cleared by faculty member before registration.

**Course Outcomes**

- Perform significant research in physics or astronomy under the direction of a faculty or internship mentor.
- Present their research in a written document that follows professional standards in the field.
- Do the above within professional ethical standards.

- **Note:** Students planning on graduate school in astronomy should consider taking all four of PHSCS 360, 442, 452, 471, instead of only two. Gain statistics and computer programming skills beyond what you get in this major by taking courses such as STAT 201 (Statistics for Engineers and Scientists) and courses such as PHSCS 430 (Computational Physics 3), and ME EN 373 (Introduction to Scientific Computing).

*Hours include courses that may fulfill university core requirements.

*This major is designed to prepare students to teach in public schools. In order to graduate with this major, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.*

## Program Requirements | View MAP | View Program Outcomes

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.
2. Contact Education Student Services for entrance requirements into the licensure program.
3. A teaching minor is not required for licensure. However, it is strongly recommended.
4. Complete the following:

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 127 : Descriptive Astronomy. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

PHSCS 140 : Electronics Lab. (1:1:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Introduction to analog and digital circuits.

**Course Outcomes**

- Build and debug basic analog circuits that are of practical use in experimental physics such as voltage dividers, diode rectifiers, inverting and non-inverting op amp circuits, and transistor switches.
- Demonstrate understanding of electrical concepts of voltage, current, resistance, power, and input and output resistance through the analysis of simple circuits.
- Demonstrate proper use and limitations of electrical sources and test equipment including DC power supplies, multimeters, oscilloscopes, and function generators.
- Build and debug basic digital circuits that use components such as digital gates, flipflops, counters, and digital to analog converters.

PHSCS 145 : Experimental Methods in Physics. (1:0:3)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: PHSCS 140; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physical measurement and analysis, optics, sensors, actuators, and computer-based data acquisition.

**Course Outcomes**

- Demonstrate good practices in experimental physics documentation and communication such as data collection, record keeping, and presentation.
- Demonstrate the ability to analyze experimental data this includes techniques such as error estimation, error propagation, model selection, and curve fitting.
- Use simple optical devices (e.g. lenses, mirrors, slits and gratings, polarizers) to explore the geometric and wave properties of light.
- Apply AC concepts such as frequency response, frequency filtering, fourier transform analysis, and impedance to sinusoidally-driven electrical, mechanical, optical, and acoustical systems.

PHSCS 191 : Introduction to Physics Careers and Research 1. (.5:1:0)

DESCRIPTION: Survey of BYU undergraduate physics and astronomy programs, careers in physics and astronomy, and current physics and astronomy research.

NOTE: Take first semester after registered as physics major.

**Course Outcomes**

- Describe the major subfields of physics and the breadth of interdisciplinary research to which physicists contribute.
- Describe examples of current research in physics or astronomy, explaining what questions are being asked by the investigators and why these questions are interesting.
- Describe career opportunities available in physics and astronomy and the specific preparation necessary for these careers.
- Develop a draft of an educational plan for both undergraduate and graduate training.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

PHSCS 222 : Modern Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Quantum physics, atoms, molecules, condensed matter, nuclei, elementary particles, and selected topics in contemporary physics.

**Course Outcomes**

- Demonstrate their understanding of the fundamental postulates and principles of special relativity and quantum mechanics.
- Apply the principles of quantum mechanics to predict the results of measurements in simple systems such as a free particle, simple potential wells, and central potentials.
- Solve problems and answer conceptual questions applying the principles of quantum mechanics and special relativity to topics in modern physics such as atomic physics, molecular physics, the physics of solids, statistical physics, nuclear physics, radioactivity, and particle physics.

PHSCS 240 : Design, Fabrication, and Use of Scientific Apparatus. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 145

DESCRIPTION: Machining, computer interfacing, controls, and vacuum systems.

**Course Outcomes**

- Design, build, and interface experimental apparatus.
- Make involved physical measurements and analyze experimental results.
- Document in a personal lab notebook the procedures, methods, results, and analysis of laboratory exercises.
- Present work in writing and through oral presentations.
- Demonstrate understanding of professional ethics guidelines for research activities and presentation of results.

**Note:** Phscs 191 should be taken the first semester.

5. Complete the following:

**Either**

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 302 : Mathematics for Engineering 1. (4:4:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Math 113.
DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

**Or**

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
RECOMMENDED: Math 290.
DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

6. Complete one course from the following:

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 302
DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

**Course Outcomes**

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 113 and Math 313.
DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

7. Complete an additional twelve hours from the following:

- Complete *up to* 6 hours from the following:

HIST 291 : History of Science. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Graeco-Islamic scientific tradition. Ideas, practice, and social impact from Greek, Islamic, and Medieval European civilizations and science to eve of Scientific Revolution. Examines cross-cultural exchange, transformation of ideas.

**Course Outcomes**

- Understand how science developed out of ancient thought disciplines
- Understand the continuity of Greek-style scientific thinking through Arabic/Islamic and Latin/Christian civilizations
- Grasp the overall development of science as an intellectual and social practice, from pre-Greek times, down through the Scientific “Revolution” and to the modern period.
- To question the reality of a Scientific “Revolution”
- To gain a hand-on understanding of the ancient practices of astronomy/astrology, and understand how they drove much other scientific research
- To master one topic or technology from the pre- Scientific “Revolution” period

PHIL 423 : History and Philosophy of Science. (3:3:0)

PREREQUISITE: Phy S 100 or instructor's consent; Phil 300.

DESCRIPTION: Scientific explanation, concepts, and models. Philosophical assumptions and criteria for theory selection, as exemplified by historical development of basic ideas in science.

**Course Outcomes**

- Know major concepts, theories, figures, texts, and issues in the history and philosophy of Western science from antiquity to the contemporary era.
- Read and critically discuss figures and texts in the philosophy of science.
- Practice philosophical analysis and argumentation orally and in writing; write a complex, nuanced, and well-referenced research paper on the philosophy of science.
- Be able to explain the practice and value of philosophy of science.

PHSCS 137 : Severe and Hazardous Weather. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Phy S 100 or high school/college physics.

DESCRIPTION: Nonmathematical introduction to meteorology. Atmospheric structure and dynamic behavior, focusing on short-term violent weather and longer-term hazards: drought, floods, heat waves, cold waves, and climate change, including human environmental impact.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

PHSCS 167 : Descriptive Acoustics of Music and Speech. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introductory acoustics course, emphasizing physical principles underlying production and perception of music and speech.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Define the basic terminologies of acoustics, identify physical principles involved in common situations and answer conceptual questions related to hearing, speech, audio, listening environments, and musical instruments.
- Apply scientific models to analysis of hearing, speech and musical instruments, etc.
- Solve basic problems related to hearing, speech, audio, listening environments, and musical instruments.
- Write effectively using the terminology of acoustics and logically outline how acoustics is important in a discipline of their choice.

PHSCS 281 : Principles of Solid State Physics. (3:3:1)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physics of solids, including laboratory experience.

NOTE: For students in science, computer science, technology, and engineering.

**Course Outcomes**

- Use the concepts of lattices, unit cells, and the atomic basis to describe the structure of crystals.
- Apply the concept of reciprocal lattices and the first Brillouin zone to arrive at conclusions about wave diffraction, dispersion graphs of lattice waves, and electron energy bands.
- Apply basic principles of quantum mechanics to describe the behavior of electrons in crystalline solids and describe the concepts of density of states, Pauli's exclusion principle, the Dirac distribution function, and band structure.
- Use the ideas of band structure to arrive at conclusions about the electrical properties of materials. Use the ideas of doping to arrive at conclusions about the electrical properties of semiconductors.

PHSCS 310 : Physics By Inquiry: Mechanics. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 105; or PHSCS 121

DESCRIPTION: Exploring principles of mechanics through scripted inquiry resulting in personal discovery of key principles and learning to teach through inquiry methods.

**Course Outcomes**

- Teach and learn physics using constructivist inquiry based modes of instruction.
- Be able to deliver laboratory instruction to students using only meter sticks and stopwatches (low tech data collection) and also using electronic probes (high tech data collection).Use of Video and Computer Data collection techniques.
- Leave class with a suite of about 15 labs that they have completed and written up from the constructivist teacher model that they can use immediately in the 7-12 secondary physics classroom.
- Develop teaching skills in using projects, practicums and lab experimentation that can be transferred to secondary schools when they are teachers.

PHSCS 311 : Physics By Inquiry: Electricity. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106; or PHSCS 220

DESCRIPTION: Exploring principles of electricity through scripted inquiry resulting in personal discovery of key principles and learning to teach through inquiry methods.

**Course Outcomes**

- Teach physics using constructivist inquiry based modes of instruction, scripted inquiry.
- Be able to deliver laboratory instruction to students from the CASTLE Electricity units.
- Develop teaching skills in using projects, practicums and lab experimentation that can be transferred to secondary schools when they are teachers.
- Develop a teaching suite of labs for teaching electricity.Develop the ability to use alternative modes of assessment that take students beyond the multiple choice format of assessment to open ended, "apply the physics you understand" to this problem.

PHSCS 313R : Special Topics in Physics. (.5-3:ARR:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Special topics in physics for undergraduate physics majors.

**Course Outcomes**

- Achieve the learning outcomes of the trial courses assigned this number from time to time.

- Complete *at least* 6 hours from 300-, 400-, or 550-level physics courses, not including 310 or 311 (Phscs 321, 461, and 471 are highly recommended).

8. Complete the Professional Education Component:
   - Complete the following:

CPSE 402 : Educating Students with Disabilities in Secondary Classrooms. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or comparable major course; FBI fingerprint background clearance.

DESCRIPTION: Issues, policies, and methods in teaching secondary students with disabilities in general education classrooms. Lab.

**Course Outcomes**

- Demonstrate sensitivity to individuals with disabilities.
- Describe the effects of cultural, ethnic, and language diversity on the education of individuals with disabilities
- Describe the steps in the Individual Education Program (IEP) process, including Individualized Transition Plans for students aged 14-22.
- Use research-supported methods for academic instruction of individuals with disabilities including explicit instruction, learning strategies, task analysis, and active participation.
- Describe models and strategies of consultation and collaboration including co-planning and co-teaching.
- Define special education and describe the legal structure of services for individuals with disabilities, including the Individuals with Disabilities Education Act (IDEA).
- Develop a personal philosophy of special education which includes an understanding of the implications of Least Restrictive Environment as defined in IDEA.
- Demonstrate knowledge of basic classroom management theories and an understanding of teacher attitudes and behaviors that influence behavior of individuals with exceptional learning needs.
- Describe the characteristics and educational implications of students with high and low incidence disabilities
- Demonstrate ability to identify and prioritize areas of the general curriculum and provide accommodations for individuals with exceptional learning needs

IP&T 286 : Instructional Technology in Teaching. (1:1:ARR)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Using instructional design, visual design, and differentiated staffing principles along with multimedia authoring systems, telecommunication, and other computer-based tools in the

development of educational applications for secondary education settings.

**Course Outcomes**

There are no course outcomes available

PHY S 276 : Exploration of Teaching. (4:4:0)

PREREQUISITE: FBI fingerprint and background clearance.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching secondary students.

**Course Outcomes**

- Students will become familiar with the four moral dimensions of education as outlined by the McKay School of Education
- Engage in the exploration of teachers and students in the public school to come to a conclusion if teaching physical science is a career path you want to pursue.
- Complete PIBS, CDS, Field Experience Demographic forms in Mackay School date collection program.

PHY S 377 : Teaching Methods and Instruction. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHY S 276

DESCRIPTION: Developing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Using Science Standards as a quide develop Assessments, Lesson Plans, Outlines, and all parts of a unit of science instruction.
- Inquiry, Constructivism, Lab, Activities, Projects and other methods to engage students in learning. These teaching methods will be modeled and practiced by the students.
- Students will complete Transition 2 level toward teaching license.

PHY S 378 : Practicum in Secondary Education. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Concurrent enrollment in Phy S 377.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- 30 practicum hours where you teach a unit of instruction with guidance public school mentor.

SC ED 353 : Multicultural Education. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Designing and adapting instruction for diverse learners; collaborating with families, cultures, and communities in promoting and sustaining learning.

**Course Outcomes**

- Students will examine and understand the various dimensions of cultural identity, including one's own, and apply this knowledge to their thinking and behavio through a process of reflection.
- Acknowledge the dynamics of culture and diversity in school success and teachers' teaching. This includes recognizing and overcoming deficit thinking.
- Identify culturally and linguistically relevant pedagogy and use theoretically grounded principles to analyze why it is effective for many different types of learners.
- Interpret the historical context of diversity, discrimination, and language policies and evaluate how they impact current school practices.
- Recognize and acknowledge racism, discrimination and other forms of inquity and privilege in themselves, in others, and within institutions.
- Recognize and use a personal moral spiritual framework along with principles and concepts of social science to guide educational accomplishments for diverse learners.

SC ED 375 : Adolescent Development and Classroom Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B; or concurrent enrollment.

DESCRIPTION: Analysis of education practice and the relationship between theories and research on development, classroom management, education and the practice of teaching. Focus on adolescent development and an introduction to classroom management.

**Course Outcomes**

There are no course outcomes available

**Note:** FBI fingerprint and background clearance must be completed prior to enrollment in Phy S 276.

- Complete 12 hours of one of the following:

SC ED 476R : Secondary Student-Teaching. (1-12:ARR:ARR)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.

DESCRIPTION: Capstone, field-based, semester-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

- Students will put into practice the theories they have learned in content and pedagogy courses including planning lessons, assessing students of all abilities and cultural backgrounds, using a variety of instructional strategies, and collaborating with other teachers and with the community.

: Secondary Student Teaching - Art.

**Course Outcomes**

: Secondary Student Teaching - Foreign Language. (12:ARR:ARR)

**Course Outcomes**

: Secondary Student Teaching - French.

**Course Outcomes**

: Secondary Student Teaching - Mathematics.

**Course Outcomes**

: Secondary Student Teaching - Physical Science.

**Course Outcomes**

: Secondary Student Teaching - Social Science.

**Course Outcomes**

: Secondary Student Teaching - Spanish.

**Course Outcomes**

SC ED 496R : Academic Internship: Secondary Education. (12:ARR:ARR)

WHEN TAUGHT: Fall

PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.

DESCRIPTION: Capstone, field-based, year-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

**Course Outcomes**

- Students will demonstrate that they can teach, manage, and assess content area knowledge and skills in the 7-12 classroom.
- Foster relationships with school colleagues, parents, and the larger community.

: Academic Internship: Social Sciences.

**Course Outcomes**

: Academic Internship: English.

**Course Outcomes**

: Academic Internship: Mathematics.

**Course Outcomes**

: Academic Internship: Biological Sciences.

**Course Outcomes**

: Academic Internship: Physical Sciences.

**Course Outcomes**

*Hours include courses that may fulfill university core requirements.

# Minor in Astronomy (23 hours*)

Show All Course Descriptions
Hide All Course Descriptions

## Program Requirements

1. No D credit may count toward this minor.
2. Complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Calculus or concurrent enrollment.
DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 127 : Descriptive Astronomy. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

PHSCS 227 : Solar System Astronomy. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 121; Math 112 or equivalent; Phscs 127 or concurrent.

DESCRIPTION: Solar-system dynamics, planetary surfaces and atmospheres. Analysis of stellar data from telescopes, spectrometers and photometers. Interaction of light with atoms and molecules. Extrasolar planets.

**Course Outcomes**

- Solve elementary problems in classical celestial mechanics and in the interaction of light with atoms and molecules.
- Describe the differences between the planets and moons and how these differences provide clues as to their formation history.
- Use observational data of binary stars to determine fundamental stellar parameters, and apply understanding to characterize other stars.
- Describe various telescopes and how they are used with detectors for photometry and spectroscopy.

PHSCS 228 : Stellar and Extragalactic Astronomy. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 227

DESCRIPTION: Stellar atmospheres, stellar interiors, stellar evolution, interstellar matter, galactic structure, external galaxies, and cosmology.

**Course Outcomes**

- Display a qualitative and simple quantitative understanding of the role of the interstellar medium in star formation, stellar structure and evolution;
- Demonstrate an understanding of stellar populations and galactic structure;
- Display a knowledge of the basic properties of galaxies;
- Display a qualitative grasp of up-to-date observational cosmology and solve elementary problems in theoretical cosmology.

PHSCS 329 : Observational Astronomy. (3:2:4)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 127

DESCRIPTION: Basic techniques of observational astronomy, emphasizing practical experience in optical data acquisition and analysis.

NOTE: See instructor about proficiency exam if you have taken Phscs 127 equivalent.

**Course Outcomes**

- Obtain publication quality astronomical data (photometric data) using a telescope and CCD camera.
- Process raw data and extract astrophysically significant information from data about astronomical objects.
- Interpret data obtained and present results in astronomical publication format written in AASTeX.
- Prepare a request for external telescope time.
- Follow professional ethics guidelines in research activities and presentation of results.

*Hours include courses that may fulfill university core requirements.

## Program Requirements

1. No D credit may count toward this minor.
2. Complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Calculus or concurrent enrollment.
DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 140 : Electronics Lab. (1:1:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Introduction to analog and digital circuits.

**Course Outcomes**

- Build and debug basic analog circuits that are of practical use in experimental physics such as voltage dividers, diode rectifiers, inverting and non-inverting op amp circuits, and transistor switches.
- Demonstrate understanding of electrical concepts of voltage, current, resistance, power, and input and output resistance through the analysis of simple circuits.
- Demonstrate proper use and limitations of electrical sources and test equipment including DC power supplies, multimeters, oscilloscopes, and function generators.
- Build and debug basic digital circuits that use components such as digital gates, flipflops, counters, and digital to analog converters.

PHSCS 145 : Experimental Methods in Physics. (1:0:3)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: PHSCS 140; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physical measurement and analysis, optics, sensors, actuators, and computer-based data acquisition.

**Course Outcomes**

- Demonstrate good practices in experimental physics documentation and communication such as data collection, record keeping, and presentation.
- Demonstrate the ability to analyze experimental data this includes techniques such as error estimation, error propagation, model selection, and curve fitting.
- Use simple optical devices (e.g. lenses, mirrors, slits and gratings, polarizers) to explore the geometric and wave properties of light.
- Apply AC concepts such as frequency response, frequency filtering, fourier transform analysis, and impedance to sinusoidally-driven electrical, mechanical, optical, and acoustical systems.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

PHSCS 222 : Modern Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Quantum physics, atoms, molecules, condensed matter, nuclei, elementary particles, and selected topics in contemporary physics.

**Course Outcomes**

- Demonstrate their understanding of the fundamental postulates and principles of special relativity and quantum mechanics.
- Apply the principles of quantum mechanics to predict the results of measurements in simple systems such as a free particle, simple potential wells, and central potentials.
- Solve problems and answer conceptual questions applying the principles of quantum mechanics and special relativity to topics in modern physics such as atomic physics, molecular physics, the physics of solids, statistical physics, nuclear physics, radioactivity, and particle physics.

PHSCS 240 : Design, Fabrication, and Use of Scientific Apparatus. (2:0:6)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: PHSCS 123 & PHSCS 145
DESCRIPTION: Machining, computer interfacing, controls, and vacuum systems.

**Course Outcomes**

- Design, build, and interface experimental apparatus.
- Make involved physical measurements and analyze experimental results.
- Document in a personal lab notebook the procedures, methods, results, and analysis of laboratory exercises.
- Present work in writing and through oral presentations.
- Demonstrate understanding of professional ethics guidelines for research activities and presentation of results.

*Hours include courses that may fulfill university core requirements.

*This minor is designed to prepare students to teach in public schools. A teaching minor may only be received by students graduating with a teaching major. In order to graduate with this minor, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 350 MCKB, (801) 422-3426.*

## Program Requirements

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Calculus or concurrent enrollment.
DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.

- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 140 : Electronics Lab. (1:1:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Introduction to analog and digital circuits.

**Course Outcomes**

- Build and debug basic analog circuits that are of practical use in experimental physics such as voltage dividers, diode rectifiers, inverting and non-inverting op amp circuits, and transistor switches.
- Demonstrate understanding of electrical concepts of voltage, current, resistance, power, and input and output resistance through the analysis of simple circuits.
- Demonstrate proper use and limitations of electrical sources and test equipment including DC power supplies, multimeters, oscilloscopes, and function generators.
- Build and debug basic digital circuits that use components such as digital gates, flipflops, counters, and digital to analog converters.

PHSCS 145 : Experimental Methods in Physics. (1:0:3)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: PHSCS 140; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physical measurement and analysis, optics, sensors, actuators, and computer-based data acquisition.

**Course Outcomes**

- Demonstrate good practices in experimental physics documentation and communication such as data collection, record keeping, and presentation.
- Demonstrate the ability to analyze experimental data this includes techniques such as error estimation, error propagation, model selection, and curve fitting.
- Use simple optical devices (e.g. lenses, mirrors, slits and gratings, polarizers) to explore the geometric and wave properties of light.
- Apply AC concepts such as frequency response, frequency filtering, fourier transform analysis, and impedance to sinusoidally-driven electrical, mechanical, optical, and acoustical systems.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

PHSCS 222 : Modern Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Quantum physics, atoms, molecules, condensed matter, nuclei, elementary particles, and selected topics in contemporary physics.

**Course Outcomes**

- Demonstrate their understanding of the fundamental postulates and principles of special relativity and quantum mechanics.

- Apply the principles of quantum mechanics to predict the results of measurements in simple systems such as a free particle, simple potential wells, and central potentials.
- Solve problems and answer conceptual questions applying the principles of quantum mechanics and special relativity to topics in modern physics such as atomic physics, molecular physics, the physics of solids, statistical physics, nuclear physics, radioactivity, and particle physics.

PHSCS 240 : Design, Fabrication, and Use of Scientific Apparatus. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 145

DESCRIPTION: Machining, computer interfacing, controls, and vacuum systems.

**Course Outcomes**

- Design, build, and interface experimental apparatus.
- Make involved physical measurements and analyze experimental results.
- Document in a personal lab notebook the procedures, methods, results, and analysis of laboratory exercises.
- Present work in writing and through oral presentations.
- Demonstrate understanding of professional ethics guidelines for research activities and presentation of results.

3. Complete one course from the following:

PHSCS 310 : Physics By Inquiry: Mechanics. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 105; or PHSCS 121

DESCRIPTION: Exploring principles of mechanics through scripted inquiry resulting in personal discovery of key principles and learning to teach through inquiry methods.

**Course Outcomes**

- Teach and learn physics using constructivist inquiry based modes of instruction.
- Be able to deliver laboratory instruction to students using only meter sticks and stopwatches (low tech data collection) and also using electronic probes (high tech data collection).Use of Video and Computer Data collection techniques.
- Leave class with a suite of about 15 labs that they have completed and written up from the constructivist teacher model that they can use immediately in the 7-12 secondary physics classroom.
- Develop teaching skills in using projects, practicums and lab experimentation that can be transferred to secondary schools when they are teachers.

PHY S 377 : Teaching Methods and Instruction. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHY S 276

DESCRIPTION: Developing meaningful and engaging instruction for secondary students; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

**Course Outcomes**

- Using Science Standards as a quide develop Assessments, Lesson Plans, Outlines, and all parts of a unit of science instruction.
- Inquiry, Constructivism, Lab, Activities, Projects and other methods to engage students in learning. These teaching methods will be modeled and practiced by the students.
- Students will complete Transition 2 level toward teaching license.

*Hours include courses that may fulfill university core requirements.

## Undergraduate Courses

### 100-Level Courses

PHSCS 101 : Basic Physics. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Principles of classical and modern physics. Concepts and simple calculations applied to the world around us.

**Course Outcomes**

- Use basic physical laws and concepts to analyze everyday phenomena and do simple calculations involving those laws. These laws and concepts include Newton's laws of motion, conservation laws, simple thermodynamics, fluids, and electricity and magnetism.
- Qualitatively discuss and do simple calculations involving modern physics concepts that are not everyday but which have important practical and philosophical implications in today's world, such as quantum mechanics, nuclear physics and relativity.

PHSCS 105 : General Physics 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

**Course Outcomes**

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

**Course Outcomes**

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

**Course Outcomes**

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

**Course Outcomes**

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

**Course Outcomes**

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

**Course Outcomes**

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 127 : Descriptive Astronomy. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

PHSCS 137 : Severe and Hazardous Weather. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Phy S 100 or high school/college physics.

DESCRIPTION: Nonmathematical introduction to meteorology. Atmospheric structure and dynamic behavior, focusing on short-term violent weather and longer-term hazards: drought, floods, heat waves, cold waves, and climate change, including human environmental impact.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

PHSCS 140 : Electronics Lab. (1:1:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Introduction to analog and digital circuits.

**Course Outcomes**

- Build and debug basic analog circuits that are of practical use in experimental physics such as voltage dividers, diode rectifiers, inverting and non-inverting op amp circuits, and transistor switches.
- Demonstrate understanding of electrical concepts of voltage, current, resistance, power, and input and output resistance through the analysis of simple circuits.
- Demonstrate proper use and limitations of electrical sources and test equipment including DC power supplies, multimeters, oscilloscopes, and function generators.
- Build and debug basic digital circuits that use components such as digital gates, flipflops, counters, and digital to analog converters.

PHSCS 145 : Experimental Methods in Physics. (1:0:3)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: PHSCS 140; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physical measurement and analysis, optics, sensors, actuators, and computer-based data acquisition.

**Course Outcomes**

- Demonstrate good practices in experimental physics documentation and communication such as data collection, record keeping, and presentation.
- Demonstrate the ability to analyze experimental data this includes techniques such as error estimation, error propagation, model selection, and curve fitting.
- Use simple optical devices (e.g. lenses, mirrors, slits and gratings, polarizers) to explore the geometric and wave properties of light.
- Apply AC concepts such as frequency response, frequency filtering, fourier transform analysis, and impedance to sinusoidally-driven electrical, mechanical, optical, and acoustical systems.

PHSCS 167 : Descriptive Acoustics of Music and Speech. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introductory acoustics course, emphasizing physical principles underlying production and perception of music and speech.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Define the basic terminologies of acoustics, identify physical principles involved in common situations and answer conceptual questions related to hearing, speech, audio, listening environments, and musical instruments.
- Apply scientific models to analysis of hearing, speech and musical instruments, etc.
- Solve basic problems related to hearing, speech, audio, listening environments, and musical instruments.
- Write effectively using the terminology of acoustics and logically outline how acoustics is important in a discipline of their choice.

PHSCS 191 : Introduction to Physics Careers and Research 1. (.5:1:0)

DESCRIPTION: Survey of BYU undergraduate physics and astronomy programs, careers in physics and astronomy, and current physics and astronomy research.

NOTE: Take first semester after registered as physics major.

**Course Outcomes**

- Describe the major subfields of physics and the breadth of interdisciplinary research to which physicists contribute.
- Describe examples of current research in physics or astronomy, explaining what questions are being asked by the investigators and why these questions are interesting.
- Describe career opportunities available in physics and astronomy and the specific preparation necessary for these careers.
- Develop a draft of an educational plan for both undergraduate and graduate training.

PHSCS 198 : Physics and Mathematics Review. (1:2:0)

PREREQUISITE: Phscs 121 or equivalent. Math 113 or concurrent enrollment.

DESCRIPTION: Review of mathematics and introductory physics for returning missionaries and others returning after a significant break.

**Course Outcomes**

- Recall and apply the fundamental mathematical concepts and techniques up to the level of differential and beginning integral calculus that are necessary for Physics 121.
- Recall and apply fundamental physics concepts at the level of Physics 121.

### 200-Level Courses

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

**Course Outcomes**

There are no course outcomes available

PHSCS 222 : Modern Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Quantum physics, atoms, molecules, condensed matter, nuclei, elementary particles, and selected topics in contemporary physics.

**Course Outcomes**

- Demonstrate their understanding of the fundamental postulates and principles of special relativity and quantum mechanics.
- Apply the principles of quantum mechanics to predict the results of measurements in simple systems such as a free particle, simple potential wells, and central potentials.
- Solve problems and answer conceptual questions applying the principles of quantum mechanics and special relativity to topics in modern physics such as atomic physics, molecular physics, the physics of solids, statistical physics, nuclear physics, radioactivity, and particle physics.

PHSCS 227 : Solar System Astronomy. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 121; Math 112 or equivalent; Phscs 127 or concurrent.

DESCRIPTION: Solar-system dynamics, planetary surfaces and atmospheres. Analysis of stellar data from telescopes, spectrometers and photometers. Interaction of light with atoms and molecules. Extrasolar planets.

**Course Outcomes**

- Solve elementary problems in classical celestial mechanics and in the interaction of light with atoms and molecules.
- Describe the differences between the planets and moons and how these differences provide clues as to their formation history.
- Use observational data of binary stars to determine fundamental stellar parameters, and apply understanding to characterize other stars.
- Describe various telescopes and how they are used with detectors for photometry and spectroscopy.

PHSCS 228 : Stellar and Extragalactic Astronomy. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 227

DESCRIPTION: Stellar atmospheres, stellar interiors, stellar evolution, interstellar matter, galactic structure, external galaxies, and cosmology.

**Course Outcomes**

- Display a qualitative and simple quantitative understanding of the role of the interstellar medium in star formation, stellar structure and evolution;
- Demonstrate an understanding of stellar populations and galactic structure;
- Display a knowledge of the basic properties of galaxies;
- Display a qualitative grasp of up-to-date observational cosmology and solve elementary problems in theoretical cosmology.

PHSCS 230 : Computational Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 113

DESCRIPTION: Introduction to numerical and symbolic computation and graphical analysis using a symbolic mathematics program. Applications to mechanics, optics, and special relativity.

**Course Outcomes**

- Demonstrate the ability to apply calculus, linear algebra, and complex analysis to solve undergraduate-level physics problems.
- Demonstrate the ability to use programming constructs such as looping, conditional execution, and iteration to solve physics problems.
- Solve equations, including systems of equation, related to physical phenomena both symbolically and numerically.
- Demonstrate the ability to visualize, analyze, and interpret equations, data, and physical models.

PHSCS 240 : Design, Fabrication, and Use of Scientific Apparatus. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 145

DESCRIPTION: Machining, computer interfacing, controls, and vacuum systems.

**Course Outcomes**

- Design, build, and interface experimental apparatus.
- Make involved physical measurements and analyze experimental results.
- Document in a personal lab notebook the procedures, methods, results, and analysis of laboratory exercises.
- Present work in writing and through oral presentations.
- Demonstrate understanding of professional ethics guidelines for research activities and presentation of results.

PHSCS 245 : Experiments in Contemporary Physics. (2:0:6)

WHEN TAUGHT: Fall; Winter; Spring Odd Yrs.

PREREQUISITE: PHSCS 220 & PHSCS 240

DESCRIPTION: In-depth, multi-period experiments in contemporary physics, using advanced instrumentation.

**Course Outcomes**

- Demonstrate the use and assembly of experimental systems using contemporary instrumentation components to perform experiments in areas such as coherent optical systems, microfabrication, and vacuum systems.
- Independently design and carry out multi-period in-depth projects.
- Present research results through oral presentations.

PHSCS 281 : Principles of Solid State Physics. (3:3:1)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 220; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physics of solids, including laboratory experience.

NOTE: For students in science, computer science, technology, and engineering.

**Course Outcomes**

- Use the concepts of lattices, unit cells, and the atomic basis to describe the structure of crystals.

- Apply the concept of reciprocal lattices and the first Brillouin zone to arrive at conclusions about wave diffraction, dispersion graphs of lattice waves, and electron energy bands.
- Apply basic principles of quantum mechanics to describe the behavior of electrons in crystalline solids and describe the concepts of density of states, Pauli's exclusion principle, the Dirac distribution function, and band structure.
- Use the ideas of band structure to arrive at conclusions about the electrical properties of materials. Use the ideas of doping to arrive at conclusions about the electrical properties of semiconductors.

PHSCS 291 : Introduction to Physics Careers and Research 2. (.5:1:0)

PREREQUISITE: PHSCS 123; Phscs 191 or concurrent enrollment.

DESCRIPTION: Career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law, and business. Personal planning for research or internship involvement.

NOTE: Take first semester as a sophomore.

**Course Outcomes**

- Describe career opportunities for physicists in industry, interdisciplinary research, national labs and observatories, and professions such as medicine, law and business.
- Learn how to prepare for and succeed in such careers from physicists working in them.
- Develop a plan for research or internship involvement.
- Develop a plan for graduate school (if the student's career path requires it).

PHSCS 297R : Introduction to Research. (1-3:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring, Contact Department; Summer

DESCRIPTION: Faculty-supervised research experience.

**Course Outcomes**

- Produce an informal written report in acceptable scientific style describing the results of this mentored research experience.

**300-Level Courses**

PHSCS 310 : Physics By Inquiry: Mechanics. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 105; or PHSCS 121

DESCRIPTION: Exploring principles of mechanics through scripted inquiry resulting in personal discovery of key principles and learning to teach through inquiry methods.

**Course Outcomes**

- Teach and learn physics using constructivist inquiry based modes of instruction.
- Be able to deliver laboratory instruction to students using only meter sticks and stopwatches (low tech data collection) and also using electronic probes (high tech data collection).Use of Video and Computer Data collection techniques.
- Leave class with a suite of about 15 labs that they have completed and written up from the constructivist teacher model that they can use immediately in the 7-12 secondary physics classroom.
- Develop teaching skills in using projects, practicums and lab experimentation that can be transferred to secondary schools when they are teachers.

PHSCS 311 : Physics By Inquiry: Electricity. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 106; or PHSCS 220

DESCRIPTION: Exploring principles of electricity through scripted inquiry resulting in personal discovery of key principles and learning to teach through inquiry methods.

**Course Outcomes**

- Teach physics using constructivist inquiry based modes of instruction, scripted inquiry.
- Be able to deliver laboratory instruction to students from the CASTLE Electricity units.
- Develop teaching skills in using projects, practicums and lab experimentation that can be transferred to secondary schools when they are teachers.
- Develop a teaching suite of labs for teaching electricity.Develop the ability to use alternative modes of assessment that take students beyond the multiple choice format of assessment to open ended, "apply the physics you understand" to this problem.

PHSCS 313R : Special Topics in Physics. (.5-3:ARR:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Special topics in physics for undergraduate physics majors.

**Course Outcomes**

- Achieve the learning outcomes of the trial courses assigned this number from time to time.

PHSCS 318 : Introduction to Mathematical Physics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 303 & PHSCS 230; or MATH 334 & PHSCS 230

DESCRIPTION: Partial differential equations, classical field equations, algebra of complex variables, Fourier analysis, integral transforms, and orthogonal functions.

**Course Outcomes**

- Solve partial differential equations in Cartesian, cylindrical, and spherical coordinates using separation of variables and expansions in orthogonal functions. Apply boundary conditions appropriate for physical systems.
- Perform algebraic computations involving complex numbers and functions.
- Use the properties (such as recursion relations, derivative relationships, and orthogonality conditions) of various special functions, including trigonometric functions, Bessel functions, and Legendre polynomials to solve problems involving those functions.
- Use Fourier series and transforms to expand functions and solve partial differential equations on appropriate domains.

PHSCS 321 : Mechanics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 121 & PHSCS 230 & MATH 302; or PHSCS 121 & PHSCS 230 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Concurrent enrollment in Phscs 330.

DESCRIPTION: Newton's laws applied to particles and systems of particles, including rigid bodies. Conservation principles and Lagrange's and Hamilton's equations.

**Course Outcomes**

- Use Newtonian mechanics with forces and torques to solve problems in Cartesian and curvilinear coordinates.
- Solve mechanics problems using work-energy, and conservation of energy, momentum and angular momentum.
- Solve and analyze rigid-body problems and problems in non-inertial frames.
- Use Lagrangian and Hamiltonian mechanics to obtain the equations of motion for a variety of problems, including the use of generalized coordinates and cyclic coordinates.
- Use perturbation and similar techniques to linearize equations of motion to analyze stability and study coupled systems using normal modes.

PHSCS 329 : Observational Astronomy. (3:2:4)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 127

DESCRIPTION: Basic techniques of observational astronomy, emphasizing practical experience in optical data acquisition and analysis.

NOTE: See instructor about proficiency exam if you have taken Phscs 127 equivalent.

**Course Outcomes**

- Obtain publication quality astronomical data (photometric data) using a telescope and CCD camera.
- Process raw data and extract astrophysically significant information from data about astronomical objects.
- Interpret data obtained and present results in astronomical publication format written in AASTeX.
- Prepare a request for external telescope time.
- Follow professional ethics guidelines in research activities and presentation of results.

PHSCS 330 : Computational Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: PHSCS 121 & PHSCS 230; Math 303 or 334 or equivalent; CS 142 or equivalent.

DESCRIPTION: Numerical solution of ordinary differential equations, linear algebra and eigenvalues, chaos theory. Applications to dynamics. Introduction to programming in Matlab.

**Course Outcomes**

- Demonstrate proficiency in using MATLAB and show that the student can write working programs.
- Be able to qualitatively explain how differential equations generate their solution curves.
- Use a symbolic mathematics programs and MATLAB to solve ordinary differential equations to simulate dynamical systems.

PHSCS 360 : Statistical and Thermal Physics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 222 & MATH 303; or PHSCS 222 & MATH 334

DESCRIPTION: Principles of statistical mechanics and thermodynamics, with applications.

**Course Outcomes**

- Use statistical arguments to explain thermodynamics from first principles, including heat flow and the increase of entropy. Apply these to solve quantitative problems in thermodynamics.
- Use thermodynamic potentials, e.g. the Helmholtz and Gibbs free energies, to predict equilibrium states in physical systems and predict phase transformations.
- Use simple models to explain physical phenomena in a variety of systems, including: classical and quantum ideal gases, magnetic systems, solids.

PHSCS 391R : Seminar in Current Physics. (1:1:0)

WHEN TAUGHT: Contact Department.

**Course Outcomes**

There are no course outcomes available

PHSCS 399R : Academic Internship. (.5-9:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Both department chair's and internship coordinator's consent.
NOTE: For students engaged in the internship program.

**Course Outcomes**

- Student will report, both verbally and in writing, what he or she learned from the internship experience.

### 400-Level Courses

PHSCS 416 : Writing in Physics. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: Completed research for thesis or capstone project.
DESCRIPTION: Writing scientific and technical articles and proposals. Writing and presentation skills applied to senior thesis or capstone project. Resources and guidelines for publishing in physics.

**Course Outcomes**

There are no course outcomes available

PHSCS 427 : Introduction to Astrophysics. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: PHSCS 227 & PHSCS 228
DESCRIPTION: Principles and observational techniques of astrophysics.

**Course Outcomes**

- Represent sky positions and kinematics using basic astronomical spatial and time coordinates. Transform coordinates, motions and times between coordinate systems. Explain at least ten reasons why sky positions change, and make corrections for those which are purely apparent.
- Manipulate basic stellar spectral data, represent such data in and interpret the HR-diagram and kindred color-magnitude and color-color diagrams, explaining their relation to theoretical temperature-luminosity diagrams. Explain how these serve as tools in studies of stars and the interstellar medium.
- Explain the stellar luminosity function, describe its determination, explain the difficulties encountered in its determination, and explain why the actual stellar content of the galaxy is so different from the counting samples we obtain, either with the naked eye or telescopically.
- Describe the most commonly used types of telescopes (visual and non-visual) and auxiliary instruments (including detectors) and be able to calculate their performance characteristics. Explain the advantages and disadvantages of different types and configurations of instruments. Describe and explain the considerations of observatory site selection.
- Interpret and use in solving simple problems the Planck function, the Maxwellian kinematic distributions, and the Boltzmann, Saha, and molecular-disassociation equations.

PHSCS 428 : Introduction to Astrophysics. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: PHSCS 227 & PHSCS 228
DESCRIPTION: Principles and observational techniques of astrophysics.

**Course Outcomes**

- Explain and apply the basic laws and conventions of atomic spectroscopy.
- Explain and apply fundamental radiation laws for both continuum and discrete line processes. Relate line emission and absorption coefficients to the Einstein coefficients. Be familiar with the equation of transfer and solve it for the interstellar medium and an Eddington model atmosphere. Explain stellar limb darkening.
- Describe the physical mechanisms that broaden and shape line absorption coefficients and show how to convolve various combinations of coefficient profiles. Then explain the changes that occur in a line profile as causative conditions change. Explain why an actual line profile is proportional in shape to its absorption coefficient profile in weak but not in strong lines.
- Use curve-of-growth analysis to determine stellar composition.
- Explain and quantify the degradation of stellar spectra by terrestrial atmospheric absorption, scattering and refraction.

PHSCS 430 : Computational Physics Lab 3. (1:0:3)

WHEN TAUGHT: Winter; Summer
PREREQUISITE: PHSCS 222 & PHSCS 318 & PHSCS 330
DESCRIPTION: Static and dynamic boundary value problems, partial differential equations. Applications in electrostatics, thermodynamics, waves, and quantum mechanics. Programming with Matlab.

**Course Outcomes**

- Numerically solve physics problems involving partial differential equations using Mathematica and MATLAB.
- Apply the basic programming concepts of looping and conditional branching to numerical problems.

PHSCS 441 : Electrostatics and Magnetism. (3:3:0)

WHEN TAUGHT: Fall; Spring
PREREQUISITE: PHSCS 220 & PHSCS 318
DESCRIPTION: Classical theory of static electric and magnetic fields.

**Course Outcomes**

- Demonstrate the ability to apply the concepts of vector calculus as used in Maxwell's equations.

- Demonstrate the ability to integrate over a source distribution to calculate time-independent fields and potentials for both electricity and magnetism. Also demonstrate the ability to use Gauss's law and Amperes law to find electric and magnetic fields in symmetric situations.
- Demonstrate the ability to use vacuum harmonics, image charges, and image currents to solve for time-independent electric and magnetic potentials and fields.
- Demonstrate the ability to calculate electric and magnetic fields in the presence of matter which can be electrically and magnetically polarized, including the ability to solve problems involving torques and potential energies of electric and magnetic dipoles.

PHSCS 442 : Electrodynamics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 441

DESCRIPTION: Maxwell's equations, radiation, interaction of electromagnetic fields with matter, and special relativity.

**Course Outcomes**

- Demonstrate the ability to calculate time-dependent electric fields using Faraday's law and the ability to calculate time-dependent magnetic fields using Maxwell's displacement current.
- Demonstrate the ability to solve problems involving electric and magnetic energy densities and the Maxwell stress tensor.
- Demonstrate the ability to use Maxwell's equations to solve problems involving electromagnetic waves in vacuum and in matter.
- Demonstrate the ability to use the concept of retarded time to compute radiation potentials.
- Demonstrate the ability to solve problems involving the special theory of relativity, including 4-vectors, form invariance, and the electromagnetic field tensor.

PHSCS 451 : Quantum Mechanics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 222 & PHSCS 318

DESCRIPTION: Analytical foundations of quantum mechanics.

**Course Outcomes**

- Understand the mechanics of operators, eigenstates and eigenvalues. Learn how to build wave functions, estimate expectation values and standard deviations, and apply the Heisenberg uncertainty principle.
- Manipulate the Schrödinger equation to solve for wave functions.
- Develop free-particle and bound-state solutions to the Schrödinger equation. (In particular, harmonic oscillator, infinite and finite square-well, finite barrier potentials…).
- Construct simple solutions for Hydrogen atom, angular momentum and spin systems, atoms and solids.

PHSCS 452 : Applications of Quantum Mechanics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 451

DESCRIPTION: Applications of quantum mechanics to atomic, molecular, statistical, condensed-matter, and nuclear physics; elementary particles.

**Course Outcomes**

- Apply techniques such as time-independent perturbation theory, variational methods, time-dependent perturbation theory, and scattering theory to quantum systems.
- Describe and quantify fine, hyperfine, and Zeeman level splittings in atoms.
- Characterize emission and absorption of radiation by atoms, and derive the associated selection rules.
- Solve quantum scattering and tunneling problems.

PHSCS 461 : Introduction to Acoustics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 121 & PHSCS 123 & MATH 303; or PHSCS 121 & PHSCS 123 & MATH 334

RECOMMENDED: Concurrent enrollment in Phscs 318 or equivalent.

DESCRIPTION: Mathematical descriptions of physical phenomena in generation, propagation, and reception of acoustic waves. Fundamental acoustical instrumentation and analysis techniques. Application of physical principles and mathematical models to realistic problems.

**Course Outcomes**

- Demonstrate a conceptual and mathematical understanding of acoustical phenomena, including source radiation, transmission, absorption, and reflection.
- Perform acoustical measurements, interpret the data, and document the results in the form of technical laboratory reports.
- Appropriately calculate various measures of sound, including sound pressure level, transmission loss, sound power, weighted levels, and noise criteria.

PHSCS 471 : Principles of Optics. (3:3:1)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: PHSCS 121 & PHSCS 220 & MATH 302; or PHSCS 121 & PHSCS 220 & MATH 314; Math 303 or 334 or concurrent enrollment.

RECOMMENDED: Phscs 318.

DESCRIPTION: Electromagnetic wave phenomena, including polarization effects, interference, coherence, dispersion, ray theory, diffraction; introduction to quantum nature of light. Laboratory component emphasizes applications.

**Course Outcomes**

- Use mathematical and conceptual descriptions of propagation of light in matter, reflection/transmission at boundaries, polarization effects, interference, dispersion, coherence, image formation, diffraction, and quantum

aspects of light to analyze and predict optical phenomena.
- Manipulate and measure properties of light in a laboratory setting.
- Apply mathematical tools such as vector calculus, complex numbers, matrices, and Fourier transforms (1D and 2D) to optical problems.

PHSCS 492R : Capstone Project in Applied Physics. (2:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Conducting and reporting original research or appropriate creative work. Mentored career experience combining physics and the chosen area of interest. Project must be approved by the department capstone project coordinator or the associate chair before registration or starting project.

**Course Outcomes**

- Students will produce, in both verbal and written form, a report of what was accomplished in his or her capstone project.

PHSCS 497R : Research in Physics. (1-3:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Produce a written report in acceptable scientific style describing the results of this mentored research experience.

PHSCS 498R : Senior Thesis. (.5-3:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Conducting and reporting research under a department faculty mentor or other professionals.

NOTE: Thesis topic must be cleared by faculty member before registration.

**Course Outcomes**

- Perform significant research in physics or astronomy under the direction of a faculty or internship mentor.
- Present their research in a written document that follows professional standards in the field.
- Do the above within professional ethical standards.

## 500-Level Graduate Courses (available to advanced undergraduates)

PHSCS 500 : (Phscs-Chem-C S-Geol-Math-MthEd-Stat) Business Career Essentials in Science and Math. (1.5:1.5:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills necessary to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.
- Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

PHSCS 513R : Special Topics in Contemporary Physics. (.5-3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Topics generally related to recent developments in physics.

**Course Outcomes**

- Demonstrate the ability to achieve the learning outcomes of this trial course whose subject is variable.

PHSCS 529 : Advanced Observational Astronomy. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PHSCS 427 & PHSCS 428

DESCRIPTION: Advanced techniques of observational astronomy, emphasizing knowledge and skills necessary to carry out observational scientific investigation in astronomy.

**Course Outcomes**

- Program an observing schedule into a remote/robotic telescope system to acquire high quality data.
- Reduce all-sky photometric astronomical data in multiple filters.
- Process and analyze infrared astronomical data sets.
- Obtain, process, and analyze radio data on astronomical objects.
- Reduce raw astronomical spectroscopic data to 1D wavelength calibrated stectra and calculate astrophysically important data from those spectra.
- Describe observing programs that require multi-wavelength observing programs.

PHSCS 540 : Electrical Engineering Principles and Practices for Physicists. (2:0:6)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Phscs 140, 145, 220; Math 303 or 334; ability to program in Matlab.

DESCRIPTION: Electronic instrumentation theory and methods. Computer aided circuit design and analysis with transforms, logic and computer simulation. Analog, digital, and discrete signal systems. Printed circuit design and system-on-a-chip creation.

**Course Outcomes**

There are no course outcomes available

PHSCS 545 : Introduction to Plasma Physics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PHSCS 321 & PHSCS 441

DESCRIPTION: Introduction to plasma physics, including single-particle motion and both fluid and kinetic models of plasma behavior.

**Course Outcomes**

- Solve problems and answer conceptual questions involving both the single-particle and the fluid descriptions of a plasma.
- Describe and characterize the various waves found in a plasma.
- Determine the equilibrium and evaluate the stability of simple plasma configurations.
- Solve problems and answer conceptual questions involving the kinetic theory of plasmas and nonlinear effects.

PHSCS 561 : (Phscs-Me En) Fundamentals of Acoustics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Phscs 318 or equivalent; Phscs 461 or concurrent enrollment.

RECOMMENDED: Phscs 318, 321; or equivalents.

DESCRIPTION: Vibrating systems, elastic media, mechanical energy, and radiation. Sound generation, transmission, reflection, and reception.

**Course Outcomes**

- Conceptualize and solve problems in fundamental areas of vibroacoustics, including: strings, rods, membranes, beams, plates, plane and spherical waves, reflection and transmission phenomena, and radiation of sources.
- Acquire and analyze acoustical data for physical understanding, and document the results in the form of technical laboratory reports.

PHSCS 571 : Lasers and Atoms. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Phscs 451, 471; or equivalents.

DESCRIPTION: Laser amplification, cavity design, and control and characterization of temporal and spatial modes. Interactions between lasers and atoms.

**Course Outcomes**

- Design stable laser resonators, frequency-locking feedback systems, and pulsed-output mode-locking systems.
- Measure durations of femtosecond pulses and the line width and center frequency of frequency-stabilized sources.
- Compute cavity threshold gain, optimal output coupling, and gain saturation.
- Describe interactions of light and matter within a semi-classical two-level-atom framework.
- Compute cross sections and selection rules for transitions in hydrogen.

PHSCS 581 : Solid-State Physics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Phscs 222 or equivalent.

DESCRIPTION: Introduction to the physics of solids. Crystal structure and symmetry, X-ray diffraction, lattice vibrations, metals and semiconductors, superconductivity, thermal properties, magnetic properties, and dielectric and optical properties.

**Course Outcomes**

- Explain the following basic concepts underlying the topics in solid state physics: (1) crystal symmetry, (2) reciprocal lattice and the first Brillouin zone in k-space, and (3) the quantum behavior of electrons, Pauli's exclusion principle, and the Fermi-Dirac distribution function.
- Use these basic concepts to explain crystal structure, x-ray diffraction, lattice vibrations, behavior of electrons in metals and semiconductors, and thermal, magnetic, dielectric and optical properties of materials.
- Show their understanding of these topics and their underlying concepts by solving problems using a variety of mathematical tools.

PHSCS 583 : Physics of Nanostructures, Surfaces, and Interfaces. (3:3.0:0.0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Phscs 222 or equivalent.

RECOMMENDED: Phscs 281 or 581 or equivalent; Phscs 451 or Chem 462 or equivalent.

DESCRIPTION: Properties of nanostructures, surfaces, and interfaces; experimental methods. Applications to emerging problems and opportunities in science and technology. Emphasis on concepts.

**Course Outcomes**

No outcomes are available at this time.

PHSCS 585 : Thin-Film Physics. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Phscs 222 or equivalent.

DESCRIPTION: Preparation, characterization, use, and special properties of modern thin films; interdisciplinary treatment. Of interest to students in applied physics and engineering.

**Course Outcomes**

- Solve problems and answer conceptual questions, utilizing the graphs, figures and photographs of thin film material science, about structural and chemical aspects of thin films in relation to their environment.
- Solve problems and answer conceptual questions involving deposition and characterization of films, and explain which ones that best match resources and requirements.

PHSCS 586 : Transmission Electron Microscopy for Physical Science and Engineering. (3:3:2)

WHEN TAUGHT: Fall

DESCRIPTION: Practical and theoretical aspects of sample preparation, basic and advanced imaging, electron diffraction, and other analytical materials characterization techniques on the transmission electron microscope.

**Course Outcomes**

- Use the TEM to acquire different types of images and diffraction patterns of various materials.
- Perform basic, necessary alignments of the transmission electron microscope (TEM).
- Demonstrate a working knowledge of the physical components of the TEM and peripheral equipment.
- Show understanding of the theory and practice of electron imaging, electron diffraction and X-ray energy dispersive spectrometry, as how they apply to the characterization of materials.

PHSCS 587 : Physics of Semiconductor Devices. (3:3.0:0.0)

WHEN TAUGHT: Fall Contact Department

PREREQUISITE: PHSCS 281; or PHSCS 581; or EC EN 450

DESCRIPTION: Device physics, with an in-depth study of the MOS transistor and other nanoscale computing devices.

**Course Outcomes**

- Identify the fundamental mechanisms and models of these mechanisms controlling the operation of semiconductor devices.
- Apply the fundamental mechanisms and models to the analysis of devices such as silicon mosfets, silicon on insulator transistors, carbon nanotube transistors, and graphene transistors.
- Find, read, and utilize contemporary semiconductor device physics literature to write reviews of this literature.

PHSCS 599R : Academic Internship. (.5-9:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Department internship coordinator's consent.

DESCRIPTION: Cooperative education internships off campus.

**Course Outcomes**

- Student will report, both verbally and in writing, what he or she learned from the internship experience.

## Graduate Courses

For 600- and 700-level courses, see the BYU 2014–2015 Graduate Catalog.

## Professors

Allred, David D.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1971
MS, Princeton University, 1973
PhD, Princeton University, 1977

Bergeson, Scott D.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1990
PhD, University of Wisconsin, Madison, 1995

Berrondo, Manuel
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, University of Mexico, 1966
PhD, University of Uppsala, Sweden, 1969

Davis, Robert Clinton
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1989
PhD, University of Utah, 1996

Hart, Gus L. W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1994
MS, University of California, Davis, 1997
PhD, University of California, Davis, 1999

Migenes, Victor
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** PhD, University of Pennsylvania, Philadelphia, 1989

Moody, Joseph Ward
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1980
MS, University of Michigan, Ann Arbor, 1984
PhD, University of Michigan, Ann Arbor, 1986

Peatross, Justin Bruce
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy

**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1988
MS, University of Rochester, 1990
PhD, University of Rochester, 1993

Rees, Lawrence B.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1976
MS, University of Maryland, College Park, 1979
PhD, University of Maryland, College Park, 1983

Sommerfeldt, Scott D.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BM, Brigham Young University, 1983
MS, Brigham Young University, 1986
PhD, Pennsylvania State University, 1989

Spencer, Ross Loren
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1974
MS, University of Wisconsin, Madison, 1976
PhD, University of Wisconsin, Madison, 1979

Stokes, Harold T.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1971
PhD, University of Utah, 1977

Turley, R. Steven
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1978
PhD, Massachusetts Institute of Technology, 1984

Vanfleet, Richard R.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1992
MS, University of Illinois, 1994
PhD, University of Illinois, 1997

## Associate Professors

Campbell, Branton J.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1993
MA, University of California, Santa Barbara, 1995
PhD, University of California, Santa Barbara, 1999

Christensen, Clark G.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1966
PhD, California Institute of Technology, 1972

Colton, John S.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy

**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1994
MS, University of California, Berkeley, 1997
PhD, University of California, Berkeley, 2000

Durfee, Dallin S.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1994
PhD, Massachusetts Institute of Technology, 1999

Gee, Kent L.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 2001
MS, Brigham Young University, 2002
PhD, Pennsylvania State University, 2005

Hart, Grant W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1977
PhD, University of Maryland, College Park, 1983

Hess, Bret C.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young Iniversity, 1982
PhD, Iowa State University, 1988

Hintz, Eric G.B.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Case Western Reserve University, 1988
BS, Case Western Reserve University, 1988
PhD, Brigham Young University, 1995

Hirschmann, Eric W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1991
PhD, University of California, Santa Barbara, 1996

Leishman, Timothy W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BA, Brigham Young University, 1990
PhD, Pennsylvania State University, 2000

Neilsen, David W.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1992
MS, Brigham Young University, 1995
PhD, University of Texas, Austin, 1999

Van Huele, Jean-François S.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor
**DEGREES:** BS, Brussels Free University, Belgium, 1979
PhD, Brussels Free University, Belgium, 1987

Ware, Michael J.
**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Professor

**DEGREES:** BS, Brigham Young University, 1999
PhD, Brigham Young University, 2001

## Assistant Professors

Chesnel, Karine

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Assistant Professor
**DEGREES:** MS, Ecole Normale Superieure, 1999
PhD, Joseph Fourier University, France, 2002

Stephens, Denise

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 1996
MS, New Mexico State University, 1999
PhD, New Mexico State University, 2002

Transtrum, Mark K.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2006
MS, Cornell University, 2010
PhD, Cornell University, 2011

## Associate Teaching Professor

Merrell, Duane B.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Teaching Professor
**DEGREES:** AS, College of Eastern Utah, 1980
BS, Utah State University, 1985
MA, Utah State University, 1988

## Research Professor

Joner, Michael Deloss

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Research Professor
**DEGREES:** AA, Clark College, 1975
BS, Brigham Young University, 1979
MS, Brigham Young University, 1981

## Associate Research Professor

Peterson, Bryan G.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Physics and Astronomy
**RANK:** Associate Research Professor
**DEGREES:** BS, Brigham Young University, 1978
PhD, Brigham Young University, 1983

# Statistics

H. Dennis Tolley, Chair
223 TMCB, (801) 422-4505

College of Physical and Mathematical Sciences Advisement Center
N-181 ESC, (801) 422-2674

## Admission to Degree Program

All degree programs in the Department of Statistics are open enrollment.

## The Discipline

Statisticians help determine the sampling and data collection methods, monitor the execution of the study and the processing of data, and advise on the strengths and limitations of the results. They must understand the nature of uncertainties and be able to draw conclusions in the context of particular statistical applications.

An actuary is a business professional who analyzes the financial consequences of risk. Actuaries use statistics, mathematics, and financial theory to study uncertain future events, especially those of concern to insurance and pension programs. They evaluate the likelihood of those events and design creative ways to reduce the likelihood and decrease the impact of adverse events that actually do occur. Their work requires a combination of strong analytical skills, business knowledge, and understanding of human behavior to design and manage programs that control risk.

## Career Opportunities

The curriculum and degrees offered through the Department of Statistics are designed to equip students with decision-making skills for careers as professional statisticians in industrial organizations, government agencies, insurance companies, pharmaceutical companies, universities, and research institutes. The technical tools statisticians acquire are useful in many areas, and for this reason a statistics degree is also excellent preparation for professional programs in business administration, medicine, law, and public administration.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

## Undergraduate Programs and Degrees

**BS in Actuarial Science** (Program Outcomes)
**BS in Statistics**
**Applied Statistics and Analytics Emphasis** (Program Outcomes)
**Biostatistics Emphasis** (Program Outcomes)
**Statistical Science Emphasis** (Program Outcomes)
**BS-MS in an Integrated Master's Program**

**Minor in Actuarial Science**
**Minor in Statistics**

Students should see their college advisement center for help or information concerning the undergraduate programs.

## Graduate Programs and Degrees

MS in Statistics

For more information see the BYU 2014–2015 Graduate Catalog.

## General Information

1. It is recommended that a student complete the following courses in high school:
   - 3 units of English.
   - 1 unit of physical science, either chemistry or physics.
   - 4 units of mathematics, consisting of 2.5 units of algebra, 1 unit of geometry, and 0.5 unit of trigonometry. This should qualify students to begin college mathematics with Math 112, analytic geometry and calculus.

Because mathematics provides the foundation for all work in the physical and mathematical sciences, particular attention is paid to high school preparation in this subject.

To decide which mathematics course should be taken first, please visit the Mathematics Department website to take a placement exam.

2. Students are encouraged to complete 15 credit hours each semester. Taking fewer credits substantially increases the cost and the number of semesters to graduate.

3. An integrated BS/MS program is available. This program allows Statistics students in the Statistical Science and Biostatistics emphases to receive their bachelor's and master's degree in five years of schooling. It is available to students who have only 6 courses left until completion of the bachelor's degree. Interested students must complete a department application by February 1 for admission Fall semester.

## Program Requirements | View MAP | View Program Outcomes

1. No more than three hours of credit below C- is allowed in major courses.
2. Students must pass Exam P of the Society of Actuaries (SOA) jointly administered as Exam 1 by the Casualty Actuarial Society (CAS) before declaring an actuarial science major.
3. Complete the following preparation core courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

4. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data

- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis

- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

**Note:** Students who have passed the AP statistics exam or an introductory statistics course should not take Stat 121.

5. Complete the following statistics core courses:

STAT 123 : Introduction to R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: STAT 121; or STAT 151; or STAT 201
DESCRIPTION: Base R programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 124 : SAS Base Programming Skills. (1.5:1.5:1.5)

WHEN TAUGHT: Spring
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Base SAS programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 223 : Applied R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: STAT 123
RECOMMENDED: Concurrent enrollment in Stat 124.
DESCRIPTION: Advanced R programming skills; communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 224 : Applied SAS Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: STAT 124
RECOMMENDED: Concurrent enrollment in Stat 123.
DESCRIPTION: Advanced SAS programming skills, advanced DATA step programming, ODS, simple MACRO programs, Proc SQL, Proc REPORT, communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
RECOMMENDED: Concurrent enrollment in MATH 112.
DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

**Course Outcomes**

- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 240 : Discrete Probability. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Set theory; discrete probability; conditional probability; finite sample spaces; discrete random variables (pdf, cdf, moments).

**Course Outcomes**

- Apply fundamentals of set theory and basic set operations
- Enumerate the elements of a discrete sample space

Demonstrate familiarity with counting techniques---sampling with order, without order, binomial coefficients
- Solve probability problems in finite sample spaces
- Solve problems using axioms of probability, conditional probability, independence, and Bayes theorem
- Calculate expected values and variances of discrete random variables
- Understand the assumptions and properties of the named discrete distributions (Bernoulli, binomial, Poisson, geometric)
- Solve problems with the pdf, cdf, moments of discrete univariate random variables

STAT 290 : Communication of Statistical Results. (1:1:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & WRTG 150; or STAT 230 & PHIL 150; or STAT 230 & ENGL 115

DESCRIPTION: Introduction to writing within the discipline including the effective use of graphics, tables, and equations. Resources and guidelines for writing and presenting statistical results.

**Course Outcomes**

- Write a technical report on a statistical analysis
- Create effective statistical graphics
- Use LaTeX to create documents and presentations
- Understand ethical considerations in misleading presentation of data

STAT 330 : Introduction to Regression. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & MATH 112

RECOMMENDED: Stat 123 and Stat 124; MATH 113 or concurrent enrollment.

DESCRIPTION: Regression, transformations, residuals, indicator variables, variable selection, logistic regression, time series, observational studies, statistical software.

**Course Outcomes**

- Explain the difference between ANOVA and regression, and their computational methods
- Explain the difference in inference between a designed experiment and observational study
- Fit a regression model in SAS and R
- Apply appropriate transformations to the response variable to improve agreement with regression assumptions
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Create sets of indicator variables for categorical explanatory variables
- Apply step-wise selection to identify a subset regression model that selects the most significant explanatory variables from a large data set
- Fit a logistic regression model in SAS and R
- Fit an ARIMA(p,d,q) model and generate forecasts with prediction intervals in SAS and R

STAT 340 : Inference. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 240 & MATH 113

RECOMMENDED: Stat 123 and Stat 124.

DESCRIPTION: Continuous random variables (pdf, cdf, moments); sampling distributions; Central Limit Theorem; frequentist inference (estimation, intervals); Bayesian inference (estimation, intervals); simulation.

**Course Outcomes**

- Understand assumptions and properties of named continuous univariate distributions: normal, beta, gamma, exponential
- Solve problems using pdf's and cdf's of continuous distributions
- Calculate expectation, variance, covariance, and correlation
- Understand the Central Limit Theorem via simulation and use it to calculate probabilities
- Make inferences on a population proportion using a random sample from a binomial distribution and on a population mean using a random sample from a normal distribution with known variance, including:deriving the sampling distributions of the sample mean and proportionderiving the posterior distributions of the mean and proportion using conjugate priorsderiving the maximum likelihood and Bayes estimators of the mean and proportionusing a pivot to construct an approximate 100(1 - α)% confidence intervals for the mean and proportionconstructing Bayesian confidence intervals for the mean and proportion

6. Complete the following:

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

: Honors Economic Principles and Problems.

**Course Outcomes**

STAT 274 : Theory of Interest. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: MATH 112
RECOMMENDED: Pass SOA Exam P.
DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

7. Complete 18 credit hours from the following two lists, with a minimum of 12 hours from list A:
   a. Complete 12 hours from the following:

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring
PREREQUISITE: MATH 112
RECOMMENDED: Concurrent enrollment in MATH 113.
DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 370 : Statistical Theory for Actuaries. (3:3:0)

WHEN TAUGHT: Spring
PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314
DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

STAT 424 : Statistical Computing. (3:3:2)

WHEN TAUGHT: Winter
PREREQUISITE: STAT 223 & STAT 224 & STAT 330
DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

STAT 431 : Experimental Design. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: STAT 330

DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 462 : Quality Control and Industrial Statistics. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Six sigma; tools with which to define, measure, analyze, improve, control. Advanced concepts in control charts, applying experimental design for process and product improvement.

**Course Outcomes**

- Explain the role of quality improvement as a business strategy
- Explain the relationship between variability in processes and process outputs and the quality and cost of the results produced
- Use the six sigma DMAIC process for quality improvement projects
- Design and use Shewhard, Cusum, and EWMA control chars to recognize common and special causes of variability
- Construct attribute and variables acceptance sampling plans
- Use other useful quality tools for measurement analysis, discovering root causes, and eliminating quality problems

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 475 : Life Contingencies. (3:3:0)

PREREQUISITE: STAT 474; or STAT 274

DESCRIPTION: Life tables, survival functions, contingent annuities, insurance, premiums, reserves, joint annuities and insurance. Prepares for SOA Exam MLC.

**Course Outcomes**

- The primary learning outcome of this course is to prepare students for Exam MLC offered by the Society of Actuaries
- Recognize, understand, and compute problems relating to survival models, including defining and computing expected values, variances, probabilities, and percentiles for continuous and discrete survival-time random variables
- Recognize, understand, and compute problems relating to life insurances and annuities, including expected values, variances and probabilities for present-value-of-benefit random variables defined on survival-time random variables, considerations for life insurances and annuities, and liabilities analyzing the present value-of-future-loss random variables

STAT 477 : Statistical Distributions for Actuarial Modeling and Data Analytics. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Analyze data from a risk-based application; select a suitable model and estimate parameters using MLE, method of moments, and Bayes methods; determine goodness of fit and measures of confidence for decision making.

**Course Outcomes**

There are no course outcomes available

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

b. Complete 6 hours from the following:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

**Course Outcomes**

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.

- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

ACC 310 : Principles of Accounting 2. (3:3:0)

OFFERED: Available on BYU campus only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ACC 200

DESCRIPTION: Additional issues in financial and managerial accounting. Review of issues related to balance sheet accounts, performance evaluation and capital budgeting.

**Course Outcomes**

- Construct and interpret both a balance sheet and income statement that include elements more advanced than the basic items introduced in Acc 200.
- Construct and interpret a statement of cash flows.
- Apply the financial accounting rules that exist in the following areas:a. Revenue recognition (including SAB 101)b. Inventoryc. Long-term assets (including impairment)d. Bondse. Leases (including the financial ratio impact of operating leases)f. Stockholders' equity (including accumulated other comprehensive income)g. Investment securities (including use of the market adjustment account)
- Employ the time value of money in a financial accounting context.
- Apply managerial accounting concepts in the following areas:a. Use the concepts of financial leverage and operating leverage to assess a company's riskiness.b. Perform cost-volume-profit analysis using regresssion to identify the fixed and variable components of a mixed cost and in multiple-product settings.c. Track product costs through a manufacturing process (including use of process costing).d. identify problems through the use of cost variance analysis.
- Construct and use simple Excel spreadsheets in a variety of business settings.
- Independently manage time and workload for a variety of tasks.

ECON 380 : Intermediate Price Theory 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 110 & MATH 112

DESCRIPTION: Producer, consumer, and equilibrium theories; mathematical techniques of unconstrained and constrained optimization introduced and applied extensively.

**Course Outcomes**

- Recognize the common building blocks of economic models (actors, choices, objectives, constraints)Solve economic models (constrained optimization, equilibrium conditions) Interpret the results (comparative statics)Explain concepts using graphs, prose, and mathematical analysis
- ConsumerThe axioms upon which standard microeconomic consumer theory is based.The implications of consumer demand including price and income responses in absolute and elasticity forms in both utility maximization and expenditure minimization problems.FirmsThe meaning and representation of technologyThe implications of cost and profit maximization for firmsMarketsIntegrate consumers and producers into a market in order to perform market analysis on equilibrium traded quantities and pricesUse market analysis to understand the effects of public policy
- Compare the impact on equilibrium behavior of altering the assumptions of canonical modelsContrast the results of different market imperfections

ECON 381 : Intermediate Macroeconomics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 110 & MATH 112; Math 112 can be concurrent enrollment.

DESCRIPTION: Intermediate macroeconomic theory, emphasizing income, unemployment, and price-level analysis.

**Course Outcomes**

- Demonstrate an understanding of the nature and construction of key macroeconomic data;Demonstrate an understanding of the connection between microeconomics and macroeconomics;Demonstrate an understanding of standard models ofeconomic growthlong-run macroeconomic behaviorshort-run macroeconomic behaviorUse these models to analyze the macroeconomic effects of monetary and fiscal policy changes as well as other economic shocks;Use these models to interpret historical and current events; andDemonstrate an understanding of issues regarding the value and limitations of monetary and fiscal policy.

ECON 382 : Intermediate Price Theory 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 378 & ECON 380; or STAT 201 & MATH 313 & ECON 380

DESCRIPTION: Welfare theory, imperfect information, imperfect competition, uncertainty, externalities, and public goods.

**Course Outcomes**

- Formally express and analyze economic modelsRecognize the common building blocks of economic models (actors, choices, objectives, constraints)Solve economic models (constrained optimization, equilibrium conditions)Interpret the results (comparative statics)Demonstrate an understanding of the core microeconomic models ofPerfect competition in general equilibrium (exchange and production)Monopoly and oligopolyExternalities and public goodsDecision-making under uncertainty (expected utility)Information problems (moral hazard, adverse selection)Adapt models to new scenariosCompare the impact on equilibrium behavior of altering the assumptions of canonical modelsContrast the results of different market imperfectionsEstablish a knowledge base that will be useful in economic field classesApply models in various real-world examples and identify the positive and normative conclusions in that environment

ECON 388 : Introduction to Econometrics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 378 & ECON 380; or STAT 201 & MATH 313 & ECON 380

DESCRIPTION: Mathematical and statistical techniques used in estimating, predicting, and testing hypotheses associated with quantifiable economic relationships.

**Course Outcomes**

- Demonstrate an understanding of the theoretical foundations of estimating and testing the basic regression model, employing tools from matrix algebra, calculus, and statistics.Perform basic regression and testing procedures using Stata. Complete an empirical research project that includes the following elements:.Formulate an econometric model.Collect and prepare relevant data for use in estimating the model.Use appropriate methods of estimation.Test relevant behavioral hypotheses.Understand and test the Gauss-Markov assumptions.Analyze and interpret the estimated model.Prepare a written report summarizing the research results.

ECON 450 : Financial Economics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ECON 382 & ECON 388

DESCRIPTION: Theory of financial economics, emphasizing capital markets, investment decisions, choice, capital asset pricing model, futures and options markets, efficient markets, and capital structures.

**Course Outcomes**

- Understand and derive the fundamental relationship between risk and return that is implied by the Capital Asset Pricing Model (CAPM). Students should also know the assumptions necessary for this model to hold and be capable of identifying when potential investment projects satisfy these assumptions.Use linear regression to calculate an asset's historical sensitivity to broad market indices, its implied historical mispricing and an estimate of the asset's idiosyncratic risk. Students should also be capable of performing hypothesis testing on these values.Replicate traditional tests of the CAPM using currently available data.Be capable of collecting and analyzing asset market data to estimate the efficient frontier of risky assets using either Excel or another software package. Students should also be able to understand the efficient frontier mathematically and the reasons that it is useful.Calculate the present value of a stream of payments given an appropriate discount factor. Students should know how to use the CAPM to derive potential discount factors for payment streams.Calculate the yield to maturity of a stream of payments given an observed price. Students should also understand the relationship between the coupon rate of traditional bonds, their price and their yield to maturity.Calculate forward rates for all future periods given the observed yield curve.Understand the liquidity preference theory of bond markets as well as the expectations hypothesis. They should also be able to price complicated payment streams using observations of the yield curve and the expectations hypothesis.Calculate the duration and modified duration of a stream of payments and use these to calculate optimal hedges given an arbitrary position in the fixed income market.Calculate and understand bond convexity and its role (along with duration) in hedging.Price forward contracts by arbitrage given a risk-free rate.Price futures contracts whose payoffs are not correlated with the market reinvestment rate. Understand currently used hypotheses regarding futures contract pricing.Understand the structure of call and put options.Price put options given a call option (and vice versa) using the put-call parity relationship.Apply the Black-Scholes option pricing formula to price call and put options given beliefs about the volatility of the underlying asset.Apply the Black-Scholes option pricing formula to calculate the implied volatility of an asset given its price.

ECON 588 : Advanced Econometrics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: ECON 388

DESCRIPTION: Theory and practice of formulating, estimating, and analyzing economic models.

**Course Outcomes**

- Demonstrate a familiarity with the properties and applications of several families of statistical distributions to econometric problems.Demonstrate an understanding of variations and generalizations of the basic regression model includingGeneralized least squaresGeneralized autoregressive conditional heteroskedasticity modelsInstrumental variablesSeemingly unrelated regression modelsPanel dataHausman specification tests.Demonstrate an understanding of estimation frameworks in econometric models includingParametric, semiparametric, and non parametric specificationsMaximum likelihood, M-, generalized method of moments, kernel, empirical likelihood, and extremum estimation.Formulate and estimate various nonlinear models.Identify and estimate autoregressive integrated moving average (ARIMA) models and obtain forecasts of economic variables.Demonstrate an understanding of dynamic (and static) structural econometric models including being able to discussReduced form, structural, and transfer function representationsThe identification problemIssues of estimation and statistical inferenceVector autoregression models.Complete a research project in which they formulate a research question, apply appropriate methods to answer the question, and prepare a paper summarizing their results.

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Acc 200.

DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

**Course Outcomes**

There are no course outcomes available

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 370 : Statistical Theory for Actuaries. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314

DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

STAT 424 : Statistical Computing. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 223 & STAT 224 & STAT 330

DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

STAT 431 : Experimental Design. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330

DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 462 : Quality Control and Industrial Statistics. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Six sigma; tools with which to define, measure, analyze, improve, control. Advanced concepts in control charts, applying experimental design for process and product improvement.

**Course Outcomes**

- Explain the role of quality improvement as a business strategy
- Explain the relationship between variability in processes and process outputs and the quality and cost of the results produced
- Use the six sigma DMAIC process for quality improvement projects
- Design and use Shewhard, Cusum, and EWMA control chars to recognize common and special causes of variability
- Construct attribute and variables acceptance sampling plans
- Use other useful quality tools for measurement analysis, discovering root causes, and eliminating quality problems

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 475 : Life Contingencies. (3:3:0)

PREREQUISITE: STAT 474; or STAT 274

DESCRIPTION: Life tables, survival functions, contingent annuities, insurance, premiums, reserves, joint annuities and insurance. Prepares for SOA Exam MLC.

**Course Outcomes**

- The primary learning outcome of this course is to prepare students for Exam MLC offered by the Society of Actuaries
- Recognize, understand, and compute problems relating to survival models, including defining and computing expected values, variances, probabilities, and percentiles for continuous and discrete survival-time random variables
- Recognize, understand, and compute problems relating to life insurances and annuities, including expected values, variances and probabilities for present-value-of-benefit random variables defined on survival-time random variables, considerations for life insurances and annuities, and liabilities analyzing the present□value-of-future-loss random variables

STAT 477 : Statistical Distributions for Actuarial Modeling and Data Analytics. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Analyze data from a risk-based application; select a suitable model and estimate parameters using MLE, method of moments, and Bayes methods; determine goodness of fit and measures of confidence for decision making.

**Course Outcomes**

There are no course outcomes available

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

**Note**: Courses used in List A will not double count in List B.

## Recommended Courses

It is recommended that students take Acc 200, Econ 110, and Fin 201 to complete the Society of Actuaries Economics and Corporate Finance VEEs.

*Hours include courses that may fulfill university core requirements.

## Program Requirements | View MAP | View Program Outcomes

1. No more than three hours of credit below C- is allowed in major courses.
2. Complete the following preparation core courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

3. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation

- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis
- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

**Note:** Students who have passed the AP statistics exam or an introductory statistics course should not take Stat 121.

4. Complete the following statistics core courses:

STAT 123 : Introduction to R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 121; or STAT 151; or STAT 201

DESCRIPTION: Base R programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 124 : SAS Base Programming Skills. (1.5:1.5:1.5)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Base SAS programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 223 : Applied R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 123

RECOMMENDED: Concurrent enrollment in Stat 124.

DESCRIPTION: Advanced R programming skills; communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 224 : Applied SAS Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 124

RECOMMENDED: Concurrent enrollment in Stat 123.

DESCRIPTION: Advanced SAS programming skills, advanced DATA step programming, ODS, simple MACRO programs, Proc SQL, Proc REPORT, communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

**Course Outcomes**

- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 240 : Discrete Probability. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Set theory; discrete probability; conditional probability; finite sample spaces; discrete random variables (pdf, cdf, moments).

**Course Outcomes**

- Apply fundamentals of set theory and basic set operations
- Enumerate the elements of a discrete sample space
- Demonstrate familiarity with counting techniques---sampling with order, without order, binomial coefficients
- Solve probability problems in finite sample spaces

Solve problems using axioms of probability, conditional probability, independence, and Bayes theorem
- Calculate expected values and variances of discrete random variables
- Understand the assumptions and properties of the named discrete distributions (Bernoulli, binomial, Poisson, geometric)
- Solve problems with the pdf, cdf, moments of discrete univariate random variables

STAT 290 : Communication of Statistical Results. (1:1:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & WRTG 150; or STAT 230 & PHIL 150; or STAT 230 & ENGL 115

DESCRIPTION: Introduction to writing within the discipline including the effective use of graphics, tables, and equations. Resources and guidelines for writing and presenting statistical results.

**Course Outcomes**

- Write a technical report on a statistical analysis
- Create effective statistical graphics
- Use LaTeX to create documents and presentations
- Understand ethical considerations in misleading presentation of data

STAT 330 : Introduction to Regression. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & MATH 112

RECOMMENDED: Stat 123 and Stat 124; MATH 113 or concurrent enrollment.

DESCRIPTION: Regression, transformations, residuals, indicator variables, variable selection, logistic regression, time series, observational studies, statistical software.

**Course Outcomes**

- Explain the difference between ANOVA and regression, and their computational methods
- Explain the difference in inference between a designed experiment and observational study
- Fit a regression model in SAS and R
- Apply appropriate transformations to the response variable to improve agreement with regression assumptions
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Create sets of indicator variables for categorical explanatory variables
- Apply step-wise selection to identify a subset regression model that selects the most significant explanatory variables from a large data set
- Fit a logistic regression model in SAS and R
- Fit an ARIMA(p,d,q) model and generate forecasts with prediction intervals in SAS and R

STAT 340 : Inference. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 240 & MATH 113

RECOMMENDED: Stat 123 and Stat 124.

DESCRIPTION: Continuous random variables (pdf, cdf, moments); sampling distributions; Central Limit Theorem; frequentist inference (estimation, intervals); Bayesian inference (estimation, intervals); simulation.

**Course Outcomes**

- Understand assumptions and properties of named continuous univariate distributions: normal, beta, gamma, exponential
- Solve problems using pdf's and cdf's of continuous distributions
- Calculate expectation, variance, covariance, and correlation
- Understand the Central Limit Theorem via simulation and use it to calculate probabilities
- Make inferences on a population proportion using a random sample from a binomial distribution and on a population mean using a random sample from a normal distribution with known variance, including:deriving the sampling distributions of the sample mean and proportionderiving the posterior distributions of the mean and proportion using conjugate priorsderiving the maximum likelihood and Bayes estimators of the mean and proportionusing a pivot to construct an approximate 100(1 - α)% confidence intervals for the mean and proportionconstructing Bayesian confidence intervals for the mean and proportion

5. Complete the following:

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

: Honors Economic Principles and Problems.

**Course Outcomes**

STAT 424 : Statistical Computing. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 223 & STAT 224 & STAT 330

DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

6. Complete 18 credit hours from the following two lists, with a minimum of 12 hours from list A:
   a. Complete 12 hours from the following:

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 274 : Theory of Interest. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 370 : Statistical Theory for Actuaries. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314

DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

STAT 431 : Experimental Design. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330

DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over

designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 462 : Quality Control and Industrial Statistics. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Six sigma; tools with which to define, measure, analyze, improve, control. Advanced concepts in control charts, applying experimental design for process and product improvement.

**Course Outcomes**

- Explain the role of quality improvement as a business strategy
- Explain the relationship between variability in processes and process outputs and the quality and cost of the results produced
- Use the six sigma DMAIC process for quality improvement projects
- Design and use Shewhard, Cusum, and EWMA control chars to recognize common and special causes of variability
- Construct attribute and variables acceptance sampling plans
- Use other useful quality tools for measurement analysis, discovering root causes, and eliminating quality problems

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 475 : Life Contingencies. (3:3:0)

PREREQUISITE: STAT 474; or STAT 274

DESCRIPTION: Life tables, survival functions, contingent annuities, insurance, premiums, reserves, joint annuities and insurance. Prepares for SOA Exam MLC.

**Course Outcomes**

- The primary learning outcome of this course is to prepare students for Exam MLC offered by the Society of Actuaries
- Recognize, understand, and compute problems relating to survival models, including defining and computing expected values, variances, probabilities, and percentiles for continuous and discrete survival-time random variables
- Recognize, understand, and compute problems relating to life insurances and annuities, including expected values, variances and probabilities for present-value-of-benefit random variables defined on survival-time random variables, considerations for life insurances and annuities, and liabilities analyzing the present☑alue-of-future-loss random variables

STAT 477 : Statistical Distributions for Actuarial Modeling and Data Analytics. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Analyze data from a risk-based application; select a suitable model and estimate parameters using MLE, method of moments, and Bayes methods; determine goodness of fit and measures of confidence for decision making.

**Course Outcomes**

There are no course outcomes available

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

STAT 500 : (Stat-Chem-C S-Geol-Math-MthEd-Phscs) Business Career Essentials in Science and Math. (1.5:1.5:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills necessary to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.
- Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

STAT 538 : Survival Analysis. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

DESCRIPTION: Basic concepts of survival analysis; hazard functions; types of censoring; Kaplan-Meier estimates; Logrank tests; proportional hazard models; examples drawn from clinical and epidemiological literature.

**Course Outcomes**

- Understand the basic underlying theory of survival analysis methods
- Conduct estimation of the survival function for a single sample
- Conduct formal comparison of survival functions for two samples
- Conduct formal analysis through incorporation of covariates
- Conduct formal analysis in high-dimensional, low-sample size settings
- Be able to assess the appropriateness of the use of methods for a given data set (given the scientific questions of interest and given the data characteristics)
- Be able to effectively communicate the results of data analyses

b. Complete 6 hours from the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

RECOMMENDED: Math 290.

DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

: Honors Elementary Linear Algebra. (3:3:1)

**Course Outcomes**

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 313.

DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112
RECOMMENDED: Concurrent enrollment in MATH 113.
DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 274 : Theory of Interest. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: MATH 112
RECOMMENDED: Pass SOA Exam P.
DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 370 : Statistical Theory for Actuaries. (3:3:0)

WHEN TAUGHT: Spring
PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314
DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

STAT 431 : Experimental Design. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: STAT 330
DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 462 : Quality Control and Industrial Statistics. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Six sigma; tools with which to define, measure, analyze, improve, control. Advanced concepts in control charts, applying experimental design for process and product improvement.

**Course Outcomes**

- Explain the role of quality improvement as a business strategy
- Explain the relationship between variability in processes and process outputs and the quality and cost of the results produced
- Use the six sigma DMAIC process for quality improvement projects
- Design and use Shewhard, Cusum, and EWMA control chars to recognize common and special causes of variability
- Construct attribute and variables acceptance sampling plans
- Use other useful quality tools for measurement analysis, discovering root causes, and eliminating quality problems

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 475 : Life Contingencies. (3:3:0)

PREREQUISITE: STAT 474; or STAT 274
DESCRIPTION: Life tables, survival functions, contingent annuities, insurance, premiums, reserves, joint annuities and insurance. Prepares for SOA Exam MLC.

**Course Outcomes**

- The primary learning outcome of this course is to prepare students for Exam MLC offered by the Society of Actuaries
- Recognize, understand, and compute problems relating to survival models, including defining and computing expected values, variances, probabilities, and percentiles for continuous and discrete survival-time random variables
- Recognize, understand, and compute problems relating to life insurances and annuities, including expected values, variances and probabilities for present-value-of-benefit random variables defined on survival-time random variables, considerations for life insurances and annuities, and liabilities analyzing the present□value-of-future-loss random variables

STAT 477 : Statistical Distributions for Actuarial Modeling and Data Analytics. (3:3:1)
WHEN TAUGHT: Winter
PREREQUISITE: STAT 340
RECOMMENDED: Pass SOA Exam P.
DESCRIPTION: Analyze data from a risk-based application; select a suitable model and estimate parameters using MLE, method of moments, and Bayes methods; determine goodness of fit and measures of confidence for decision making.

**Course Outcomes**

There are no course outcomes available

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)
PREREQUISITE: Department coordinator's consent.
DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)
PREREQUISITE: Department chair's consent.
DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

STAT 500 : (Stat-Chem-C S-Geol-Math-MthEd-Phscs) Business Career Essentials in Science and Math. (1.5:1.5:0)
WHEN TAUGHT: Winter
DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills necessary to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.
- Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

STAT 538 : Survival Analysis. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: STAT 340
DESCRIPTION: Basic concepts of survival analysis; hazard functions; types of censoring; Kaplan-Meier estimates; Logrank tests; proportional hazard models; examples drawn from clinical and epidemiological literature.

**Course Outcomes**

- Understand the basic underlying theory of survival analysis methods
- Conduct estimation of the survival function for a single sample
- Conduct formal comparison of survival functions for two samples
- Conduct formal analysis through incorporation of covariates
- Conduct formal analysis in high-dimensional, low-sample size settings
- Be able to assess the appropriateness of the use of methods for a given data set (given the

scientific questions of interest and given the data characteristics)
- Be able to effectively communicate the results of data analyses

**Note**: Courses used in List A will not double count in List B.

*Hours include courses that may fulfill university core requirements.

1. No more than three hours of credit below C- is allowed in major courses.
2. Complete the following preparation core courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

3. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation

- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis
- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

**Note:** Students who have passed the AP statistics exam or an introductory statistics course should not take Stat 121.

4. Complete the following statistics core courses:

STAT 123 : Introduction to R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 121; or STAT 151; or STAT 201

DESCRIPTION: Base R programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 124 : SAS Base Programming Skills. (1.5:1.5:1.5)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Base SAS programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 223 : Applied R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 123

RECOMMENDED: Concurrent enrollment in Stat 124.

DESCRIPTION: Advanced R programming skills; communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 224 : Applied SAS Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 124

RECOMMENDED: Concurrent enrollment in Stat 123.

DESCRIPTION: Advanced SAS programming skills, advanced DATA step programming, ODS, simple MACRO programs, Proc SQL, Proc REPORT, communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

**Course Outcomes**

- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 240 : Discrete Probability. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Set theory; discrete probability; conditional probability; finite sample spaces; discrete random variables (pdf, cdf, moments).

**Course Outcomes**

- Apply fundamentals of set theory and basic set operations
- Enumerate the elements of a discrete sample space
- Demonstrate familiarity with counting techniques---sampling with order, without order, binomial coefficients
- Solve probability problems in finite sample spaces

Solve problems using axioms of probability, conditional probability, independence, and Bayes theorem
- Calculate expected values and variances of discrete random variables
- Understand the assumptions and properties of the named discrete distributions (Bernoulli, binomial, Poisson, geometric)
- Solve problems with the pdf, cdf, moments of discrete univariate random variables

STAT 290 : Communication of Statistical Results. (1:1:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & WRTG 150; or STAT 230 & PHIL 150; or STAT 230 & ENGL 115

DESCRIPTION: Introduction to writing within the discipline including the effective use of graphics, tables, and equations. Resources and guidelines for writing and presenting statistical results.

**Course Outcomes**

- Write a technical report on a statistical analysis
- Create effective statistical graphics
- Use LaTeX to create documents and presentations
- Understand ethical considerations in misleading presentation of data

STAT 330 : Introduction to Regression. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & MATH 112

RECOMMENDED: Stat 123 and Stat 124; MATH 113 or concurrent enrollment.

DESCRIPTION: Regression, transformations, residuals, indicator variables, variable selection, logistic regression, time series, observational studies, statistical software.

**Course Outcomes**

- Explain the difference between ANOVA and regression, and their computational methods
- Explain the difference in inference between a designed experiment and observational study
- Fit a regression model in SAS and R
- Apply appropriate transformations to the response variable to improve agreement with regression assumptions
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Create sets of indicator variables for categorical explanatory variables
- Apply step-wise selection to identify a subset regression model that selects the most significant explanatory variables from a large data set
- Fit a logistic regression model in SAS and R
- Fit an ARIMA(p,d,q) model and generate forecasts with prediction intervals in SAS and R

STAT 340 : Inference. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 240 & MATH 113

RECOMMENDED: Stat 123 and Stat 124.

DESCRIPTION: Continuous random variables (pdf, cdf, moments); sampling distributions; Central Limit Theorem; frequentist inference (estimation, intervals); Bayesian inference (estimation, intervals); simulation.

**Course Outcomes**

- Understand assumptions and properties of named continuous univariate distributions: normal, beta, gamma, exponential
- Solve problems using pdf's and cdf's of continuous distributions
- Calculate expectation, variance, covariance, and correlation
- Understand the Central Limit Theorem via simulation and use it to calculate probabilities
- Make inferences on a population proportion using a random sample from a binomial distribution and on a population mean using a random sample from a normal distribution with known variance, including:deriving the sampling distributions of the sample mean and proportionderiving the posterior distributions of the mean and proportion using conjugate priorsderiving the maximum likelihood and Bayes estimators of the mean and proportionusing a pivot to construct an approximate 100(1 - α)% confidence intervals for the mean and proportionconstructing Bayesian confidence intervals for the mean and proportion

5. Complete the following:

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

RECOMMENDED: Math 290.

DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

6. Complete one course from the following:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

**Course Outcomes**

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 111 : Principles of Chemistry. (4:3:3)

OFFERED: Honors also.
WHEN TAUGHT: Fall
PREREQUISITE: Math 110 or equivalent.
RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.
DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.
NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

**Course Outcomes**

7. Complete the following:

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: BIO 130 & CHEM 105; or PDBIO 120 & CHEM 105; or MMBIO 151 & CHEM 105
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.
NOTE: Chem 105 and Chem 111 can also fulfill the prerequisite requirement; contact advisor.

**Course Outcomes**

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

**Course Outcomes**

There are no course outcomes available

8. Complete one course from the following:

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

**Course Outcomes**

- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent; PDBio 210 or 220.

RECOMMENDED: A general biology course.

DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

**Course Outcomes**

- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

PWS 340 : Genetics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

**Course Outcomes**

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

9. Complete 12 credit hours from the following two lists, with a minimum of 6 hours from list A:

a. Complete 6 hours from the following:

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 274 : Theory of Interest. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 424 : Statistical Computing. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 223 & STAT 224 & STAT 330

DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

STAT 431 : Experimental Design. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330

DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test

- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

STAT 538 : Survival Analysis. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

DESCRIPTION: Basic concepts of survival analysis; hazard functions; types of censoring; Kaplan-Meier estimates; Logrank tests; proportional hazard models; examples drawn from clinical and epidemiological literature.

**Course Outcomes**

- Understand the basic underlying theory of survival analysis methods
- Conduct estimation of the survival function for a single sample
- Conduct formal comparison of survival functions for two samples
- Conduct formal analysis through incorporation of covariates
- Conduct formal analysis in high-dimensional, low-sample size settings
- Be able to assess the appropriateness of the use of methods for a given data set (given the scientific questions of interest and given the data characteristics)
- Be able to effectively communicate the results of data analyses

b. Complete 6 hours from the following:

C S 142 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Knowledge of algebra.

DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Stat 121.

DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

**Course Outcomes**

- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.
- Know basic design strategies in Epidemiology.

MATH 341 : Theory of Analysis 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Math 113 and Math 290.

DESCRIPTION: Rigorous treatment of calculus of a single real variable: topology, order, completeness of real numbers; continuity, differentiability, integrability, and convergence of functions.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the real number system and of real-valued functions of a single real variable, with the focus being on the theoretical and logical foundations of single-variable calculus. A secondary purpose of this course is to reinforce students' prior training in discovering and writing valid mathematical proofs.For more detailed information visit the Math 341 Wiki.

MATH 342 : Theory of Analysis 2. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 313 & MATH 341

DESCRIPTION: Rigorous treatment of calculus of several real variables; metric spaces, geometry and topology of Euclidean space, differentiation implicity function theorem, integration on sets and manifolds.

**Course Outcomes**

- Math 342 is the multivariable sequel to Math 341. Itprovides a rigorous treatment of multivariable calculus. Unlike the case with Math 341, Math 342 students are not required to have had an introductory course in the subject matter, so Math 342 needs to treat both computation and theory in some depth.For more detailed information visit the Math 342 Wiki entry.

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.
DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)
WHEN TAUGHT: Fall
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 274 : Theory of Interest. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: MATH 112
RECOMMENDED: Pass SOA Exam P.
DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 424 : Statistical Computing. (3:3:2)
WHEN TAUGHT: Winter
PREREQUISITE: STAT 223 & STAT 224 & STAT 330
DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

STAT 431 : Experimental Design. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: STAT 330
DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: STAT 330; or STAT 511
DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference

- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

STAT 538 : Survival Analysis. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340
DESCRIPTION: Basic concepts of survival analysis; hazard functions; types of censoring; Kaplan-Meier estimates; Logrank tests; proportional hazard models; examples drawn from clinical and epidemiological literature.

**Course Outcomes**

- Understand the basic underlying theory of survival analysis methods
- Conduct estimation of the survival function for a single sample
- Conduct formal comparison of survival functions for two samples
- Conduct formal analysis through incorporation of covariates
- Conduct formal analysis in high-dimensional, low-sample size settings
- Be able to assess the appropriateness of the use of methods for a given data set (given the scientific questions of interest and given the data characteristics)
- Be able to effectively communicate the results of data analyses

**Note**: Courses used in List A will not double count in List B.

## Recommended Courses

It is **strongly recommend** that students interested in graduate study in biostatistics include Math 341 and 342 in their elective lists.

*Hours include courses that may fulfill university core requirements.

1. No more than three hours of credit below C- is allowed in major courses.
2. Complete the following preparation core courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

3. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation

- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis
- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

**Note:** Students who have passed the AP statistics exam or an introductory statistics course should not take Stat 121.

4. Complete the following statistics core courses:

STAT 123 : Introduction to R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 121; or STAT 151; or STAT 201

DESCRIPTION: Base R programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 124 : SAS Base Programming Skills. (1.5:1.5:1.5)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Base SAS programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 223 : Applied R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 123

RECOMMENDED: Concurrent enrollment in Stat 124.

DESCRIPTION: Advanced R programming skills; communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 224 : Applied SAS Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 124

RECOMMENDED: Concurrent enrollment in Stat 123.

DESCRIPTION: Advanced SAS programming skills, advanced DATA step programming, ODS, simple MACRO programs, Proc SQL, Proc REPORT, communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

**Course Outcomes**

- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 240 : Discrete Probability. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Set theory; discrete probability; conditional probability; finite sample spaces; discrete random variables (pdf, cdf, moments).

**Course Outcomes**

- Apply fundamentals of set theory and basic set operations
- Enumerate the elements of a discrete sample space
- Demonstrate familiarity with counting techniques---sampling with order, without order, binomial coefficients
- Solve probability problems in finite sample spaces

Solve problems using axioms of probability, conditional probability, independence, and Bayes theorem
- Calculate expected values and variances of discrete random variables
- Understand the assumptions and properties of the named discrete distributions (Bernoulli, binomial, Poisson, geometric)
- Solve problems with the pdf, cdf, moments of discrete univariate random variables

STAT 290 : Communication of Statistical Results. (1:1:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & WRTG 150; or STAT 230 & PHIL 150; or STAT 230 & ENGL 115

DESCRIPTION: Introduction to writing within the discipline including the effective use of graphics, tables, and equations. Resources and guidelines for writing and presenting statistical results.

**Course Outcomes**

- Write a technical report on a statistical analysis
- Create effective statistical graphics
- Use LaTeX to create documents and presentations
- Understand ethical considerations in misleading presentation of data

STAT 330 : Introduction to Regression. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & MATH 112

RECOMMENDED: Stat 123 and Stat 124; MATH 113 or concurrent enrollment.

DESCRIPTION: Regression, transformations, residuals, indicator variables, variable selection, logistic regression, time series, observational studies, statistical software.

**Course Outcomes**

- Explain the difference between ANOVA and regression, and their computational methods
- Explain the difference in inference between a designed experiment and observational study
- Fit a regression model in SAS and R
- Apply appropriate transformations to the response variable to improve agreement with regression assumptions
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Create sets of indicator variables for categorical explanatory variables
- Apply step-wise selection to identify a subset regression model that selects the most significant explanatory variables from a large data set
- Fit a logistic regression model in SAS and R
- Fit an ARIMA(p,d,q) model and generate forecasts with prediction intervals in SAS and R

STAT 340 : Inference. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 240 & MATH 113

RECOMMENDED: Stat 123 and Stat 124.

DESCRIPTION: Continuous random variables (pdf, cdf, moments); sampling distributions; Central Limit Theorem; frequentist inference (estimation, intervals); Bayesian inference (estimation, intervals); simulation.

**Course Outcomes**

- Understand assumptions and properties of named continuous univariate distributions: normal, beta, gamma, exponential
- Solve problems using pdf's and cdf's of continuous distributions
- Calculate expectation, variance, covariance, and correlation
- Understand the Central Limit Theorem via simulation and use it to calculate probabilities
- Make inferences on a population proportion using a random sample from a binomial distribution and on a population mean using a random sample from a normal distribution with known variance, including:deriving the sampling distributions of the sample mean and proportionderiving the posterior distributions of the mean and proportion using conjugate priorsderiving the maximum likelihood and Bayes estimators of the mean and proportionusing a pivot to construct an approximate 100(1 - α)% confidence intervals for the mean and proportionconstructing Bayesian confidence intervals for the mean and proportion

5. Complete the following:

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

RECOMMENDED: Math 290.

DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

**Course Outcomes**

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 314 : Calculus of Several Variables. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 313.
DESCRIPTION: Partial differentiation, the Jacobian matrix, and integral theorems of vector calculus.

**Course Outcomes**

- This course is aimed at students majoring in mathematical and physical sciences, and engineering, and students minoring in mathematics or mathematical education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed manipulative skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus of several variables extends the concepts of limit, integral, and derivative from one dimension to higher dimensional settings and is therefore fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information visit the Math 314 Wiki page.

6. Complete 18 credit hours from the following two lists, with a minimum of 12 hours from list A:
   a. Complete 12 hours from the following:

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring
PREREQUISITE: MATH 112
RECOMMENDED: Concurrent enrollment in MATH 113.
DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 274 : Theory of Interest. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: MATH 112
RECOMMENDED: Pass SOA Exam P.
DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 370 : Statistical Theory for Actuaries. (3:3:0)

WHEN TAUGHT: Spring
PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314
DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

STAT 424 : Statistical Computing. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 223 & STAT 224 & STAT 330

DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

STAT 431 : Experimental Design. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330

DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 462 : Quality Control and Industrial Statistics. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Six sigma; tools with which to define, measure, analyze, improve, control. Advanced concepts in control charts, applying experimental design for process and product improvement.

**Course Outcomes**

- Explain the role of quality improvement as a business strategy
- Explain the relationship between variability in processes and process outputs and the quality and cost of the results produced
- Use the six sigma DMAIC process for quality improvement projects
- Design and use Shewhard, Cusum, and EWMA control chars to recognize common and special causes of variability
- Construct attribute and variables acceptance sampling plans
- Use other useful quality tools for measurement analysis, discovering root causes, and eliminating quality problems

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 475 : Life Contingencies. (3:3:0)

PREREQUISITE: STAT 474; or STAT 274

DESCRIPTION: Life tables, survival functions, contingent annuities, insurance, premiums, reserves, joint annuities and insurance. Prepares for SOA Exam MLC.

**Course Outcomes**

- The primary learning outcome of this course is to prepare students for Exam MLC offered by the Society of Actuaries
- Recognize, understand, and compute problems relating to survival models, including defining and computing expected values, variances, probabilities, and percentiles for continuous and discrete survival-time random variables
- Recognize, understand, and compute problems relating to life insurances and annuities, including expected values, variances and probabilities for present-value-of-benefit random variables defined on survival-time random variables, considerations for life insurances and annuities, and liabilities analyzing the present☑value-of-future-loss random variables

STAT 477 : Statistical Distributions for Actuarial Modeling and Data Analytics. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Analyze data from a risk-based application; select a suitable model and estimate parameters using MLE, method of moments, and Bayes methods; determine goodness of fit and measures of confidence for decision making.

**Course Outcomes**

There are no course outcomes available

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

STAT 538 : Survival Analysis. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: STAT 340
DESCRIPTION: Basic concepts of survival analysis; hazard functions; types of censoring; Kaplan-Meier estimates; Logrank tests; proportional hazard models; examples drawn from clinical and epidemiological literature.

**Course Outcomes**

- Understand the basic underlying theory of survival analysis methods
- Conduct estimation of the survival function for a single sample
- Conduct formal comparison of survival functions for two samples
- Conduct formal analysis through incorporation of covariates
- Conduct formal analysis in high-dimensional, low-sample size settings
- Be able to assess the appropriateness of the use of methods for a given data set (given the scientific questions of interest and given the data characteristics)
- Be able to effectively communicate the results of data analyses

b. Complete 6 hours from the following:

C S 142 : Introduction to Computer Programming. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Knowledge of algebra.
DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

**Course Outcomes**

- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

MATH 334 : Ordinary Differential Equations. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 113 and Math 313.
DESCRIPTION: Methods and theory of ordinary differential equations.

**Course Outcomes**

There are no course outcomes available

MATH 341 : Theory of Analysis 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Math 113 and Math 290.
DESCRIPTION: Rigorous treatment of calculus of a single real variable: topology, order, completeness of real numbers; continuity, differentiability, integrability, and convergence of functions.

**Course Outcomes**

- The main purpose of this course is to provide students with an understanding of the real number system and of real-valued functions of a single real variable, with the focus being on the theoretical and logical foundations of single-variable calculus. A secondary purpose of this course is to reinforce students' prior training in discovering and writing valid mathematical proofs.For more detailed information visit the Math 341 Wiki.

MATH 342 : Theory of Analysis 2. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MATH 313 & MATH 341
DESCRIPTION: Rigorous treatment of calculus of several real variables; metric spaces, geometry and topology of Euclidean space, differentiation implicity function theorem, integration on sets and manifolds.

**Course Outcomes**

- Math 342 is the multivariable sequel to Math 341. Itprovides a rigorous treatment of multivariable calculus. Unlike the case with Math 341, Math 342 students are not required to have had an introductory course in the subject matter, so Math 342 needs to treat both computation and theory in some depth.For more detailed information visit the Math 342 Wiki entry.

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)
WHEN TAUGHT: Fall; Spring
PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.
DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 234 : Methods of Survey Sampling. (3:3:2)
WHEN TAUGHT: Fall
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 274 : Theory of Interest. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: MATH 112
RECOMMENDED: Pass SOA Exam P.
DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 370 : Statistical Theory for Actuaries. (3:3:0)
WHEN TAUGHT: Spring
PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314
DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

STAT 424 : Statistical Computing. (3:3:2)
WHEN TAUGHT: Winter
PREREQUISITE: STAT 223 & STAT 224 & STAT 330
DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

STAT 431 : Experimental Design. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: STAT 330
DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a

randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 462 : Quality Control and Industrial Statistics. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Six sigma; tools with which to define, measure, analyze, improve, control. Advanced concepts in control charts, applying experimental design for process and product improvement.

**Course Outcomes**

- Explain the role of quality improvement as a business strategy
- Explain the relationship between variability in processes and process outputs and the quality and cost of the results produced
- Use the six sigma DMAIC process for quality improvement projects
- Design and use Shewhard, Cusum, and EWMA control chars to recognize common and special causes of variability
- Construct attribute and variables acceptance sampling plans
- Use other useful quality tools for measurement analysis, discovering root causes, and eliminating quality problems

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 475 : Life Contingencies. (3:3:0)

PREREQUISITE: STAT 474; or STAT 274

DESCRIPTION: Life tables, survival functions, contingent annuities, insurance, premiums, reserves, joint annuities and insurance. Prepares for SOA Exam MLC.

**Course Outcomes**

- The primary learning outcome of this course is to prepare students for Exam MLC offered by the Society of Actuaries
- Recognize, understand, and compute problems relating to survival models, including defining and computing expected values, variances, probabilities, and percentiles for continuous and discrete survival-time random variables
- Recognize, understand, and compute problems relating to life insurances and annuities, including expected values, variances and probabilities for present-value-of-benefit random variables defined on survival-time random variables, considerations for life insurances and annuities, and liabilities analyzing the present□value-of-future-loss random variables

STAT 477 : Statistical Distributions for Actuarial Modeling and Data Analytics. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Analyze data from a risk-based application; select a suitable model and estimate parameters using MLE, method of moments, and Bayes methods; determine goodness of fit and measures of confidence for decision making.

**Course Outcomes**

There are no course outcomes available

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

STAT 538 : Survival Analysis. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

DESCRIPTION: Basic concepts of survival analysis; hazard functions; types of censoring; Kaplan-Meier estimates; Logrank tests; proportional hazard models; examples drawn from clinical and epidemiological literature.

**Course Outcomes**

- Understand the basic underlying theory of survival analysis methods
- Conduct estimation of the survival function for a single sample
- Conduct formal comparison of survival functions for two samples
- Conduct formal analysis through incorporation of covariates
- Conduct formal analysis in high-dimensional, low-sample size settings
- Be able to assess the appropriateness of the use of methods for a given data set (given the scientific questions of interest and given the data characteristics)
- Be able to effectively communicate the results of data analyses

**Note**: Courses used in List A will not double count in List B.

## Recommended Courses

It is **strongly recommended** that students interested in graduate study in statistics choose electives to prepare for the BYU BS/MS statistics integrated program by meeting with the statistics graduate coordinator.

*Hours include courses that may fulfill university core requirements.

## Program Requirements

1. Students must pass Exam P of the Society of Actuaries (SOA) jointly administered as Exam 1 by the Casualty Actuarial Society (CAS) before declaring an actuarial science minor.

2. Complete the following courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

3. Complete the following courses preparing for SOA Exams:

STAT 274 : Theory of Interest. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: MATH 112
RECOMMENDED: Pass SOA Exam P.
DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 340 : Inference. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: STAT 240 & MATH 113
RECOMMENDED: Stat 123 and Stat 124.

DESCRIPTION: Continuous random variables (pdf, cdf, moments); sampling distributions; Central Limit Theorem; frequentist inference (estimation, intervals); Bayesian inference (estimation, intervals); simulation.

**Course Outcomes**

- Understand assumptions and properties of named continuous univariate distributions: normal, beta, gamma, exponential
- Solve problems using pdf's and cdf's of continuous distributions
- Calculate expectation, variance, covariance, and correlation
- Understand the Central Limit Theorem via simulation and use it to calculate probabilities
- Make inferences on a population proportion using a random sample from a binomial distribution and on a population mean using a random sample from a normal distribution with known variance, including:deriving the sampling distributions of the sample mean and proportionderiving the posterior distributions of the mean and proportion using conjugate priorsderiving the maximum likelihood and Bayes estimators of the mean and proportionusing a pivot to construct an approximate 100(1 - α)% confidence intervals for the mean and proportionconstructing Bayesian confidence intervals for the mean and proportion

4. Complete the courses in one of the following categories:

To complete Applied Statistics VEE:

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

**Course Outcomes**

- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 330 : Introduction to Regression. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & MATH 112

RECOMMENDED: Stat 123 and Stat 124; MATH 113 or concurrent enrollment.

DESCRIPTION: Regression, transformations, residuals, indicator variables, variable selection, logistic regression, time series, observational studies, statistical software.

**Course Outcomes**

- Explain the difference between ANOVA and regression, and their computational methods
- Explain the difference in inference between a designed experiment and observational study
- Fit a regression model in SAS and R
- Apply appropriate transformations to the response variable to improve agreement with regression assumptions
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Create sets of indicator variables for categorical explanatory variables
- Apply step-wise selection to identify a subset regression model that selects the most significant explanatory variables from a large data set
- Fit a logistic regression model in SAS and R
- Fit an ARIMA(p,d,q) model and generate forecasts with prediction intervals in SAS and R

To complete Business VEE:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

**Course Outcomes**

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent

fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Acc 200.

DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

**Course Outcomes**

There are no course outcomes available

To complete Economics VEE:

ECON 380 : Intermediate Price Theory 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 110 & MATH 112

DESCRIPTION: Producer, consumer, and equilibrium theories; mathematical techniques of unconstrained and constrained optimization introduced and applied extensively.

**Course Outcomes**

- Recognize the common building blocks of economic models (actors, choices, objectives, constraints)Solve economic models (constrained optimization, equilibrium conditions) Interpret the results (comparative statics)Explain concepts using graphs, prose, and mathematical analysis
- ConsumerThe axioms upon which standard microeconomic consumer theory is based.The implications of consumer demand including price and income responses in absolute and elasticity forms in both utility maximization and expenditure minimization problems.FirmsThe meaning and representation of technologyThe implications of cost and profit maximization for firmsMarketsIntegrate consumers and producers into a market in order to perform market analysis on equilibrium traded quantities and pricesUse market analysis to understand the effects of public policy
- Compare the impact on equilibrium behavior of altering the assumptions of canonical modelsContrast the results of different market imperfections

ECON 381 : Intermediate Macroeconomics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 110 & MATH 112; Math 112 can be concurrent enrollment.

DESCRIPTION: Intermediate macroeconomic theory, emphasizing income, unemployment, and price-level analysis.

**Course Outcomes**

- Demonstrate an understanding of the nature and construction of key macroeconomic data;Demonstrate an understanding of the connection between microeconomics and macroeconomics;Demonstrate an understanding of standard models ofeconomic growthlong-run macroeconomic behaviorshort-run macroeconomic behaviorUse these models to analyze the macroeconomic effects of monetary and fiscal policy changes as well as other economic shocks;Use these models to interpret historical and current events; andDemonstrate an understanding of issues regarding the value and limitations of monetary and fiscal policy.

SAS Certification:

STAT 123 : Introduction to R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 121; or STAT 151; or STAT 201

DESCRIPTION: Base R programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 124 : SAS Base Programming Skills. (1.5:1.5:1.5)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Base SAS programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 223 : Applied R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: STAT 123
RECOMMENDED: Concurrent enrollment in Stat 124.
DESCRIPTION: Advanced R programming skills; communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 224 : Applied SAS Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: STAT 124
RECOMMENDED: Concurrent enrollment in Stat 123.
DESCRIPTION: Advanced SAS programming skills, advanced DATA step programming, ODS, simple MACRO programs, Proc SQL, Proc REPORT, communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 424 : Statistical Computing. (3:3:2)

WHEN TAUGHT: Winter
PREREQUISITE: STAT 223 & STAT 224 & STAT 330
DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

*Hours include courses that may fulfill university core requirements.

## Program Requirements

1. Complete one course from the following:

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring
PREREQUISITE: MATH 112
RECOMMENDED: Concurrent enrollment in MATH 113.
DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: MATH 112; or MATH 119
DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous

univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis
- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

**Note:** Students who have passed the AP statistics exam or an introductory statistics course should not take Stat 121.

2. Complete 15 additional credit hours from Stat 123, 124 and courses numbered 223 or higher (excluding Stat 301, 370, 372, 474, 475, 496R, 510, 532, 599R).

*Hours include courses that may fulfill university core requirements.

## Undergraduate Courses

### 100-Level Courses

STAT 105 : Introduction to Statistics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 97 or equivalent.

DESCRIPTION: Fundamental ideas and applications of statistics.

**Course Outcomes**

- Understand and appreciate the value of statistics as a discipline and its relevance for general education
- Evaluate the validity of research findings from observational studies and simple experiments by asking appropriate questions regarding data collection and analysis
- Analyze data using appropriate graphical methods and numerical summaries
- Distinguish between observational studies and experiments in terms of how data is collected and what appropriate conclusions to make
- Determine potential associations between two categorical and between two quantitative variables
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

**Course Outcomes**

STAT 123 : Introduction to R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 121; or STAT 151; or STAT 201

DESCRIPTION: Base R programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 124 : SAS Base Programming Skills. (1.5:1.5:1.5)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Base SAS programming skills, introductory statistical analysis and graphics, simulation of introductory statistical concepts.

**Course Outcomes**

There are no course outcomes available

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

**Course Outcomes**

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 199R : Academic Internship. (.5-3:ARR:ARR)

PREREQUISITE: Department chair's and internship coordinator's consent

DESCRIPTION: Work experience evaluated by supervisor and posted on student's transcript.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship

### 200-Level Courses

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

**Course Outcomes**

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 223 : Applied R Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 123

RECOMMENDED: Concurrent enrollment in Stat 124.

DESCRIPTION: Advanced R programming skills; communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 224 : Applied SAS Programming. (1.5:1.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 124

RECOMMENDED: Concurrent enrollment in Stat 123.

DESCRIPTION: Advanced SAS programming skills, advanced DATA step programming, ODS, simple MACRO programs, Proc SQL,

Proc REPORT, communicate with other packages and programs.

**Course Outcomes**

There are no course outcomes available

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

**Course Outcomes**

- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

**Course Outcomes**

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 240 : Discrete Probability. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Set theory; discrete probability; conditional probability; finite sample spaces; discrete random variables (pdf, cdf, moments).

**Course Outcomes**

- Apply fundamentals of set theory and basic set operations
- Enumerate the elements of a discrete sample space
- Demonstrate familiarity with counting techniques---sampling with order, without order, binomial coefficients
- Solve probability problems in finite sample spaces
- Solve problems using axioms of probability, conditional probability, independence, and Bayes theorem
- Calculate expected values and variances of discrete random variables
- Understand the assumptions and properties of the named discrete distributions (Bernoulli, binomial, Poisson, geometric)
- Solve problems with the pdf, cdf, moments of discrete univariate random variables

STAT 274 : Theory of Interest. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MATH 112

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Theory of interest, annuities, amortization, financial derivatives. Prepares for SOA Exam FM.

**Course Outcomes**

There are no course outcomes available

STAT 290 : Communication of Statistical Results. (1:1:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & WRTG 150; or STAT 230 & PHIL 150; or STAT 230 & ENGL 115

DESCRIPTION: Introduction to writing within the discipline including the effective use of graphics, tables, and equations. Resources and guidelines for writing and presenting statistical results.

**Course Outcomes**

- Write a technical report on a statistical analysis
- Create effective statistical graphics

- Use LaTeX to create documents and presentations
- Understand ethical considerations in misleading presentation of data

**300-Level Courses**

STAT 301 : Statistics and Probability for Secondary Educators. (3:3:2)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: MATH 113

DESCRIPTION: Statistics and probability, emphasizing secondary-specific curriculum. Principles of counting, probability distributions, density functions, graphical methods, descriptive and inferential statistics, computer package.

**Course Outcomes**

- Identify and provide examples of basic statistical terminology, such as population, sample, and random variable
- Construct, read, and interpret data displays and decide the most appropriate procedure for data analysis
- Summarize data graphically and numerically
- Identify elements and distinguish between observational studies and experiments
- Compute probabilities for simple events
- Create and interpret by application of a random variable discrete and normal probability distributions
- Model situations by using experimental or theoretical probabilities
- Become aware of misconceptions and errors about statistics and probability
- Make inferences, draw conclusions, and evaluate arguments from a data analysis
- Explain the need for statistics in understanding real-world processes (i.e., by accounting)
- Develop simple activities to reinforce basic statistical topics to middle school and high school students

STAT 330 : Introduction to Regression. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 230 & MATH 112

RECOMMENDED: Stat 123 and Stat 124; MATH 113 or concurrent enrollment.

DESCRIPTION: Regression, transformations, residuals, indicator variables, variable selection, logistic regression, time series, observational studies, statistical software.

**Course Outcomes**

- Explain the difference between ANOVA and regression, and their computational methods
- Explain the difference in inference between a designed experiment and observational study
- Fit a regression model in SAS and R
- Apply appropriate transformations to the response variable to improve agreement with regression assumptions
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Create sets of indicator variables for categorical explanatory variables
- Apply step-wise selection to identify a subset regression model that selects the most significant explanatory variables from a large data set
- Fit a logistic regression model in SAS and R
- Fit an ARIMA(p,d,q) model and generate forecasts with prediction intervals in SAS and R

STAT 340 : Inference. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 240 & MATH 113

RECOMMENDED: Stat 123 and Stat 124.

DESCRIPTION: Continuous random variables (pdf, cdf, moments); sampling distributions; Central Limit Theorem; frequentist inference (estimation, intervals); Bayesian inference (estimation, intervals); simulation.

**Course Outcomes**

- Understand assumptions and properties of named continuous univariate distributions: normal, beta, gamma, exponential
- Solve problems using pdf's and cdf's of continuous distributions
- Calculate expectation, variance, covariance, and correlation
- Understand the Central Limit Theorem via simulation and use it to calculate probabilities
- Make inferences on a population proportion using a random sample from a binomial distribution and on a population mean using a random sample from a normal distribution with known variance, including:deriving the sampling distributions of the sample mean and proportionderiving the posterior distributions of the mean and proportion using conjugate priorsderiving the maximum likelihood and Bayes estimators of the mean and proportionusing a pivot to construct an approximate 100(1 - α)% confidence intervals for the mean and proportionconstructing Bayesian confidence intervals for the mean and proportion

STAT 370 : Statistical Theory for Actuaries. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 340; Concurrent enrollment in MATH 314

DESCRIPTION: Probability theory; discrete, continuous, mixture random variables; loss distributions; moment-generating functions; conditional probability, expectation; total probability; stochastic independence; transformations. Prepares for SOA Exam P.

**Course Outcomes**

- The assumptions and properties of the following named distributions: Bernoulli, Binomial, Hypergeometric, Negative Binomial, Poisson, Uniform, Gamma, Exponential, Normal, and Pareto
- Probability density functions, cumulative distribution functions, moment generating functions, and moments of univariate random variables
- The properties of joint, conditional, and marginal distributions
- The transformation of random variables using the CDF technique, change of variables, sums of random variables, convolution, and the MGF technique

STAT 372 : Actuarial Problems. (1:2:0)

PREREQUISITE: STAT 370.

DESCRIPTION: Applying mathematical statistics in actuarial science. Prepares for SOA Exam P.

**Course Outcomes**

- The primary learning outcome of this course is to provide additional Exam P preparation for students who have completed Statistics 370
- Students will, upon course completion, be more adept at solving problems related to material covered in Statistics 370

**400-Level Courses**

STAT 424 : Statistical Computing. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 223 & STAT 224 & STAT 330

DESCRIPTION: Create and interact with relational databases comprised of large real world data; integrate previous course work into a single research project from formulation to final report; solve statistical problems using a combination of SAS, R, and SQL skills.

**Course Outcomes**

There are no course outcomes available

STAT 431 : Experimental Design. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330

DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

**Course Outcomes**

- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 511

DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

**Course Outcomes**

- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

STAT 451 : Applied Bayesian Statistics. (3:3.0:)

PREREQUISITE: STAT 151 & STAT 330; Concurrent enrollment in STAT 340.

DESCRIPTION: Bayesian analogs of t-tests, regression, ANOVA, ANCOVA, logistic regression, and Poisson regression implemented using both JAGS and Proc MCMC

**Course Outcomes**

- Students will be able to apply, implement and interpret a fully Bayesian approach to relevant statistical problems, including design, model selection, model fit steps.
- Students will be able to generate their own analysis of Bayesian models in R.
- Students will be able to understand, explain and demonstrate basic Bayesian theory and its usefulness in real-world applications.

STAT 462 : Quality Control and Industrial Statistics. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Six sigma; tools with which to define, measure, analyze, improve, control. Advanced concepts in control charts, applying experimental design for process and product improvement.

**Course Outcomes**

- Explain the role of quality improvement as a business strategy

- Explain the relationship between variability in processes and process outputs and the quality and cost of the results produced
- Use the six sigma DMAIC process for quality improvement projects
- Design and use Shewhard, Cusum, and EWMA control chars to recognize common and special causes of variability
- Construct attribute and variables acceptance sampling plans
- Use other useful quality tools for measurement analysis, discovering root causes, and eliminating quality problems

STAT 466 : Introduction to Reliability. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 330; or STAT 340

DESCRIPTION: Mathematics, distributions, management, and maintenance of basic reliability concepts; collection and analysis of test data; fault tree analysis; applying reliability in various areas.

**Course Outcomes**

- Discuss reliability concepts
- Fit standard parametric distributions to censored reliability test data
- Analyze data from accelerated life tests
- Model reliability for simple systems
- Predict field failures
- Analyze repairable systems
- Make reliability plots of data
- Complete basic Bayesian analysis of reliability

STAT 469 : Applied Time Series and Forecasting. (3:3:0)

PREREQUISITE: STAT 330 & STAT 340

DESCRIPTION: Data mining, univariate ARIMA time series theory and application, seasonal models, spatial correlation models, conditional heteroscedastic models in financial time series, case studies.

**Course Outcomes**

- Define the autocovariance and autocorrelation functions
- Define weak stationarity
- Define white noise process
- Derive the mean, autocovariance, and autocorrelation of an AR and MA model
- Define an ARMA (p, q) process
- Select the order of an ARIMA model from the sample ACF and sample PACF
- Fit an ARIMA (p, d, q) model and generate forecasts with prediction intervals in R

STAT 475 : Life Contingencies. (3:3:0)

PREREQUISITE: STAT 474; or STAT 274

DESCRIPTION: Life tables, survival functions, contingent annuities, insurance, premiums, reserves, joint annuities and insurance. Prepares for SOA Exam MLC.

**Course Outcomes**

- The primary learning outcome of this course is to prepare students for Exam MLC offered by the Society of Actuaries
- Recognize, understand, and compute problems relating to survival models, including defining and computing expected values, variances, probabilities, and percentiles for continuous and discrete survival-time random variables
- Recognize, understand, and compute problems relating to life insurances and annuities, including expected values, variances and probabilities for present-value-of-benefit random variables defined on survival-time random variables, considerations for life insurances and annuities, and liabilities analyzing the present value-of-future-loss random variables

STAT 477 : Statistical Distributions for Actuarial Modeling and Data Analytics. (3:3:1)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

RECOMMENDED: Pass SOA Exam P.

DESCRIPTION: Analyze data from a risk-based application; select a suitable model and estimate parameters using MLE, method of moments, and Bayes methods; determine goodness of fit and measures of confidence for decision making.

**Course Outcomes**

There are no course outcomes available

STAT 496R : Academic Internship: Statistics. (.5-9:ARR:ARR)

PREREQUISITE: Department coordinator's consent.

DESCRIPTION: On-the-job experience or internships for undergraduates. Report is required.

**Course Outcomes**

- Practice appropriate dress and etiquette in varied business settings
- Demonstrate good work ethics
- Demonstrate effective written and oral communication skills as they report on their internship experience

STAT 497R : Introduction to Statistical Research. (.5-3:0:6)

PREREQUISITE: Department chair's consent.

DESCRIPTION: Review of current literature and survey of present status of significant statistical research; collaborative work

between student and faculty.

**Course Outcomes**

- Contribute to the research project in terms of literature review, data analysis, and reporting of preliminary results
- Demonstrate good work ethics (punctuality to meetings, follow-up of action items, and so forth)
- Show initiative in the conduct of research

STAT 499R : Honors Thesis. (.5-3:ARR:ARR)

PREREQUISITE: Departmental consent.

**Course Outcomes**

- Perform a literature review
- Understand the principles of the research process
- Apply sound statistical methodology to research situations
- Follow ethical procedures for storing, analyzing, and presenting data
- Document reproducible code
- Display evidence of intellectual/professional growth and development
- Communicate statistical ideas, arguments, and conclusions effectively

## 500-Level Graduate Courses (available to advanced undergraduates)

STAT 500 : (Stat-Chem-C S-Geol-Math-MthEd-Phscs) Business Career Essentials in Science and Math. (1.5:1.5:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction for science, math, and statistics majors to careers in industry. Project planning, oral and written business presentations, business accounting, and technology readiness.

**Course Outcomes**

- Demonstrate knowledge of business skills necessary to function as a scientist working in industry.Be able to explain how corporate politics can affect your career.
- Learn how to present concepts and ideas in a clear and effective manner in both oral and written form.
- Learn to read and understand corporate accounting statements and data and understand the basic ideas of project and portfolio management.Learn the steps to moving an idea from concept to completion in a business setting.

STAT 511 : Statistical Methods for Research 1. (3:3:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: STAT 121; or equivalent.

DESCRIPTION: Basic statistical methodologies and experimental design. Topics include simple analysis of variance, multiple regression, analysis of covariance, model selection.

**Course Outcomes**

- Describe the role of randomization and replication in inferring causation
- Use JMP (or other software) to read in data and compute numerical and graphical summaries of the data
- Use a t-test (one-sample, paired, and two-sample) to perform inference on means and know what the assumptions for use are
- Fit a one-way ANOVA and construct an interpret the ANOVA table in JMP (or other software)
- Fit both simple and multiple linear regression and interpret the results
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Critically read scientific literature of their field involving parametric linear models with a continuous response

STAT 512 : Statistical Methods for Research 2. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 511

DESCRIPTION: Advanced statistical methodologies and experimental design. Topics include multi-way analysis of variance, mixed models analysis of variance, logistic regression, log-linear models, time series models, principal components, canonical correlation, common experimental designs.

**Course Outcomes**

- Fit a two-way ANOVA and interpret the main effects and interaction
- Explain the differences between fixed and random effects and interpret computer output from mixed model analyses
- Identify evidence of autocorrelation and fit an ar(1) model to analyze continuous time series data
- Recognize multivariate data, and appropriately carry out principal components analysis and canoncial correlation analysis using statistical software
- Interpret and calculate odds, odds ratios, risk differences, and relative risks from 2x2 contingency tables and describe which measures are justified in prospective and retrospective studies
- Use X^2 tests and Fisher's Exact tests to assess associations in 2x2 contingency tables
- Fit and interpret simple generalized linear regression models (binary response data and count response data) and draw appropriate conclusions justified by the study design
- Construct a factorial design and a screening design

STAT 535 : Linear Models. (3:3:0)

WHEN Fall

TAUGHT:

PREREQUISITE: Departmental consent.

DESCRIPTION: Theory of estimation and testing in linear models. Analysis of full-rank model, over-parameterized model, cell-means model, unequal subclass frequencies, and missing and fused cells. Estimability issues, diagnostics.

**Course Outcomes**

There are no course outcomes available

STAT 536 : Modern Regression Methods. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 535 & STAT 624; or departmental consent.

DESCRIPTION: Weighted least squares, Bayesian linear models, robust regression, nonlinear regression, local regression, generalized additive models, tree-structured regression.

**Course Outcomes**

- This course trains students in using statistical methods for modeling a response variable as a function of explanatory variables. Stat 535 (a prerequisite) covered linear models, and this course attempts to cover the complement set. At a minimum you will learn the derivation, computation, and application of the different methods on data. As part of the first-year MS core, this course material will be part of the Comprehensive Written Exam.
- Review Linear Regression Models
- Review Weighted Least Squares, Mixed Models
- Bayesian Linear Regression
- Measurement Error Models
- Generalized Linear Models (logistic)
- Model Assessment and Selection
- Shrinkage Methods, Bias-Variance Tradeoff, Subset Selection
- Local Regression (splines, smoothers)
- Generalized Additive Models (GAM)
- Tree-based Models, Random Forests
- Boosting, Bayesian Adaptive Regression Trees
- p >> n

STAT 538 : Survival Analysis. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 340

DESCRIPTION: Basic concepts of survival analysis; hazard functions; types of censoring; Kaplan-Meier estimates; Logrank tests; proportional hazard models; examples drawn from clinical and epidemiological literature.

**Course Outcomes**

- Understand the basic underlying theory of survival analysis methods
- Conduct estimation of the survival function for a single sample
- Conduct formal comparison of survival functions for two samples
- Conduct formal analysis through incorporation of covariates
- Conduct formal analysis in high-dimensional, low-sample size settings
- Be able to assess the appropriateness of the use of methods for a given data set (given the scientific questions of interest and given the data characteristics)
- Be able to effectively communicate the results of data analyses

STAT 590R : Statistical Consulting. (1-3:Arr:0)

PREREQUISITE: Departmental consent.

DESCRIPTION: Introduction to statistical consulting, oral presentations, presentation packages, written reports. Extensive applied experience in the Center for Collaborative Research and Statistical Consulting.

**Course Outcomes**

- Work in a team with members from other disciplines
- Elicit the relevant information from a non-statistician in order to complete the correct statistical analysis
- Communicate statistical concepts to a non-statistician
- Make oral and written presentations of statistical results to a non-statistician

STAT 591R : Graduate Seminar in Statistics. (0:1:0)

WHEN TAUGHT: Fall; Winter

**Course Outcomes**

- Identify areas of emergent statistical research
- Describe elements of the effective presentation of statistical results to a specialized audience

STAT 595R : Special Topics in Statistics. (1-3:ARR:0)

PREREQUISITE: Instructor's consent.

**Course Outcomes**

- This is a course with no set curriculum. The learning objectives will be determined by the directing instructor. The outcomes will be specific to the special topic as directed by the professor. In general, after completion of a special topics course in statistics, the student will:
- Demonstrate understanding of and competence in subject matter, varying by course topic
- Explain the historical context or modern relevance of the selected special topics curriculum
- Develop proficiency in specialized quantitative methods and their use in a modern statistical software package.

: Statistical Computations.

**Course Outcomes**

: Theory of Risk.

**Course Outcomes**

: Expert Systems in Statistics.

**Course Outcomes**

: Biostatistical Methods.

**Course Outcomes**

: Quality Methods.

**Course Outcomes**

: Sampling Practicum.

**Course Outcomes**

STAT 599R : Academic Internship: Statistics. (1-9:0:0)

PREREQUISITE: Departmental consent.

DESCRIPTION: On-the-job experience. Report required.

**Course Outcomes**

- Apply classroom knowledge and skills to day-to-day statistical tasks
- Explore personal career goals and expectations
- Develop problem solving skills
- Practice appropriate dress and etiquette in varied business settings
- Effectively communicate results of statistical analyses to clients, supervisors, and colleagues
- Demonstrate effective written and oral communication skills as they report on their internship experience

MS, Brigham Young University, 1977
MS, Brigham Young University, 1978
MS, University of Washington, 1988
PhD, University of Washington, 1990

Grimshaw, Scott D.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Professor
**DEGREES:** BS, Southern Utah State College, 1983
MS, Texas A&M University, 1985
PhD, Texas A&M University, 1989

Lawson, John S.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Professor
**DEGREES:** AA, Los Angeles Valley College, 1967
BS, Brigham Young University, 1969
MS, Brigham Young University, 1971
MS, Rutgers College, 1976
PhD, Polytechnic Institute of New York, 1984

Reese, C. Shane

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1994
MS, Brigham Young University, 1995
PhD, Texas A&M University, 1999

Schaalje, G. Bruce

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Professor
**DEGREES:** AA, Ricks College, 1975
BS, Brigham Young University, 1977
MS, Brigham Young University, 1979
MS, University of Washington, 1981
PhD, North Carolina State University, 1988

Scott, Del T.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1970
MS, Brigham Young University, 1973
PhD, Pennsylvania State University, 1977

Tolley, Harold Dennis

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Professor
**DEGREES:** BS, Brigham Young University, 1970
PhD, University of North Carolina, Chapel Hill, 1974

## Associate Professors

Dahl, David B.

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Associate Professor
**DEGREES:** BS, Brigham Young University, 1997
MS, Brigham Young University, 1998
PhD, University of Wisconsin-Madison, 2004

Engler, David

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Associate Professor
**DEGREES:** BA, Brigham Young University, 1997
MS, Brigham Young University, 2002
AM, Harvard University, 2006
PhD, Harvard University, 2007

## Assistant Professors

Berrett, Candace

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2005
MS, The Ohio State University, 2007
PhD, The Ohio State University, 2010

Blades, Natalie Jean

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Assistant Professor
**DEGREES:** AB, Wellesley College, 1997
MSE, Johns Hopkins University, 2002
PhD, Johns Hopkins University, 2003

Heaton, Matthew Joseph

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2006
MS, Brigham Young University, 2007
PhD, Duke University, 2011

Tass, Shannon Neeley

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Assistant Professor
**DEGREES:** BS, Brigham Young University, 2001
MS, Brigham Young University, 2003
MA, Rice University, 2008

PhD, Rice University, 2008

## Associate Teaching Professor

Nielsen, Perpetua Lynne

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Associate Teaching Professor
**DEGREES:** BS, University of Philippines, 1973
MS, Brigham Young University, 1984

## Research Associate Professor

Eggett, Dennis Lee

**COLLEGE:** Physical and Mathematical Sciences
**DEPARTMENT:** Statistics
**RANK:** Research Associate Professor
**DEGREES:** BS, Brigham Young University, 1981
MS, Brigham Young University, 1983
PhD, North Carolina State University, 1987

## Purposes

The mission of Religious Education at Brigham Young University is to assist individuals in their efforts to come unto Christ by teaching the scriptures, doctrine, and history of the restored gospel of Jesus Christ through classroom instruction, gospel scholarship, and outreach to the larger community.

Religious Education oversees the teaching of and research into scripture, doctrine, LDS and Christian church history, and world religions. We strive to create a learning environment and provide resources that are "spiritually strengthening, intellectually enlarging, and character building" and an educational experience that results in "lifelong learning and service" (The Aims of a BYU Education).

Religious Education seeks to spread the light of restored truth to Latter-day Saints and to those not of the LDS faith in three ways:

1. Instruction. We seek in Religious Education to find new ways and more effective ways to communicate timeless truths and to provide "a stimulating setting where a commitment to excellence is expected and the full realization of human potential is pursued" (BYU Mission Statement). In general, we search for ways to enhance the educational experience and to build a faith in and a commitment to the restored gospel that is as stimulating and satisfying to the mind as it is soothing and settling to the heart.
2. Scholarship. The search for new truths and the quest to better understand well-known truths are central to the work of Religious Education. While the ultimate interpretation of doctrinal matters rests with apostles and prophets, we seek to discover historical backgrounds, provide cultural and linguistic details, and explore new avenues of understanding into our faith, history, and way of life.
3. Outreach. An important dimension of the work of Religious Education is outreach, the effort to teach, share, and discuss Mormonism in the larger non-LDS community of scholars and to foster understanding between men and women of all faiths.

## Degrees Offered

Religious Education offers two programs leading to a master's degree: **Religious Education Master of Arts** designed for individuals recommended by Seminaries and Institutes and **Religious Studies Master of Arts** for military chaplaincy candidates.

For further information on these programs, please contact Religious Education, 370 JSB, (801) 422-2735. No other degree programs are offered in this area.

## Scholarships and Awards

Graduate-level scholarships and awards are available to qualified students. Applications may be obtained from the Office of the Dean of Religious Education, 370 JSB.

## Religious Studies Center

THomas A. Wayment, Director
167 HGB
(801) 422-6975
http://rsc.byu.edu/

The Religious Studies Center (RSC) is the research and publication arm of Religious Education. It continues to pursue its original charter to encourage and sponsor serious, faithful, gospel-related scholarship and the ensuing publication of that scholarship. It fulfills the charge to help meet the university's commitment to religious studies and Religious Education's aim to teach and preserve the doctrine of the gospel of Jesus Christ. It also serves the greater Church through the publication of the works of Religious Education faculty and other scholars who have written important, timely, scholarly work of a faith-promoting nature.

To encourage and promote religiously oriented scholarship, the RSC awards grants and provides other financial assistance. It proactively reaches out to faculty to encourage research in specific areas and supports them in the publication of their findings. To

accomplish this the RSC sponsors two faculty mentors, known as area directors, who oversee and fund research in Church history and ancient scripture.

## Undergraduate Courses

Asterisk (*) denotes core courses.

### 100-Level Courses

*REL A 121 : The Book of Mormon. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Narrative, doctrines, and precepts of the Book of Mormon. Covers 1 Nephi through Alma 29.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Book of Mormon narrative or story.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Book of Mormon's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the Book of Mormon bears witness of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected Book of Mormon passages can be applied to daily living.

*REL A 122 : The Book of Mormon. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Narrative, doctrines, and precepts of the Book of Mormon. Covers Alma 30 through Moroni 10.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of --the Book of Mormon narrative or story.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Book of Mormon's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Book of Mormon bears witness of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Book of Mormon passages can be applied to daily living.

### 200-Level Courses

*REL A 211 : The New Testament. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Historical background, narrative, and doctrines of the New Testament. Covers the life and teachings of Jesus Christ set forth in the four Gospels.

**Course Outcomes**

**Course Outcomes**

: History of the English Bible. (2:2:0)

**Course Outcomes**

## 400-Level Courses

REL C 431 : Doctrines of the Gospel. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Doctrines of The Church of Jesus Christ of Latter-day Saints as taught in the scriptures and by latter-day prophets. Intended as a capstone experience to integrate doctrines and principles of the plan of salvation.

NOTE: Honors also.

**Course Outcomes**

- · Students will identify, understand, clarify, and explain core doctrines contained in the Standard Works of the Church of Jesus Christ of Latter-day Saints and taught by LDS prophets.

- · Students will discern whether their life choices are in harmony with the doctrines they understand
- · Students will explain how various aspects and principles of the plan of salvation work to bring to pass the immortality and eternal life of God's children

: Honors Doctrines of the Gospel.

**Course Outcomes**

REL C 471 : Teaching Seminary. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: An introduction to effective seminary teaching, includes discussion related to professional seminary expectations, teaching techniques, classroom management and direct experience in teaching seminary.

NOTE: For prospective seminary teachers only.

**Course Outcomes**

There are no course outcomes available

REL C 472 : Teaching the Developmentally Disabled. (2:2:0)

PREREQUISITE: Instructor's consent.

DESCRIPTION: Training prospective Church Educational System teachers to effectively teach religious education to youth who are developmentally disabled.

**Course Outcomes**

- · Students will identify, understand, and respond to developmentally disabled seminary students
- Students will demonstrate in a classroom environment strategies for teaching the developmentally disabled.

REL C 475 : Seminary Teaching Seminar. (.5-2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Topics pertinent to success of newly appointed seminary teachers preparatory to fall teaching.

**Course Outcomes**

- Students will demonstrate teaching competence through a student teaching experience in a seminary classroom
- Students will demonstrate an ability to employ basic seminary teaching strategies in classroom presentations.

# Undergraduate Education

2006 JKB
(801) 422-3037
Email: ugrad@byu.edu
Website: http://ue.byu.edu

**Dean:** John D. Bell, Professor, Physiology and Developmental Biology
**Associate Dean:** Deborah Dean, Professor, English
**Associate Dean:** Paul Kerry, Associate Professor, History
**Associate Dean:** Joseph Parry; Professor; Humanities, Classics, and Comparative Literature
**Assistant Dean:** Heather Hammond
**Assistant Dean:** Phil Rash, Associate Clinical Professor, Counseling and Career Center
**Assistant Dean:** Carolyn Tuitupou

The Office of Undergraduate Education supervises and fosters essential university-wide elements of the baccalaureate: General Education, Honors Program, First-Year Experience, and Freshman Mentoring. These interrelated programs together promote and champion teaching and learning within an integrated *university* education. They aim to enrich the educational experience and to benefit the life of each undergraduate student.

## General Education

302 MSRB
(801) 422-6818
Email: gened@byu.edu
Website: http://ge.byu.edu

The General Education (GE) components of the University Core are overseen by the Associate Dean of Undergraduate Education—General Education. The Faculty General Education Council (FGEC), consisting of faculty members from a variety of disciplines and chaired by the associate dean, regularly reviews general education courses and has final authority to decide which courses meet GE requirements.

GE requirements are set forth in the University Core section of this catalog. Beyond this and the more detailed listing in the current class schedule, the recommended source of information and advice about GE requirements is the individual college advisement center. The college advisement centers, together with the University Advisement Center (2500 WSC), provide assistance with registration, graduation requirements, policies and procedures, fields of study, changes of major, appeals, and many other aspects of academic life. The General Education Office (302 MSRB) regularly consults with each advisement center on issues related to GE.

In an ongoing effort to strengthen the GE offerings in the University Core, General Education offers matching grants for GE course development and enhancement. General education courses are taught by faculty from throughout the university, and General Education works closely with the colleges in a collaborative effort to foster a strong and engaging GE offering within the University Core.

## Honors Program

102A MSRB
(801) 422-5497
Email: honors@byu.edu
Website: http://honors.byu.edu

The University Honors Program is open to all capable, motivated undergraduate students who wish to broaden their education through interdisciplinary study and deepen it by producing original research in their home discipline. Especially welcome are students who seek both knowledge and wisdom, who want to use their intellect to build their faith and their faith to strengthen their intellect, and who bring a sense of curiosity, humility, and courage to their education. The breadth and depth of an Honors education develops leaadership qualities and encourages the integration of faith, intellect, and character. The central focus of the program is the study of big or "great" questions (e.g., justice, human agency and responsibility). Coursework teaches and models for students modes of intellectual inquiry that draw on the knowledge and skills of different disciplines, that are open to discovering "unexpected connections" between those disciplines, and that lead to a deeper, more careful and precise understanding of the questions we seek to answer (and have sought to answer for millenia). "University Honors" is a distinction awarded to any graduate of BYU who has met the Honors requirements; see the Honors Program section of this catalog for details. It will be recorded on the student's university diploma, on the official transcript of grades, and in the graduation program.

## First-Year Experience

2006 JKB
(801) 422-4243
Email: fye@byu.edu

Website: http://fye.byu.edu

The Office of First-Year Experience (FYE) facilitates new students' transition to university life. This includes helping new students 1) make connections with peers and university personnel, 2) become acquainted with campus resources, and 3) improve their sense of purpose and motivation by increasing their understanding of BYU's unique mission and history. These efforts span the time between students' admission notification through the end of their first year on campus. Some of the FYE activities that help students transition to university life include Jumpstart (course registration orientation), New Student Orientation, Freshman Seminar (UNIV 101), and the First-Year Arts Card program.

Course (Univ)

UNIV 101 : Freshman Seminar. (.5-2:Arr:Arr)

DESCRIPTION: Aims of a BYU education in a disciplinary context. Topics vary by section and semester.

**Course Outcomes**

There are no course outcomes available

## Freshman Mentoring

2014 JKB
(801) 422-8176 or 1-877-890-5451
Email: freshmanmentoring@byu.edu
Website: freshmanmentoring.byu.edu

The Freshman Mentoring program is a key part of a university-wide initiative to strengthen undergraduate education at BYU. It gives all first-year students easier access to high demand University Core (General Education plus Religious Education) classes and provides every freshman with strong peer mentor support. Beginning Summer Term or Fall Semester 2010, all incoming freshmen will participate in the two-semester Mentoring program, which guarantees

- Reserved seating in one or more high-demand, University Core mentored courses, both fall and winter semesters
- Access to a Freshman Mentoring peer mentor whose principal task is to have individual conversations with students about the successes and challenges of their first year at BYU and to encourage, support, and model habits that contribute to academic success
- Connections with other students who share the same mentored classes
- Progress toward fulfillment of foundational University Core requirements

Freshman students starting at BYU during the summer will have the additional advantage of a mentored summer term experience and selection of a general education class from a slate of options. They will then select one or more Freshman Mentoring envelope courses for the fall and winter semesters.

For more information about the Freshman Mentoring program and expectations for students to engage with their peer mentor, please visit http://freshmanmentoring.byu.edu.

## National Scholarships, Fellowships, and Programs

102B MSRB
(801) 422-6137
Email: prestigious_scholarships@byu.edu
Website: www.byu.edu/scholarships

The National Scholarships, Fellowships, and Programs office assists students in finding and applying for national externally funded scholarships and fellowships for undergraduate and graduate study (e.g., Rhodes, Marshall, Gates, Fulbright, Goldwater, Truman, National Science Foundation Graduate Research Fellowship, etc.) and scholarships for research opportunities, summer programs, and study abroad. Students are encouraged to review the online information describing each scholarship at www.byu.edu/scholarships. For more information contact Carolyn Tuitupou in 102B MSRB or e-mail prestigious_scholarships@byu.edu.

# Honors Program

350 MSRB
(801) 422-5497
Email: honors@byu.edu
Website: http://honors.byu.edu

**Honors Program Director:** Joseph D. Parry; Professor; Humanities, Classics, and Comparative Literature
**Honors Program Administrator:** Julie C. Radle
**Honors Program Advisement Manager:** Shauna Barrick

## Participation in Honors

The Honors Program provides a rich and challenging experience for capable and motivated undergraduate students. Its purpose is to broaden and deepen the educational experience of students, to develop the intellectual integrity and moral character that define disciple-scholarship. An Honors education is not merely a more intensive general education or a more strenuous program in a major. Rather, it grounds students in broader interdisciplinary inquiry that strengthens leadership and encourages the integration of faith, intellect, and character.

The Honors Program is comprised of three dimensions: Great Questions, Experiential Learning, and the Honors Thesis. The central focus of the program is the study of big or "great" questions. Through coursework, research, writing, and hands-on experiences, students explore interdisciplinary approaches and consider ways in which "unexpected connections" not only can be found between different disciplines, but also can lead to a deeper understanding of the questions we seek to answer. The Honors Program invites students to satisfy university core requirements through the Honors Interdisciplinary Core where they can begin to consider the questions that drive our inquiry, and indeed, lie behind every bit of knowledge we study and learn.

"University Honors" is a distinction awarded to all graduates of BYU who have met the Honors requirements as described below. This prestigious designation is recorded on the university diploma, on the official transcript of grades, and in the graduation program. It is widely recognized as an indication of exceptional academic achievement. Although it is hoped that students will choose to complete all of the requirements for the University Honors designation, those who do not intend to do so are welcome to participate in the Honors Program to whatever extent they choose. All students are invited to consider Honors as a way to achieve the quality academic experiences they seek. Students may register for Honors courses at any time during their undergraduate years without necessarily intending to complete all the Honors graduation requirements.

There are no special admissions criteria for participation in the Honors Program, and all students are invited to consider Honors as a way to broaden and deepen their educational experience at BYU. However, it takes careful planning to complete all program requirements. Typically, interested first-year students begin by completing an enrollment form that may be obtained from the Honors Advisement Center in 350D MSRB after a brief orientation. Then during their second year, students formally commit to the program and, with the help of the advisement center, begin to construct a more concrete plan for graduation with University Honors. Reasonable accommodations can be made for transfer students who wish to join the program. Any student at the university is welcome to take Honors courses that suit their interests and educational objectives.

## Facilities and Opportunities Available to Honors Students

The Honors Program is housed in the historic Maeser Building on the southwest part of campus. This quiet corner is surrounded by beautiful grounds and wooded areas. The building is named after Karl G. Maeser, the first principal of Brigham Young Academy (the school that later became Brigham Young University). A bronze statue of Karl G. Maeser stands at the building's east entrance. Constructed in 1911, the Maeser Building is the oldest building on the current campus. The building was restored in 1985 with modern electrical and ventilation systems but retains its historic architecture and decoration, its marble halls richly decorated with oak and brass trim.

Facilities for honors students in the Maeser Building include the Honors Reading Room in 150 MSRB, with study tables and a small library of reference works and classics; the Honors Student Lounge in 102 MSRB, where students can meet for informal discussions; an art gallery in the lower-floor hall; the Honors Advisement Center in 350D MSRB, where students receive counseling about their honors education; and the Martha Jane Knowlton Coray Lecture Hall in 321 MSRB, where classes, lectures, and musical concerts are held. Another Honors Reading Room is located in 3770 Harold B. Lee Library.

The Honors Program sponsors lectures, concerts, symposia, socials, and a Late Summer Honors program. It also offers competetive scholarships. Students can participate in intercampus events with Honors students from other universities and colleges, and are invited to participate with the Honors Student Advisory Council, a group of student representatives who assist in policy development, social activities, and academic functions of the Honors Program. Honors students are recognized during University graduation exercises at the Honors Graduation luncheon, and in the graduation program.

## Who Should Participate in Honors?

Any student who wishes to broaden their education through interdisciplinary study and deepen it by producing original research in their home discipline should consider participating in the Honors Program. Especially welcome are students who seek both knowledge and wisdom, who want to use their intellect to build their faith, and their faith to strenthen their intellect, and who bring a sense of curiosity, humility, and courage to their education. The most successful Honors students see learning as a way of being, not as an instrument to a credential or a job. They do not worry if the program requirements will be too hard; rather, they see their BYU experience as a time to continually avail themselves of the rich and diverse offerings on campus of concerts, plays, films,

lectures, art, science exhibitions, and athletic events. And they enjoy and benefit from pursuing all of these things in a community of senior (faculty) and junior (student) scholars.

## Overview of Requirements for Graduation with University Honors

This section provides a brief overview of the requirements to graduate with University Honors. Detailed explanations of each requirement follow this section. The staff in the Honors Advisement Center, 350D MSRB, (801) 422-5497, is available on a walk-in basis to answer questions about the program. To graduate with University Honors, a student must:

1. Complete an honors enrollment form.
2. Complete the honors commitment interview.
3. Complete the honors curriculum.
4. Complete the honors great questions essay.
5. Complete the honors experiential learning requirement.
6. Complete the senior graduation review.
7. Complete the honors thesis requirement.
8. Submit a graduation portfolio.

The requirements for graduation with University Honors complement both major and university core education. The Honors curriculum includes and enhances the university core components; the Honors thesis requirement enhances the major education component.

## Detailed Explanations of Requirements for Graduation with University Honors

1. **Honors Enrollment Meeting**

   Students who wish to explore the Honors Program should attend a brief group enrollment meeting as early as possible in their undergraduate program. Consultation with the Honors Advisement Center allows the Honors Program personnel to be aware of students' plans to better assist with registration, help develop plans toward graduation, and consult on other Honors program requirements. The enrollment process is the door to a community of well-rounded, enthusiastic scholars and to all of the activities and programs the Honors Program offers.

2. **Honors Commitment Interview**

   Students who intend to graduate with University Honors will submit a letter of intent in preparation for an interview usually held during the student's third or fourth semester at BYU. Accommodations can be made for transfer students and students joining late. Newly committed students will be recognized at the Fall Honors Opening Evening.

3. **Honors Curriculum Requirement**

   The central focus of the Honors curriculum is the study of big or "great" questions (e.g., justice, human agency, relationships, ethics). Courses are designed to model different disciplinary approaches to Great Questions, to explore interdisciplinary approaches, and to consider ways in which "unexpected connections" can be found between disciplines, leading to a deeper understanding of the questions we seek to answer.

   To fulfill the Honors curriculum requirements, students must complete 14-17 credit hours as follows:

   a. HONRS 120 (2 credits): Introduction to Great Questions
   b. UNIV 291, 292, and 293 (3 credits each): The Honors Interdisciplinary Core, comprised of three Unexpected Connections courses. Each course will simultaneously fill Honors core curriculum requirements and the GE requirements in two designated disciplines.
   c. HONRS 320 (3 credits): Great Questions Tutorial. See additional information below.
   d. HONRS 390 (3 credits): Experiential Learning. See additional information below.

4. **Honors Great Questions Requirement**

   The capstone to the Honors coursework (HONRS 320) will provide group and individual instruction in researching and writing the Great Question essay, a multi-disciplinary essay on an approved question of the student's choosing. Students are expected to incorporate three different and sufficiently disparate disciplinary areas into the essay, usually including the student's home discipline. This essay is not a second honors thesis; it is fundamentally different in that it broadens where the honors thesis tends to narrow a topic.

   By "Great Questions" we mean the big questions every discipline at the university addresses in some way and no one discipline can fully answer. Some of these are old, frequently posed questions for which the answer has proven maddeningly elusive (e.g., the question of justice, of human agency and freedom, of our relationships with and obligations toward each other, other forms of life, and the physical world in which we live). Others have emerged more recently, often provoked by new discoveries and developments in technology (e.g., questions of medical ethics, use of natural resources including very powerful ones like nuclear energy, etc.). Students will explore various aspects of their question, including implications, stakes and context, as they consider ways of thinking and reasoning from various perspectives to better understand their topic.

5. **Honors Experiential Learning Requirement**

   Typically during their 2nd or 3rd year at the university, Honors students will participate in an approved, substantive, "hands-on" experience that augments their BYU education and expands learning to the world outside the classroom. To fill the Experiential Learning requirement (HONRS 390), students may serve as an Honors Peer Mentor in HONRS 120 or as a teaching assistant in a UNIV course, participate in an approved international study or internship experience, or participate in an education-related service initiative.

6. **Senior Graduation Review**

   Progress on the thesis and other graduation requirements will be reviewed during the senior interview with an Honors advisor.

7. **Honors Thesis Requirement**

   The Honors thesis requirement gives students the opportunity to participate in original research or creative work in the discipline of their major. Honors students typically complete the thesis requirement during their junior and senior years after they have obtained sufficient training in their major to conduct research in a specialized academic field. Generally stated, each student consults with the Department Honors Coordinator to choose a faculty advisor in the department of his or her major and, in consultation with the advisor, chooses a thesis topic. But this process can work differently in different fields. For instance, a student who works in a faculty member's lab can work with that faculty member to identify a portion or an expansion of the research being conducted that could become the student's thesis. Another student may fulfill major requirements with a capstone paper or project that could also serve as or become her Honors thesis. Yet another student produces his thesis from an academic or a creative project he first proposed to a faculty member to win an ORCA grant.

   Students should complete significant course work within the subject area of the thesis (usually at least 30 credit hours, several of which are from 300- or 400-level major courses). The thesis is intended to acquaint students firsthand and in depth with the type of scholarly work that characterizes the field they intend to pursue professionally. For these reasons, only under rare circumstances is an Honors thesis topic outside the major area approved. (In most cases students who complete a thesis outside the major do so in fields cognate to their majors.)

   Before students begin work on an Honors thesis, they attend an Honors Program thesis orientation then approach the Department Honors Coordinator to assemble a thesis committee consisting of the student, faculty advisor, and a faculty second reader. Each member of the committee signs a thesis contract that specifies the student's chosen topic and direction. Second, students submit to the Honors Program Office a formal written thesis proposal that has been approved by all members of the thesis committee and that is now ready for final approval from the Honors Program Office. Guidelines for writing the proposal are available in the Honors Advisement Center (350D MSRB) or electronically at http://honors.byu.edu. Students can request financial support as a part of the thesis proposal. Many Honors students obtain competitive undergraduate research grants from BYU's Office of Research and Creative Activities for Honors thesis work. Also, many professors and departments have research funding that can be devoted to research on an Honors thesis. Personnel in the Honors Program can help students explore the various opportunities available to support their work on an Honors thesis.

   After completing thesis research and writing the thesis, each student must schedule and complete a thesis defense. The defense committee consists of the thesis advisor, a faculty referee, and a representative of the Honors Program administration. After the thesis defense is completed and all final changes are incorporated into the thesis, the Honors Program will have the thesis bound and add it to the collection of Honors theses housed in the Harold B. Lee Library Honors Reading Room (3770 HBLL).

8. **Graduation Portfolio Summarizing the Honors Experiences**

   The Honors portfolio is a record of a student's culminating experiences in each of the three dimensions of the Honors Program. It is submitted for review when the final thesis draft is due and contains:

   a. The Great Question essay
   b. A reflective summary of the student's experiential learning experience
   c. The Honors thesis

**Note:** Courses marked with * simultaneously meet two General Education (GE) requirements. For more information on General Education and Religion requirements go to the University Core.

1. **Citizenship**

*Global and Cultural Awareness*

UNIV 292 : Unexpected Connections: Physical Science and Culture. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: WRTG 150; or PHIL 150; or ENGL 115; or ELang 150.

DESCRIPTION: The class, team-taught by professors from different disciplines, explores unities between physical science and culture. Through reading, writing, and conversation, students gain understanding and skills to engage real-life questions. Topics are announced in the class schedule.

**Course Outcomes**

There are no course outcomes available

2. **Arts, Letters, and Sciences**

*Arts*

UNIV 293 : Unexpected Connections: Social Science and Art. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: WRTG 150; or PHIL 150; or ENGL 115; or ELang 150.

DESCRIPTION: The class, team-taught by professors from different disciplines, explores the unities between social science and art. Through reading, writing, and conversation, students gain understanding and skills to engage real-life questions. Topics are announced in the class schedule.

**Course Outcomes**

There are no course outcomes available

*Letters*

UNIV 291 : Unexpected Connections: Biology and Letters. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: WRTG 150; or PHIL 150; or ENGL 115; or ELang 150.

DESCRIPTION: The class, team-taught by professors from different disciplines, explores unities between biology and letters. Through reading, writing, and conversation, students gain understanding and skills to engage in real-life questions. Topics are announced in the class schedule.

**Course Outcomes**

There are no course outcomes available

*Scientific Principles and Reasoning*

UNIV 291 : Unexpected Connections: Biology and Letters. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: WRTG 150; or PHIL 150; or ENGL 115; or ELang 150.

DESCRIPTION: The class, team-taught by professors from different disciplines, explores unities between biology and letters. Through reading, writing, and conversation, students gain understanding and skills to engage in real-life questions. Topics are announced in the class schedule.

**Course Outcomes**

There are no course outcomes available

UNIV 292 : Unexpected Connections: Physical Science and Culture. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: WRTG 150; or PHIL 150; or ENGL 115; or ELang 150.

DESCRIPTION: The class, team-taught by professors from different disciplines, explores unities between physical science and culture. Through reading, writing, and conversation, students gain understanding and skills to engage real-life questions. Topics are announced in the class schedule.

**Course Outcomes**

There are no course outcomes available

UNIV 293 : Unexpected Connections: Social Science and Art. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: WRTG 150; or PHIL 150; or ENGL 115; or ELang 150.

DESCRIPTION: The class, team-taught by professors from different disciplines, explores the unities between social science and art. Through reading, writing, and conversation, students gain understanding and skills to engage real-life questions. Topics are announced in the class schedule.

HONRS 100R : Honors Topics. (.5-2:Arr:Arr)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Introductory seminar for incoming honors students.

**Course Outcomes**
There are no course outcomes available

HONRS 101 : Late Summer Honors. (1:1:1)
WHEN TAUGHT: Fall
DESCRIPTION: One week introductory seminar for incoming freshmen.

**Course Outcomes**
There are no course outcomes available

HONRS 120 : Introduction to Honors: Great Questions. (2:2:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Introduction to Honors curriculum, especially the study of big ("Great") questions. The course models different disciplinary approaches to Great Questions (guest lectures), and concludes by briefly exploring interdisciplinary approaches (preparation for UNIV 291, 292, 293).

**Course Outcomes**
There are no course outcomes available

HONRS 292R : Honors Seminar. (1-3:ARR:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Weekly presentation by faculty and invited guests on various research topics. Students will complete one Great Works response.

**Course Outcomes**
There are no course outcomes available

HONRS 301R : Teaching Writing: Writing Fellows. (1-3:ARR:ARR)

**Course Outcomes**
No outcomes are available at this time.

HONRS 320 : Great Questions Tutorial. (3:Arr:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: HONRS 120; or HONRS 292R
RECOMMENDED: Wrtg 150.
DESCRIPTION: This capstone to the Honors Program coursework provides group and individual instruction in researching and writing the Great Question Essay, a multi-disciplinary essay on an approved "big question" of the student's choosing.

**Course Outcomes**
There are no course outcomes available

HONRS 390R : Honors Experiential Learning. (.5-3:Arr:Arr)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: HONRS 120
DESCRIPTION: Facilitates substantive experience that augments Honors education through approved BYU international program or internship, Honors peer mentoring, or education-related service. Increases understanding by applying, teaching, expanding, and reflecting on knowledge and skills acquired at BYU.

**Course Outcomes**

There are no course outcomes available

HONRS 391R : Honors Student Advisory Council. (1-3:Arr:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Course for students elected to the Honors Student Advisory Council. Credit granted for work organizing honors events. Gives leadership and service experiences.

**Course Outcomes**

There are no course outcomes available

HONRS 395R : Special Topics. (1-3:Arr:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

DESCRIPTION: For upper-level students on approved special topics supervised under the Honors Program. Topics vary.

**Course Outcomes**

There are no course outcomes available

HONRS 398 : Honors Thesis Proposal. (1-3:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Writing the Honors Thesis Proposal in preparation for writing the Honors Thesis. Students find a thesis chair, have initial contact with them, and complete a proposal leading to completing the Honors thesis.

NOTE: This course should be taken preferably during the sophomore or junior year.

**Course Outcomes**

There are no course outcomes available

HONRS 499R : Honors Thesis. (.5-6:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Student will demonstrate application of his/her Honors Thesis project to his/her personal religious beliefs and to solving real-life problems.
- Student will incorporate critical thinking skills in analytically approaching a discipline-specific question.
- Student will apply course credits towards completion of graduating from BYU with Honors recognition.
- Student will utilize advanced research and writing skills on an approved Honors Thesis project.

- Departmental Sections of Honors Courses

# Departmental Sections of Honors Courses

Show All Course Descriptions
Hide All Course Descriptions

Selected departments offer designated honors sections of introductory courses that meet particular university core requirements as well as departmental requirements. Credit for departmental honors sections does not apply to Honors Program requirements. Dates and times are listed in the current class schedule, and courses are designated by the word *honors* in the title. Departmental honors courses include:

A HTG 100 : Honors American Heritage (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Synthesis of American constitutional and economic principles, and patterns of historical development.

**Course Outcomes**

- Understand the religious, historical, political and economic origins of the Constitution
- Learn how the Constitution works;
- Apply their knowledge of the Constitution to analyze major historical, political and economic issues
- Become better informed, more active citizens

ANTHR 110 : Honors Introduction to Archaeology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Studying past human behaviors and cultures by applying scientific principles and reasoning; exploring case studies concerning archaeological discoveries.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- This course should help students to demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process. Students will learn to appreciate the excitement of discovery that has accompanied important scientific developments as well as demonstrate how scientific methodology can be used to analyze real-world science-related problems. Students will become adept at evaluating scientific data and claims in order to make rational decisions on public-policy science issues that affect their community. As students complete the course they will learn to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data, as well as reflect rationally upon the interface between science and religion.

ARTHC 111 : Honors Introduction to Art History. (3:3:0)

OFFERED: Honors also.

DESCRIPTION: Topical approach to art history and appreciation.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

BIO 100 : Honors Principles of Biology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Introductory course for general education students.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

CHEM 111 : Honors Principles of Chemistry. (4:3:3)

OFFERED: Honors also.

WHEN TAUGHT: Fall

PREREQUISITE: Math 110 or equivalent.

RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.

DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.

NOTE: Tutorial included.

**Course Outcomes**

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

CL CV 110 : Honors Introduction to Greek and Roman Literature. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Homer's *Iliad*, Sophocles' *Oedipus the King*, Vergil's *Aeneid*, and other important works of the Greeks and Romans.
NOTE: All readings in English. Honors also.

**Course Outcomes**

There are no course outcomes available

CL CV 201 : Honors Classical Tradition 1: Antiquity to Renaissance. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall
DESCRIPTION: Civilization from Greek and Roman antiquity to the Italian Renaissance, emphasizing Greco-Roman culture--its institutions, literature, arts, and ideas.

**Course Outcomes**

There are no course outcomes available

CL CV 202 : Honors Classical Tradition 2: Reformation to Modern. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Winter
DESCRIPTION: Civilization from the Reformation to the twentieth century, emphasizing the heritage of Greco-Roman culture--its institutions, literature, arts, and ideas.

**Course Outcomes**

No outcomes are available at this time.

CL CV 241 : Honors Greek and Roman Mythology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Greek and Roman gods, heroes, and myths, emphasizing literature but also giving attention to representations in the visual arts.

**Course Outcomes**

There are no course outcomes available

CMLIT 201 : Honors Civilization: Literature 1. (3:3:0)

OFFERED: Honors also.
DESCRIPTION: Western civilization from antiquity to early Italian Renaissance, emphasizing socioeconomic, political, intellectual, and aesthetic developments, with primary focus on literary texts.

**Course Outcomes**

There are no course outcomes available

CMLIT 202 : Honors Civilization: Literature 2. (3:3:0)

OFFERED: Honors also.
DESCRIPTION: Western civilization from Europe's high Renaissance to the present, emphasizing socioeconomic, political, intellectual, and aesthetic developments, with primary focus on literary texts.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

DANCE 260 : Honors Introduction to Dance. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Critical analysis of dance as a cultural and expressive art form, studied through lecture, reading, research, multimedia presentations, and practical movement experiences.
NOTE: No previous dance experience required. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

ECON 110 : Honors Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

ENGL 201 : Honors Masterpieces of World Literature 1. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Spring Contact Department; Summer Contact Department

DESCRIPTION: Major world civilizations from antiquity through the early Italian Renaissance, approached through literature and emphasizing socioeconomic, religious, political, intellectual, and aesthetic developments.

**Course Outcomes**

There are no course outcomes available

ENGL 202 : Honors Masterpieces of World Literature 2. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Major world civilizations from Europe's High Renaissance to modern times, approached through literature and emphasizing socioeconomic, religious, political, intellectual, and aesthetic developments.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

ENGL 311 : Honors Writing About the Arts and Humanities. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Writing for both academic and mass audiences about the functions, meanings, values, and qualities of art and the humanities. Library research paper.

NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including creating and/or finding ideas, evidence, and data to write about; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Write and speak effectively about the arts to academic and general audiences and for a variety of purposes.
- Critically read and evaluate different artistic mediums as well as scholarship in the humanities.

ENGL 312 : Honors Persuasive Writing. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Expository and persuasive writing focusing on practical reasons for evaluating audiences, generating and structuring an argument, and making stylistic decisions. Library research paper.

NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including creating and/or finding ideas, evidence, and data to write about; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness,

and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Create an appropriate ethos in both writing and speaking.
- Analyze the parts of an argument; evaluate them in terms of the intended audience; and generate a reasonable argument for a specific audience.Anticipate and effectively respond to audience objections and counterarguments.

ENGL 315 : Honors Writing in the Social Sciences. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Writing characteristic of disciplines that inquire into human behavior and institutions; correspondence, proposals, library paper, empirical research, and reviews.
NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to specific rhetorical situations.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Successfully complete the library tour, tutorial, and tests (if not completed as part of the first-year writing requirement). Successfully complete a library mini-course taught for their major area and demonstrate the ability to use the library effectively.
- Demonstrate the ability to create, number, and label tables and figures.
- Effectively evaluate and comment on the writing of others to facilitate revision.

ENGL 316 : Honors Technical Communication. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.
NOTE: Carries GE Advanced Written and Oral Communication credit.

**Course Outcomes**

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

EXSC 349 : Honors Body, Mind, Spirit. (3:3:0)

OFFERED: Independent Study only. Honors also.
DESCRIPTION: Sacredness of the body and its meaningfulness to the whole being. Comparative approach utilizing ideas from the restored gospel and Western and Eastern philosophy (nature of being).

**Course Outcomes**

There are no course outcomes available

FREN 202 : Honors Intermediate French, Part 2. (3:3:1)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Fren 201 or equivalent.
DESCRIPTION: Final course for GE Languages of Learning requirement (except for full-time French speaking returned missionaries); extensive reading in French literature and culture.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Read beyond basic plot and learn to apply tools of literary analysis.
- Recognize and analyze key genres in French literature.
- Identify and define key characteristics of the important French literary movements.
- Place literature in a meaningful cultural and historical context.
- Improve your reading and writing skills in French.
- Broaden and deepen your perception and appreciation of French culture.

GEOG 120 : Honors Geography and World Affairs. (3:3:0)

OFFERED: Honors also. Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Survey of the world, stressing geography of major political regions.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOL 101 : Honors Introduction to Geology. (3:2:1)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Summer
DESCRIPTION: Cultural focus on physical and environmental geology for nonscience majors; rocks and minerals. Field trips.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- 1. Understand the difference between minerals and rocks.2. Be able to identify common rocks and minerals.3. Know where and when the basic rock and mineral types form and how they are related to the hydrologic and tectonic systems.
- 1. Understand how the hydrologic system helps to shape the Earth and how the different sub-systems interact.2. Learn the reasons for climate change in both ancient and modern times.
- 1. Learn the basic evidences and ideas that support the Theory of Plate Tectonics.2. Understand how the plate tectonic system works, including the role of the different types of plate boundaries and the forces that help to drive the system.3. Learn how the plate tectonic system has helped to shape the Earth's surface.
- 1. Gain a greater insight into the enormous length of geologic time and the evidences that support this claim.2. Learn the different ways that scientists can determine geologic ages.
- Learn how and why the other planets and moons in our solar system are different from Earth.

GERM 330 : Honors Cultural History of German-Speaking Peoples. (3:3:1.5)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Germ 202 or equivalent experience.
DESCRIPTION: Culture, with listening, speaking, reading, writing, and grammar as secondary emphases. Includes International Cinema.
NOTE: Entry course for returned missionaries or others with equivalent German language experience. Required course for obtaining language credit by examination (Germ 101, 102, 201, 311R). Prerequisite to all 400-level courses. Culminating course for Languages of Learning requirement.

**Course Outcomes**

There are no course outcomes available

GERM 340 : Honors: Writing About Literature. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall
DESCRIPTION: Methods of literary interpretation. Reading, writing, and research skills integral to the literary analysis expected in German major or minor courses.
NOTE: Fills GE Advanced Written and Oral Communication requirement.

**Course Outcomes**

There are no course outcomes available

GERM 343 : Honors: Introduction to Literary Analysis. (3:3:.5)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter
RECOMMENDED: Germ 302, 303, 330, 340.
DESCRIPTION: Close reading of texts; examining various critical theories and their application to German prose, drama, poetry, and film. Preparation for 440R - 445R sequence. Includes International Cinema.

**Course Outcomes**

There are no course outcomes available

HEB 133 : Honors Hebrew and the Old Testament. (4:4:0)

WHEN TAUGHT: Fall
PREREQUISITE: Must be taken in conjunction with specified Honors section of Rel A 301.
DESCRIPTION: Rapid survey of biblical Hebrew.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Recite the Hebrew alphabet and recognize the vowels;2. Analyze and discuss most of the fundamental elements of Hebrew grammar;3. Read and translate elemental biblical historical narrative texts with limited use of a lexicon;4. Analyze and parse the verbal system: Pa'al (Qal);5. Define approximately 315 vocabulary words.

HEB 134 : Honors Hebrew and the Old Testament. (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: Must be taken in conjunction with specified Honors section of Rel A 302.

DESCRIPTION: Rapid survey of biblical Hebrew.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Analyze and discuss the fundamental elements of Hebrew grammar.2. Read and translate elemental biblical historical narrative texts with limited use of a lexicon.3. Analyze and parse the verbal system: pa'al, niphal, piel, pual, hiphil, hophal, hithpael.4. Define approximately 400 vocabulary words.

HIST 201 : Honors World Civilization to 1500. (3:3:0)

OFFERED: Honors also. Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: World civilization from Greek antiquity to Renaissance; explores fundamental questions in the human experience, examines formative events in history, and seeks to teach value of important texts.

**Course Outcomes**

- Demonstrate a basic geographical knowledge of the world, and more importantly, develop the ability to discuss how geographical and environmental realities, as well as cross-regional interactions, have impacted historical development
- Be able to identify major societies of the pre-1500 C.E. era and make historical comparisons between them, in regard to political systems, trade and economics, social structures, religious beliefs, and gender roles
- Gain an appreciation of influential cultural works produced in a variety of pre-modern societies and through them come to a clearer understanding of the fundamental values held by past peoples—including, how they understood the natural world, what it meant to be human, and their relationship with the divine.
- Be able to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions
- Be able to read, analyze, and discuss both primary and secondary source documents dealing with world history (pre-1500 C.E.).
- Improve the clarity and grace of analytical writing.
- Recognize and be able to apply the tools necessary for a lifelong appreciation of the study of world history.

HIST 202 : Honors World Civilization from 1500. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: World civilization from Renaissance to present; explores fundamental questions in the human experience, examines formative events in history, and seeks to teach value of important texts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Demonstrate a basic geographical knowledge of the world, and more importantly, develop the ability to discuss how geographical and environmental realities, as well as cross-regional interactions, have impacted historical development.
- Be able to identify major societies of the post-1500 C.E. era and make historical comparisons between them, in regard to political systems, trade and economics, social structures, religious beliefs, and gender roles.
- Gain an appreciation of influential cultural works produced in a variety of modern societies and through them come to a clearer understanding of the fundamental values held by past peoples—including, how they understood the natural world, what it meant to be human, and their relationship with the divine.
- Be able to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions.
- Be able to read, analyze, and discuss both primary and secondary source documents dealing with world history (post-1500 C.E.).
- Improve the clarity and grace of analytical writing.
- Recognize and be able to apply the tools necessary for a lifelong appreciation of the study of world history.

IHUM 201 : Honors Western Humanities 1: Antiquity to Renaissance. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Western civilization from Greek antiquity to Renaissance from perspective of traditional humanistic values reflected in its arts and ideas. Examines fundamental questions about human experience, formative events in history, and value of important literary and artistic texts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

IHUM 202 : Honors Western Humanities 2: Renaissance to the Present. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Western civilization from Renaissance to present from perspective of traditional humanistic values reflected in its arts

and ideas. Examines fundamental questions about human experience, formative events in history, and value of important literary and artistic texts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

IHUM 261 : Honors American Humanities 1: Colonial Era Through 1876. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Value systems reflected in the arts and ideas of the United States from the colonial era to 1876.

**Course Outcomes**

There are no course outcomes available

IHUM 262 : Honors American Humanities 2: 1877 to the Present. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Value systems reflected in the arts and ideas of the United States from 1877 to the present.

**Course Outcomes**

There are no course outcomes available

LATIN 111 : Honors Beginning Latin Accelerated. (5:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Equivalent of combined Latin 101, 102.

NOTE: Prepares students for Latin 201.

**Course Outcomes**

There are no course outcomes available

MATH 112 : Honors Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

MATH 113 : Honors Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

M COM 320 : Honors Communication in Organizational Settings. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.

DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.

NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

**Course Outcomes**

- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

MMBIO 221 : Honors General Microbiology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

**Course Outcomes**

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MUSIC 101 : Honors Introduction to Music. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Nonmusic major status.
DESCRIPTION: Designed to aid nonmusic majors in developing skills needed for listening to music creatively. Emphasis on masterworks of Western music from major style periods.

**Course Outcomes**

- By listening to music, learning about the historical development of music, learning about its composers, participating in in-class discussions, attending concerts, and by acquiring a vocabulary and knowledge of music terms and concepts, students will be capable of identifying practically any piece of classical music by time period and genre. Students will also possess a much greater understanding of musical forms, genres and styles.

MUSIC 201 : Honors Civilization: Music 1. (3:3:0)

OFFERED: Honors also
WHEN TAUGHT: Fall; Spring Contact Department; Summer Contact Department
PREREQUISITE: Ability to read musical notation.
DESCRIPTION: History of civilization from Greek antiquity through the seventeenth century, primarily from perspective of musical literature and the arts; exploring fundamental questions in human experience; examining formative events in history; understanding value of important texts.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Demonstrate foundational knowledge and skills in the methods of investigating, expressing, and evaluating concepts in the Arts, with a focus on music, from Ancient Greece to ca. 1720.
- Communicate effectively through writing with diverse audiences about music, culture and the arts from Ancient Greece to ca. 1720.
- Identify and describe the major cultural ideas and styles from the Western cultural tradition from Ancient Greece to ca. 1720.
- Demonstrate the skills and abilities needed for a life-long critical and evaluative pursuit of art, literature, music, and philosophy

MUSIC 202 : Honors Civilization: Music 2. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Winter Contact Department; Spring Contact Department; Summer Contact Department
PREREQUISITE: Ability to read musical notation.
DESCRIPTION: History of civilization from the eighteenth century through the present day, primarily from perspective of musical literature and the arts; exploring fundamental questions in human experience, examining formative events in history; understanding value of important texts.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Demonstrate foundational knowledge and skills in the methods of investigating, expressing, and evaluating concepts in the Arts, with a focus on music, from ca. 1720 to the present day.
- Communicate effectively through writing with diverse audiences about music, culture and the arts from ca. 1720 to the present day.
- Identify and describe the major cultural ideas and styles from the Western cultural tradition from ca. 1720 to the present day.
- Demonstrate the skills and abilities needed for a life-long critical and evaluative pursuit of art, literature, music, and philosophy

PDBIO 120 : Honors Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

**Course Outcomes**

There are no course outcomes available

PHIL 110 : Honors Introduction to Philosophy. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Articulating, assessing, and defending fundamental positions on topics such as reason, knowledge, science, education, ethics, politics, and religion.

**Course Outcomes**

- Become acquainted with important figures, topics, and issues in the history of philosophy.
- Learn to read and discuss critically philosophical texts.
- Write a clear and cogent philosophical essay.
- Learn to integrate philosophical skills and practices with religious convictions, while cultivating a respect for contrary points of view.

PHIL 150 : Honors Reasoning and Writing. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Recommended for philosophy majors and minors.

DESCRIPTION: Informal grammar, logic, and rhetoric as tools for reading and writing. Library research.

NOTE: Fulfills GE First-Year Writing requirement. No course challenges accepted.

**Course Outcomes**

There are no course outcomes available

PHIL 201 : Honors History of Philosophy 1. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Western civilization from Greek antiquity to Renaissance, primarily from perspective of philosophy; exploring fundamental questions in human experience; examining formative events in history; understanding value of important texts.

**Course Outcomes**

- Know milestones of Western history and culture from antiquity through the Renaissance and Reformation.
- Acquire a basic understanding of the most important philosophical figures, texts, and issues in ancient, medieval, and early modern philosophy.
- Write a clear and cogent philosophical essay.

PHIL 202 : Honors History of Philosophy 2. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Western civilization from Renaissance to present, primarily from perspective of philosophy; exploring fundamental questions in human experience; examining formative events in history; understanding value of important texts.

**Course Outcomes**

- Know milestones of Western history and culture from the Renaissance and Reformation through the present.
- Acquire a basic understanding of the most important philosophical figures, texts, and issues in late modern and contemporary philosophy.
- Write a clear and cogent philosophical essay.

PHIL 210 : Honors Science and Civilization 1. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall

DESCRIPTION: History of Civilization from Greek antiquity to scientific revolution; methods in early science and their philosophical significance; exploring fundamental questions in human experience; examining formative events in history; understanding value of important texts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Know about the development of scientific ideas and practices in their cultural context, including the major figures and methods of science from antiquity to 1500.
- Read, analyze, and critically summarize a book-length study of science.
- Learn to integrate philosophical skills and practices with religious convictions, while cultivating a respect for contrary points of view.

PHIL 211 : Honors Science and Civilization 2. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Winter
DESCRIPTION: History of Civilization from scientific revolution to present; concepts and methods in modern science and their philosophical significance; exploring fundamental questions in human experience; examining formative events in history; understanding value of important texts.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

PHIL 300 : Honors Philosophical Writing. (3:3:0)

OFFERED: Honors also
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Phil 201 and Phil 202 and Phil 205.
DESCRIPTION: Writing philosophical papers about philosophical texts or problems. Research methods in philosophy. Library research paper.
NOTE: Fulfills GE Advanced Written and Oral Communications requirement. No course challenges accepted.

**Course Outcomes**

- Learn advanced strategies of writing clearly on a well-defined topic using correct grammar, accepted usage, and stylistic conventions appropriate to philosophy; refine the ability to write using a voice, tone, and level of formality suited to one's intended audience.
- Cultivate advanced critical reading and writing skills used in summarizing, paraphrasing, formulating, analyzing and evaluating philosophical arguments, and in prewriting, drafting, revising, critiquing, editing, and proofreading philosophical essays.
- Refine the ability to use scholarly research tools (including library and internet resources) in writing expository, persuasive, and philosophical essays, and to use and cite researched material.

PHY S 100 : Honors Physical Science. (3:3:ARR)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Conceptual lectures and demonstrations of the most significant and universal laws and models describing the physical world by faculty from the Physics and Astronomy, Chemistry and Biochemistry, and Geology departments.
NOTE: Satisfies GE Physical Science requirement.

**Course Outcomes**

- Students will be able to recognize and apply the fundamental principles presented in this course to simple physical situations.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to explain how scientific observations led to the development of these few principles and the models built on them.
- Students will be able to explain how these principles and models in turn lead to further scientific questions.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public policy issues that affect their community.

PHSCS 127 : Honors Descriptive Astronomy. (3:3:1)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Nonmathematical presentation of knowledge of the content and history of the cosmos, frequently using observatory and planetarium.

**Course Outcomes**

There are no course outcomes available

POLI 110 : Honors American Government and Politics. (3:3:0)

OFFERED: Honors also. Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
DESCRIPTION: Origin and development of federal Constitution; national, state, and local governments and politics.

**Course Outcomes**

There are no course outcomes available

POLI 150 : Honors Comparative Government and Politics. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
DESCRIPTION: Patterns of European, Asian, Latin American, and other political systems.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 201 : Honors Western Political Heritage 1. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Western civilization from Greek antiquity to Renaissance, primarily from perspective of political philosophy and scriptures; exploring fundamental questions in human experience; examining formative events in history; understanding value of important texts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 202 : Honors Western Political Heritage 2. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Western civilization from Renaissance to present, primarily from perspective of political philosophy; exploring fundamental questions in human experience; examining formative events in history; understanding value of important texts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

PSYCH 111 : Honors Introduction to Psychological Science. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Basic course in modern scientific psychology.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Objective: Apply psychological principles to personal and social issues and problems.Measurement:Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper.
- Objective: Demonstrate a broad knowledge of the basic theoretical perspectives that guide psychological inquiry.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Pyychology 111 sections.
- Objective: Understand the basic research methods used in psychology, including classical and current experiments.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper, participation as a subject in actual psychological research.

SFL 160 : Honors: Introduction to Family Processes. (3:3:0)

OFFERED: Honors also; Independent Study also.

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Ways of strengthening family life by understanding such family processes as generations, emotions, communication, and rituals.

**Course Outcomes**

- Critically examine the main theoretical frameworks used in the family sciences.Demonstrate understanding of basic terms, concepts, and ideas used to describe family systems.Apply family systems ideas and concepts to your own family (past and future) in order to learn how they might improve your own family well-being.
- Identify and discuss how researchers uniquely study families and family systems.

SOC 111 : Honors Introductory Sociology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Social group influence; social interaction, processes, organization, and change; family, religion, government, population, culture, race relations.

**Course Outcomes**

There are no course outcomes available

SOC 112 : Honors Current Social Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Individual deviance (violence, insanity, drugs, sex, crime, etc.) and social disorganization (poverty, race and sex discrimination, divorce, overpopulation, etc.). Conditions, causes, solutions.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

STAT 121 : Honors Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

**Course Outcomes**

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

WRTG 150 : Honors Writing and Rhetoric. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Processes of writing, reading, and research with an emphasis on argumentation and rhetorical analysis.

NOTE: Fulfills General Education First-Year Writing requirement.

**Course Outcomes**

- Use rhetoric responsibly to compose arguments in a variety of genres for specific audiences and purposes.
- Critically read texts. This includesanalyzing how a text functions in a specific situation, community, or public;analyzing the nuances of language (diction, figures of speech, tone, etc.);identifying and evaluating the elements of an argument—claims, reasons, assumptions, and ethical, emotional, and logical appeals.
- Write coherent and unified texts (effective introductions, clear theses, supporting details, transitions, and strong conclusions) using a flexible and effective writing process, including prewriting, drafting, revising, and editing.
- Use style—diction, figurative language, tone, grammar, punctuation, spelling, mechanics—genre, conventions, and document design correctly and for rhetorical effect.
- Navigate the library to locate primary and secondary sources, evaluate the appropriateness and credibility of those sources, and effectively incorporate and accurately document outside sources in a research paper.

Religious Education:

REL A 121 : Honors The Book of Mormon. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Narrative, doctrines, and precepts of the Book of Mormon. Covers 1 Nephi through Alma 29.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Book of Mormon narrative or story.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Book of Mormon's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the Book of Mormon bears witness of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected Book of Mormon passages can be applied to daily living.

REL A 122 : Honors The Book of Mormon. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Narrative, doctrines, and precepts of the Book of Mormon. Covers Alma 30 through Moroni 10.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of --the Book of Mormon narrative or story.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Book of Mormon's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Book of Mormon bears witness of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Book of Mormon passages can be applied to daily living.

REL A 211 : Honors: The New Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Historical background, narrative, and doctrines of the New Testament. Covers the life and teachings of Jesus Christ set forth in the four Gospels.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

REL A 212 : Honors: The New Testament. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Historical background, narrative, and doctrines of the New Testament. Covers the Acts of the Apostles through the Revelation of John.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

REL A 301 : Honors: The Old Testament. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
DESCRIPTION: Historical background, narrative, and doctrines of the Old Testament. Covers Genesis through 2 Samuel.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

REL A 302 : Honors: The Old Testament. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
DESCRIPTION: Historical background, narrative, and doctrines of the Old Testament. Covers 1 Kings through Malachi.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

REL A 304 : Honors: Writings of Isaiah. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
DESCRIPTION: Teachings and prophecies of Isaiah in light of their historical context and relevance to latter-day people.

**Course Outcomes**

There are no course outcomes available

REL A 327 : Honors: The Pearl of Great Price. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Historical background and doctrines of the Pearl of Great Price.

**Course Outcomes**

There are no course outcomes available

REL A 392R : Honors: Special Studies in Religion: Ancient Scripture. (.5-3:ARR:0)

OFFERED: Honors also

WHEN TAUGHT: Contact Department.
DESCRIPTION: Topical studies in religion based on student interest and teacher expertise.

**Course Outcomes**

- Students will demonstrably learn relevant doctrine, principles and/or history of a specific aspect

REL C 130 : Honors Missionary Preparation. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Focuses upon the purpose, skills, and doctrines of missionary work and prepares prospective missionaries for a more meaningful MTC and mission experience.
NOTE: Recommended for all prospective missionaries. This class may not be taken or retaken by returned missionaries or non-LDS students.

**Course Outcomes**

There are no course outcomes available

REL C 234 : Honors: LDS Marriage and Family. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: LDS doctrines and principles of marriage and family.

**Course Outcomes**

- Students will learn and identify specific LDS doctrines and principles of successful marriage and family relationships.
- Students will accurately express LDS doctrines and principles of successful marriage and family relationships.
- Students will find and act on prophetic teachings regarding LDS expectations for marriage and family relationships.
- Students will discover and apply doctrines, instruction, and counsel given to Latter-Day Saints concerning marriage and family relationships.
- Students will remember and discuss LDS doctrines and teachings concerning the family.
- Students will discern between LDS principles of marriage and family and other views.

REL C 261 : Honors Introduction to Family History (Genealogy). (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Introduction to the doctrinal significance, necessary skills, and available resources dealing with family history and genealogy.

**Course Outcomes**

There are no course outcomes available

REL C 324 : Honors: The Doctrine and Covenants. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Origin, content, and teachings of the Doctrine and Covenants. Covers Sections 1 through 76.

**Course Outcomes**

- Students will learn the origin, content, and teachings of Doctrine and Covenants sections 1-76
- Students will demonstrably analyze the relevant revelation texts
- Students will demonstrably remember the teachings of the relevant revelation texts
- Students will understand and identify what the relevant revelation texts meant to their original recipients
- Students will apply the relevant revelation texts to personal and present situations

REL C 325 : Honors: The Doctrine and Covenants. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Origin, content, and teachings of the Doctrine and Covenants. Covers Sections 77 through Official Declaration 2.

**Course Outcomes**

- Students will learn the origin, content, and teachings of Doctrine and Covenants sections 77 through Official Declaration 2
- Students will demonstrably analyze the relevant revelation texts
- Students will demonstrably remember the teachings of the relevant revelation texts
- Students will understand and identify what the relevant revelation texts meant to their original recipients
- Students will apply the relevant revelation texts to personal and present situations

REL C 333 : Honors: The Living Prophets. (2:2:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Doctrines, administration, backgrounds, and current teachings of the living prophets, seers, and revelators.

**Course Outcomes**

- Students will accurately identify specific LDS doctrines, organization, government, and perspectives related to current members of the First Presidency and Quorum of Twelve Apostles
- Students will accurately articulate LDS doctrines and perspectives related to current members of the First Presidency and Quorum of Twelve Apostles
- Students will demonstrably identify, gather, and analyze biographical information of current members of the First Presidency and Quorum of Twelve Apostles
- Students will find and report on teachings of current members of the First Presidency and Quorum of Twelve Apostles
- Students will demonstrably discern the doctrines, instruction, and counsel of current members of the First Presidency and Quorum of Twelve Apostles

REL C 341 : Honors Joseph Smith and the Restoration, 1805-1845. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Life and ministry of the Prophet Joseph Smith, coming forth of the Book of Mormon, organization of the church, foundational revelations, building the Kirtland Temple, Missouri persecutions, establishment of Nauvoo, and events leading to the Martyrdom.

**Course Outcomes**

There are no course outcomes available

REL C 342 : Honors Pioneers and Persecution, 1846-1899. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Exodus from Nauvoo, the experience of Mormon Pioneers crossing the plains, establishing Zion in the Great Basin, plural marriage and government persecution, the Manifesto, and events leading to Utah statehood.

**Course Outcomes**

There are no course outcomes available

REL C 343 : Honors The Global Church, 1900 to the Present. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: The Church in the twentieth and twenty-first centuries, international expansion, significant developments of Church programs and structure, the Church during wartime, the world-wide spread of temples.

**Course Outcomes**

There are no course outcomes available

REL C 344 : Honors Latter-day Saint History: The International Church. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Church history and doctrine from 1830 to the present in Britain, Europe, the Pacific, Asia, Latin America, Africa, the Near East, and other areas.

**Course Outcomes**

- Students will learn the history of how the Church of Jesus Christ of Latter-day Saints, has expanded globally and been influenced by global developments
- Students will demonstrably remember and analyze events and developments of the global aspects of LDS history
- Students will demonstrably remember participants in global LDS history and analyze their contributions.
- Students will demonstrably remember the geography of global LDS history
- Students will gain experience with the historical record of global LDS history
- Students will relate global LDS history to larger historical contexts and patterns
- Students will examine and explain change over time and causes and effects as they relate to global LDS history

REL C 393R : Honors: Special Studies in Religion: Church History and Doctrine. (.5-3:ARR:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Topical studies in religion based on student interest and teacher expertise.

**Course Outcomes**

- · Students will demonstrably learn relevant doctrine, principles and/or history of a specific aspect of the restored gospel topics based on student interest and instructor expertise

REL C 431 : Honors Doctrines of the Gospel. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Doctrines of The Church of Jesus Christ of Latter-day Saints as taught in the scriptures and by latter-day prophets. Intended as a capstone experience to integrate doctrines and principles of the plan of salvation.

NOTE: Honors also.

**Course Outcomes**

- · Students will identify, understand, clarify, and explain core doctrines contained in the Standard Works of the Church of Jesus Christ of Latter-day Saints and taught by LDS prophets.
- · Students will discern whether their life choices are in harmony with the doctrines they understand
- · Students will explain how various aspects and principles of the plan of salvation work to bring to pass the immortality and eternal life of God's children

Students should consult the departmental listings in this catalog and the current class schedule for further details about these courses.

## International and Area Studies Program Coordinators

African Studies, Chantal Thompson
Ancient Near Eastern Studies, Eric Huntsman
Asian Studies, Eric A. Hyer
European Studies, Nick Mason
International Development, Tim Heaton
International Relations, Ken Stiles
Latin American Studies, Christopher Lund
Middle East Studies / Arabic, James A. Toronto

## Admission to Degree Programs

All undergraduate international and area studies degree programs are open enrollment.

## Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

## Undergraduate Programs and Degrees

Majors

BA in Ancient Near Eastern Studies

**History and Culture of Ancient Near East**
Know and be able to interpret the significant events and developments in the history and cultures of the ancient Near East, including the history and culture of ancient Israel in its Near Eastern context.

**Ancient Text Interpretation**
Be able to interpret major ancient Near East texts, including the Bible, and analyze their significance for understanding the cultures in which they were produced.

**Language Proficiency**
Acquire and demonstrate functional capacity in the languages and textual interpretation of the Hebrew Bible and/or Greek New Testament, being able to read, comprehend, analyze, and interpret these significant religious and historical texts with methodological soundness.

**Critical Thinking**
Develop the capacity for informed, independent, critical thinking and be able to perform appropriate library and online research utilized in the professional study of the ancient Near East.

**Analytical Writing**
Be able to write concise as well as more substantial research papers that utilize approaches from the Social Sciences and Humanities and that integrate language and interpretive skills to analyze ancient Near Eastern topics.

**Academic Integrity**
Have considered and received affirmation concerning the significance of integrity in their academic and professional pursuits.

**Academics and Faith**
Have considered and received affirmation concerning the relationship between academics and faith, and will have been encouraged to engage in a spiritually informed, lifelong pursuit of learning, scholarship, and service.

BA in Asian Studies
Emphases:
China Studies

**Factual Knowledge**
Demonstrate general factual knowledge of the literature, humanities, history, politics, economics, geography, and social conditions of East Asia.

**Language Proficiency**
Communicate in an Asian language (e.g. Chinese, Japanese or Korean) at the "intermediate" level

**Middle and Near Eastern Studies**

**Majors**

- BA in Ancient Near Eastern Studies
- BA in Middle East Studies/Arabic

**Minors**

**Research Philosophies and Methodologies**
Understanding basic research philosophies and methodologies associated with research in the social science and humanities.

**Research Philosophies and Methodologies**
Understanding basic research philosophies and methodologies associated with research in the social science and humanities.

BA in European Studies

No learning outcomes were found for this program.

BA in International Relations

**Factual Knowledge**
Demonstrate factual knowledge of important international trends and events related to politics, economics, geography and history.

**Factual Knowledge**
Demonstrate factual knowledge of important international trends and events related to politics, economics, geography and history

**Analyzing International Affairs**
Anaylze international affairs by utilizing theoretical concepts and ideas from more than one IR-related discipline.

**Analyzing International Affairs**
Anaylze international affairs by utilizing theoretical concepts and ideas from more than one IR-related discipline.

**Analyzing International Affairs**
Anaylze international affairs by utilizing theoretical concepts and ideas from more than one IR-related discipline

**Writing Effectively**
Communicate effectively in writing and in speech.

**Writing Effectively**
Communicate effectively in writing and in speech

**Critical and Analytical Thinking**
Think critically and analytically about international problems and events, and synthesize concepts, information and experiences from different disciplines relevant to international affairs.

**Critical and Analytical Thinking**
Think critically and analytically about international problems and events, and synthesize concepts, information and experiences from different disciplines relevant to international affairs

**Analysis and Research**
Employ appropriate methods of analysis and research, both qualitative and quantitative, to provide sophisticated analyses and clear, logical arguments relating to important questions about international relations.

**Analysis and Research**
Employ appropriate methods of analysis and research, both qualitative and quantitative, to provide sophisticated analyses and clear, logical arguments relating to important questions about international relations

**Language Proficiency**
Communicate at an intermediate level in a foreign language (to the equivalent of 321).

**Language Proficiency**
Communicate at an intermediate level in a foreign language (to the equivalent of 321).

**Academic Honesty and Integrity**
Bring honesty and integrity to their daily lives, public affairs, and professional activities.

**Academic Honesty and Integrity**
Bring honesty and integrity to their daily lives, public affairs, and professional activities

**Religious Principles**
Apply religious principles and faith to the analysis of international affairs.

**Religious Principles**
Apply religious principles and faith to the analysis of international affairs

**Life-long Learning**
Gain a strong desire and prepare themselves to pursue a life of continued learning, to participate effectively in international affairs and to serve international communities and organizations.

**Life-long Learning**
Gain a strong desire and prepare themselves to pursue a life of continued learning, to participate effectively in international affairs and to serve international communities and organizations

BA in Latin American Studies

No learning outcomes were found for this program.

BA in Middle East Studies / Arabic

**Succinct Analytical Writing**
Write succinct analytical briefing papers on Middle Eastern events or topics in which they situate the event or topic in its broader context (geographical, political, religious, historical, etc.)

**Succinct Analytical Writing**
Write succinct analytical briefing papers on Middle Eastern events or topics in which studens situate the event or topic in its broader context (geographical, political, religious, historical, etc.)

**Succinct Analytical Writing**
Write succinct analytical briefing papers on Middle Eastern events or topics in which they situate the event or topic in its broader context (geographical, political, religious, historical, etc.)

**Substantive Research Papers**
Write substantive research papers which integrate extensive background knowledge and personal experience in the Middle East

**Oral Presentation**
Explain and analyze Middle Eastern events or topics in a significant oral presentation.

**Oral Presentation**
Explain and analyze Middle Eastern events or topics in a significant oral presentation.

**Library / Internet Research**
Perform skilled library and internet research on Middle Eastern topics

**Speaking Proficiency**
Speak an Arabic dialect at the ACTFL Advanced Level, demonstrating an ability to negotiate both survival and basic professional situations

**Speaking Proficiency**
Speak an Arabic dialect at the ACTFL Advanced Level, demonstrating an ability to negotiate both survival and basic professional situations

**Reading Proficiency**
Read and understand Arabic newspapers fluently, specifically front page, international page and Arab World page news articles, without the use of a dictionary or other aids.

**Arabic Research Sources**
Research using Arabic sources.

**Gospel principles of respect**
Applies gospel principles of appreciation and respect for cultural and religious differences and similarities.

**Gospel principles of respect**
Applies gospel principles of appreciation and respect for cultural and religious differences and similarities.

**Cultural Proficiency**
Exhibit understanding of Middle Eastern culture, humanities, geography, history, politics and religion while working in the Middle East for an extended period of time.

**Cultural Proficiency**
Exhibit understanding of Middle Eastern culture, humanities, geography, history, politics and religion while working in the Middle East for an extended period of time.

Minors

- African Studies
- Ancient Near Eastern Studies
- Asian Studies
- European Studies
- International Development
- Latin American Studies
- Middle East Studies

Students should see the International and Area Studies Advisement Center for help or information concerning the undergraduate programs.

# General Information

## International Study Programs

International Study Programs (ISP) are open to students from all university majors. Students need not be formally admitted to BYU to participate in International Study and BYU credit may be transferred to their home institution.

**Study Abroad:** BYU's traditional off-campus study programs. In these programs students are able to further their general education; pursue specialized courses in languages, the social sciences, humanities, fine arts, and other fields; gain valuable insights into their own country; and further international understanding.

**Direct Enrollment:** Students are integrated into an international university, taught by faculty native to that county, and are not accompanied by BYU faculty.

**International Internships:** Short-term, on-the-job apprentice training abroad under the direction of a firm, government agency, NGO, or other such institution.

**Field Studies:** A research experience abroad for small numbers of students directed by faculty, who generally do not accompany the students.

For further information, see the Office of International Study Programs in the David M. Kennedy Center, 101 HRCB, isp@byu.edu, and (801) 422-3686.

## Undergraduate Courses

### 100-Level Courses

IAS 100 : Introduction to International Studies. (1:1:0)
DESCRIPTION: Academic expectations in the major and career orientation; review of campus resources; faculty presentations.

**Course Outcomes**
There are no course outcomes available

IAS 199R : Academic Internship: International. (.5-3:ARR:ARR)
DESCRIPTION: Nonsupervised undergraduate foreign internship.

**Course Outcomes**
There are no course outcomes available

### 200-Level Courses

IAS 201R : Cultural Survey. (.5-4:2:2)
PREREQUISITE: Performing group or ISP participant status.
DESCRIPTION: Multidisciplinary survey of various countries and regions in preparation for extended experience abroad.

**Course Outcomes**

- · Demonstrate a basic understanding of the people, worldview, culture (and language, where applicable) of the foreign setting in which the student studies.· Recognize one's cultural presuppositions and biases through exposure to, and study of, foreign perspectives on one's own culture.

: Cultural Survey-Europe.
**Course Outcomes**

: Cultural Survey-Asia.
**Course Outcomes**

: Cultural Survey-China.
**Course Outcomes**

: Cultural Survey-Middle East.
**Course Outcomes**

: Cultural Survey-USSR.
**Course Outcomes**

: Cultural Survey-Eastern Europe.
**Course Outcomes**

: Cultural Survey-Scandinavia.
**Course Outcomes**

: Cultural Survey-England.
**Course Outcomes**

: Cultural Survey-Africa.
**Course Outcomes**

: Cultural Survey-South Pacific.

**Course Outcomes**

: Cultural Survey: Japan.

**Course Outcomes**

IAS 220 : Introduction to Development Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Exploration of international development in non-formal education, micro-enterprises, community organizations; hunger, poverty, and other special problems in developing areas of the world.

**Course Outcomes**

- Upon successfully completing this course, a student will be able to recognize the historical origins of international development and the various agendas that it embodies. Upon successfully completing this course, a student will be able to recognize and articulate the complexity of international development issues and their interdisciplinary nature. Upon successfully completing this course, a student will be able to identify major theories and approaches to international development both in general and across different key disciplines. Upon successfully completing this course, a student will be intellectually ready to embark on an International Development Minor Internship.

### 300-Level Courses

IAS 301 : Kennedy Center Lecture Series. (1:1:0)

DESCRIPTION: Weekly lectures by national and international authorities on world affairs; designed as an introductory class for all David M. Kennedy Center majors.

**Course Outcomes**

There are no course outcomes available

IAS 351R : Model United Nations Preparation. (.5-3:ARR:0)

DESCRIPTION: Preparation for participating in MUN projects, on campus, in public schools, and at the United Nations in New York.

**Course Outcomes**

- • Understand the framework for multilateral diplomacy -Students will demonstrate understanding of the process and politics of international organizations • Explore the rationale for diplomacy - Students will understand how international law informs diplomacy and relates to international organization. • Improve public speaking ability - Students will improve oratory ability by learning and demonstrating elements of effective public speaking. • Improve policy writing ability - Students will demonstrate the ability to write policy papers and resolutions with regular feedback and various opportunities individually, in small groups and in large simulations. • Improve research ability - Students will demonstrate effective research skills while learning about country policies and international topics in greater depth. • Develop parliamentary procedure skills - Students will learn and effectively use beginning and intermediate parliamentary procedure in group settings. • Expand leadership capacity - Students will explore the dynamics of leadership, including motivation, decision making, and group dynamics and will begin to demonstrate leadership abilities, especially in simulations/case study/small group activities.

IAS 353R : Intercultural Outreach Preparation. (1-3:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Developing abilities to prepare and share international understanding in public and private schools.

**Course Outcomes**

- Activelyreflect on your own cultural values, practices, and traditions and develop an articulated sense of respect for themStudy, understand, and negotiate the central role cultural values—your own and others'—play in all human interactionsDevelop a personal framework for effective intercultural participationProbe commonly held views of culture and intercultural competenceDevelop a pedagogical approach for fostering transformative cultural contact situations and for creating "third zones", as negotiated and productive areas of intercultural workCreate written and oral forms of intercultural outreachBecome an active agent for intercultural responsibility and competence

IAS 354R : Model Arab League Preparation. (.5-3:Arr:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Understanding Middle Eastern governments and foreign policies. Preparation and attendance at the Model Arab League Conference.

**Course Outcomes**

There are no course outcomes available

IAS 360R : International Field Study Preparation. (.5-9:ARR:0)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Cross-cultural field research and survival with a regional emphasis and application.

NOTE: For students preparing for International Field Studies and Internships or Study Abroad programs.

**Course Outcomes**

- 1. Improve your ability to ask analytical and insightful questions as relates to your experience and express yourself more clearly in writing.2. Develop cross-cultural skills for entering and navigating a new culture and developing new meaningful relationships with people from often very different backgrounds than you.3. Further develop a working knowledge of field methods and project design, and develop a clearly written and implementable plan for your field study.4. Develop a basic understanding of research ethics and the IRB process.5. Collaborate and learn from others in the BYU Field Studies community.6. Create realistic expectations of yourself and your academic experience abroad.

IAS 361 : Post-Fieldwork Analysis and Writing. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: IAS 360R

DESCRIPTION: Writing course designed to help students write a quality research paper

NOTE: Only for those students who have participated in an International Study Programs Field Study Program.

**Course Outcomes**

- Rhetorical Knowledge – Students will demonstrate that they can write clearly, focus on a well-defined purpose in writing, use conventions of format and structure appropriate to their discipline, and adopt a voice, tone, and level of formality suited to multiple purposes and audiences, including audiences both within and outside the discipline in which the course is offered.Writing Processes – Students will develop productive and flexible individual and collaborative writing processes, including prewriting, drafting, revising, editing and proofreading. These processes could include the following: collecting data, finding supporting evidence, and creating good arguments; organizing the material for a paper; writing successive drafts of the same paper; group writing; seeking and using peer responses; editing grammar, usage and punctuation; and using conventional formats. These processes will reflect processes of inquiry within the student's discipline.Processes of Disciplinary Research – Students will demonstrate the ability to use appropriate research tools and processes of research within their particular discipline, including library research. Students will demonstrate their ability to identify and evaluate sources, retrieve and evaluate data, take notes, and follow conventions of quoting, paraphrasing, and summarizing. They will cite sources properly and demonstrate an understanding of ethical issues related to research, including how to avoid plagiarism.

IAS 369R : International Internship Preparation. (1-3:0:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Orientation on cross-cultural communication, globalization, interfacing with internship providers, culture shock, international safety/health, and BYU policies abroad.

NOTE: For students preparing to participate in an internship, field practicum, or experiential learning experience abroad.

**Course Outcomes**

There are no course outcomes available

IAS 380R : Cultural Proofs. (1-3:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Independent research on cultural topics and intercultural communication.

NOTE: For students studying abroad.

**Course Outcomes**

- Gain knowledge from close observation of cultural traditions and practices
- Each student will develop in these areas through careful analysis of cultural traditions and practices and the production of field notes and a reflective written summary
- Through participation in the cultural proofs exercises, each student will become familiar with basic field study research skills and practices

IAS 397R : Topics in International and Area Studies. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Study relating to current world problems.

**Course Outcomes**

- Students will gain knowledge through advanced study in focused area of IAS
- The student will develop these skills by producing a well-reasoned and well-written research paper
- Develop techniques of advanced research appropriate to the study

:

**Course Outcomes**

IAS 399R : Academic Internship: International. (.5-9:ARR:ARR)

PREREQUISITE: Acceptance into program.

DESCRIPTION: Individualized work or volunteer experience in an international setting.

NOTE: Class must be coordinated through International Study Programs.

**Course Outcomes**

- · Apply skills and material learned in traditional courses to a real-world workplace environment.· Demonstrate proficiency in the skills required by the internship supervisor.· Demonstrate an ability to link insights gained from traditional classes and from real-world

workplace experiences.

**400-Level Courses**

IAS 421 : Seminar on Japanese Workplace: Society and Culture. (3:3:0)

WHEN TAUGHT: Fall; Summer
PREREQUISITE: Instructor's consent.
NOTE: Required seminar for interns in the Japan seminar and intern program held only in Japan.

**Course Outcomes**

No outcomes are available at this time.

IAS 491 : Directed Research for African Studies Minor. (3:2.5:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Enrollment in the African Studies minor.
DESCRIPTION: Directed research project (library and/or on-site experience) related to African studies or the African diaspora. Must be supervised by faculty with extensive in-field experience in Africa and African Studies.
NOTE: Students may adapt their research project to their individual major requirements with the approval of their major department.

# African Studies

## The Discipline

The African Studies minor is an interdisciplinary program focused on the study of Africa, primarily through the humanities and social sciences. With its various courses on history, geography, culture, literature and politics, the program deepens your understanding of a continent of increasing importance in global politics and world economy. It is an excellent minor for students interested in medicine, law, business, education, humanities, economics, or working with government agencies, NGOs, or international organizations.

# Minor in African Studies (15 hours*)

Show All Course Descriptions
Hide All Course Descriptions

## The Discipline

The African Studies minor is designed to complement several majors in preparing students interested in work related to the continent of Africa or the African Diaspora.

## Program Requirements

1. Complete three courses from the following:

ANTHR 330 : Peoples of Africa. (3:3:0)
WHEN TAUGHT: Winter Even Yrs.
DESCRIPTION: Political, economic, and social organization, family life, language, worldview, religion, ritual, artistic expression, ecological adaptation, and contemporary development issues among rural and urban sub-Saharan peoples.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

GEOG 285 : Africa South of the Sahara. (3:3:0)
WHEN TAUGHT: Winter Contact Department
DESCRIPTION: Geographical analysis focusing on resource management, political issues, development, environmental problems, economic development, and urban-rural change; case studies from selected countries.

**Course Outcomes**
There are no course outcomes available

HIST 261 : Modern Africa. (3:3:0)
WHEN TAUGHT: Fall Even Yrs.
DESCRIPTION: Survey of the history of the African continent from circa 1800, focusing on experiences and perspectives of Africans. Topics may include culture and identity, colonialism, independence movements, religion, gender relations, the environment, and economic development.

**Course Outcomes**
- Students will gain a greater knowledge of major events, developments, and questions in modern African history
- Students will develop a historical understanding of African societies, cultures, and peoples
- Students will improve their ability to weigh evidence, assess conflicting viewpoints, and evaluate arguments
- Students will improve their ability to write clearly and organize evidence to build an argument
- Students will gain a greater understanding of how Africa has related to the rest of the world

POLI 352 : African Politics. (3:3:0)
PREREQUISITE: Poli 200.
DESCRIPTION: Processes of change and development of nation states; African regionalism and relations with other nations; contemporary political issues.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

2. Complete one course from the following:

ENGL 358R : Ethnic Literatures. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: ENGL 251 & ENGL 295
DESCRIPTION: Study of literary texts representative of a thoughtfully focused dimension of a given ethnic group.

**Course Outcomes**
There are no course outcomes available

: Native American Literature.

**Course Outcomes**

: African American Literature.

**Course Outcomes**

: Asian American Literature.

**Course Outcomes**

: Jewish American Literature. (0::)

**Course Outcomes**

FREN 456R : Francophone Studies. (3:3:0)
PREREQUISITE: Fren 340.
DESCRIPTION: Readings from major French-speaking writers from countries outside France, such as Canada, Africa, and the Caribbean.

**Course Outcomes**

- Analyze and compare the cultures and practices that create African Francophone identities.
- Analyze and interpret literary texts of the French-speaking world.

3. Complete the following:

IAS 491 : Directed Research for African Studies Minor. (3:2.5:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Enrollment in the African Studies minor.
DESCRIPTION: Directed research project (library and/or on-site experience) related to African studies or the African diaspora. Must be supervised by faculty with extensive in-field experience in Africa and African Studies.
NOTE: Students may adapt their research project to their individual major requirements with the approval of their major department.

**Course Outcomes**
No outcomes are available at this time.

# Asian Studies

## The Discipline

The Asian Studies major is an interdisciplinary program designed to prepare students for careers and advanced study in the specialized field of Asia not provided by a major in one department. In the program, students acquire working competence in Chinese, Japanese, Korean, or another approved Asian language; a broad knowledge of Asian civilization; and a more specialized knowledge in an academic discipline.

## Career Opportunities

The Asian Studies major is useful to those contemplating careers in academic areas, private industry, or government service. The import-export field and international services are particularly interested in persons who have a strong background in Asian Studies.

**Middle and Near Eastern Studies**

**Majors**

- BA in Ancient Near Eastern Studies
- BA in Middle East Studies/Arabic

**Minors**

- Ancient Near Eastern Studies
- Middle East Studies

**Course Information**

- Ancient Near Eastern Studies (ANES) Courses
- Middle East Studies/Arabic (MESA) Courses

**International and Area Studies Programs Home**

## Program Requirements | View MAP

1. Courses cannot be double counted between the different requirement sections in the major.
2. There is a strong expectation that majors will do work in Asia via Study Abroad, internships, etc.
3. Complete the following core courses:

ASIAN 200 : Introduction to Asian Studies: Methods and Materials. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Sources, materials, and methods of research and writing; critical analysis of research project.
NOTE: Required of all Asian Studies majors early in the program.

**Course Outcomes**
- The student can identify countries and major geographic features of Asia on a map. The student can relate basic facts about the history, economics, politics, society and cultures of the countries of Asia.
- The student will be able to apply effective search strategies to locate and to evaluate information on Asia in all formats (print, electronic, microform, video, DVD) and of all types (books, articles, reference materials, etc.). The student will be able to employ proper research skills to carry out research on a topic related to Asia and present results in oral and written academic reports.

ASIAN 342 : Asian Literary Traditions. (3:3:0)
DESCRIPTION: Comparative analysis of Asian literary works spanning several traditions.

**Course Outcomes**
- Apply basic concepts of comparative literary analysis to course texts.
- Gain familiarity with Asian literary traditions, particularly India, China, and Japan.
- Demonstrate strong critical reading, writing, and analytical skills across linguistic and national traditions.

HIST 231 : Introduction to East Asian History. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Major themes in the history, thought, and culture of Asian societies from antiquity to the present.

**Course Outcomes**
- Students will be able to explain and analyze the major political, economic, and social developments in the history of China, Korea, and Japan from antiquity to the present
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meaning and significance of historical events on contemporary identity and foreign relations.
- Students will be able to analyze historical arguments.

IHUM 240 : Introduction to the Humanities of Asia. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Major arts of Asian cultures in their historical, religious, and philosophical settings.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

4. Complete one course from the following:

POLI 348 : Government and Politics of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**
There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

5. Complete the following core course:

ASIAN 495 : Senior Seminar. (1:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Senior status or program coordinator's consent.

DESCRIPTION: Learning research and writing skills necessary to prepare and present major senior research paper.

NOTE: Most all major requirements should be completed before registering for this course.

**Course Outcomes**

- In this course, you will learn how to complete a significant research project using appropriate methods of research, analysis, and a professional standard of writing. In doing so, you will draw heavily from your knowledge from previous courses.
- You will do this by studying a specialized topic in Asian Studies under the guidance of a professor. Thus, you will deepen your familiarity with a sub-field within Asian Studies and Asian Studies more broadly.
- You will also learn how to present your findings in a high-quality oral presentation, and how to give and receive appropriate feedback within a community of scholars.

6. Complete the following history core courses (history core courses cannot be double counted as electives):

HIST 340 : Traditional China. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: From a loose federation of Neolithic societies, Chinese civilization emerges as East Asia's dominant political and cultural force; developments to ca. 1500.

**Course Outcomes**

- Students will be able to explain and analyze the major social, political, economic, intellectual and cultural developments in the history of Early China (ca. 5000 BC–220 AD
- Students will demonstrate a basic geographical knowledge of China, including significant geological features and major historical cities Moreover, they will be able to discuss how geographical and environmental realities have impacted historical development.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve.

HIST 341 : China Since 1200. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Economic and political foundations of modernity during high Imperial China; challenge of new order from the West; rise of Chinese nationalism, revolution, and development to the present.

**Course Outcomes**

There are no course outcomes available

7. Complete the required courses for the Language Certificate in Chinese and take the OPI and WPT assessments. These assessments must be done on the BYU campus, and must be completed before graduation. See http://languagecertificate.byu.edu/program-requirements for complete details. Complete the following:

CHIN 302 : Third-Year Mandarin (4:5:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Chin 301.

DESCRIPTION: Advanced-level Mandarin skills, especially media discourse and reading.

**Course Outcomes**

- Understand the main points of spoken Chinese on television and radio news broadcasts at the ACTFL advanced mid level. (See Chinese major learning outcome 1)
- Read journalistic texts at the ACTFL advanced mid level, demonstrating the ability to both skim and scan texts as well as read for details. (See Chinese major learning outcome 2)
- Summarize news stories, express personal insights, and write and translate descriptive reports in formal written Chinese at the ACTFL intermediate mid level and in spoken Chinese at the advanced low level. (See Chinese major learning outcome 2)
- Understand the structure of Chinese media discourse, including grammar and stylistics, within the Chinese cultural context. (See Chinese major learning outcome 3)

CHIN 345R : Chinese Culture. (3:3:0)

WHEN TAUGHT: Fall
DESCRIPTION: Selected topics in traditional, modern, and contemporary Chinese culture.

**Course Outcomes**

- Demonstrate cultural literacy of the foundations of Chinese civilization: geography, history, philosophy, thought, political systems and social structures (see Chinese major expected learning outcome 3).
- Explain how cultural factors and institutions have shaped and continue to shape allied disciplines in Chinese studies including language, literature, linguistics, and the visual arts (see Chinese major expected learning outcome 3).
- Write coherently and cohesively in English.

CHIN 343 : Chinese Literature in Translation--Poetry. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: All readings in English; topics vary.

**Course Outcomes**

- Outline the basic facts of early Chinese poetry: authors, genres, titles (see Chinese major expected learning outcome 3).
- Utilize the basic approaches to analyzing and appreciating literature (see Chinese major expected learning outcome 3).
- Write clear, convincing prose, and understand the basics of proper formatting and documentation for scholarly prose.

**Or**:
CHIN 344 : Chinese Literature in Translation--Prose. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: All readings in English; topics vary.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Acquire and apply knowledge of literary terminology and frameworks for literary analysis (see Chinese major expected learning outcome 3).
- Analyze and discuss classical and modern Chinese narrative literature and its relations to Chinese cultural traditions (see Chinese major expected learning outcome 3).
- Write coherently and cohesively in English.

Note: Chin 344 and 345R cannot be double counted as electives.

8. Complete 18 hours from the following elective courses (no more than 6 hours may be selected from any one department):

ANTHR 335 : Peoples of India. (3:3:0)
WHEN TAUGHT: Winter Odd Yrs.
DESCRIPTION: Society and culture on the Indian subcontinent. Stratification, kinship, marriage, religion, politics, economics.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will be provided an overview of the peoples and cultures of South Asia with an emphasis on India; a region consisting of several hundred languages, multiple ethnicities, many religious traditions, and competing political orientations.
- Students will receive increased knowledge of the cultures of India through in-depth readings, lectures, discussions, and films.
- Students will increase their capacity for critical thinking skills and writing within the discipline through discussions, exams, and a written research papers.

ANTHR 336 : Cinema and Culture in India. (3:3:0)
WHEN TAUGHT: Spring
DESCRIPTION: Anthropology of film in India; the world's largest film industry. Indian cultural and linguistic diversity. How different film genres reflect, distort, or utilize Indian cultural diversity. Evidences in the film work of Satyajit Ray.

**Course Outcomes**

There are no course outcomes available

ANTHR 341 : Ethnonationalism and Southeast Asia. (3:3:0)
WHEN TAUGHT: Winter
RECOMMENDED: Anthr 101.
DESCRIPTION: Historical and ethnographic perspectives on social and political dynamics in Southeast Asia, including upland ethnic minority issues, ethnonationalistic movements, geopolitical influences, war, genocide, religious dynamics, and the rise of nationalism in the region.

**Course Outcomes**

There are no course outcomes available

ANTHR 343 : Chinese Culture and Society. (3:3:0)

WHEN TAUGHT: Fall; Winter Odd Yrs.
DESCRIPTION: Cultural and social institutions of traditional and modern China, including mainland China, Taiwan, Hong Kong, or other areas of Chinese impact.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will gain knowledge of the varieties of cultures encompassed in the vast domains of China as well as the basic social paradigms of Chinese society. Through this study, students will also gain a basic knowledge of the history of China and its importance in both past and present world contexts.

ANTHR 348 : Contemporary Japan. (3:3:0)
DESCRIPTION: Using movies and popular media to examine the social structures and family life dynamics of contemporary Japan.

**Course Outcomes**

There are no course outcomes available

ARTHC 203 : Survey of Oriental Art and Architecture. (3:3:0)
DESCRIPTION: Art and architecture of China, Korea, Japan, Southeast Asia, and India, considering social, religious, and environmental context of various cultures.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

No outcomes are available at this time.

ARTHC 375 : Japanese Art and Architecture. (3:3:0)
PREREQUISITE: ARTHC 201 & ARTHC 202
DESCRIPTION: Japanese art and architecture from its neolithic origins through the dawn of the modern age. Literary, social, and religious contexts considered.

**Course Outcomes**

No outcomes are available at this time.

CHIN 342 : Chinese Film in Translation. (3:2:3)
WHEN TAUGHT: Winter
DESCRIPTION: Survey course covering the silent era to the present, including selections from Republican China, the People's Republic of China, Taiwan, and Hong Kong.

**Course Outcomes**

There are no course outcomes available

CHIN 343 : Chinese Literature in Translation--Poetry. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: All readings in English; topics vary.

**Course Outcomes**

- Outline the basic facts of early Chinese poetry: authors, genres, titles (see Chinese major expected learning outcome 3).
- Utilize the basic approaches to analyzing and appreciating literature (see Chinese major expected learning outcome 3).
- Write clear, convincing prose, and understand the basics of proper formatting and documentation for scholarly prose.

CHIN 344 : Chinese Literature in Translation--Prose. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: All readings in English; topics vary.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Acquire and apply knowledge of literary terminology and frameworks for literary analysis (see Chinese major expected learning outcome 3).
- Analyze and discuss classical and modern Chinese narrative literature and its relations to Chinese cultural traditions (see Chinese major expected learning outcome 3).
- Write coherently and cohesively in English.

CHIN 345R : Chinese Culture. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Selected topics in traditional, modern, and contemporary Chinese culture.

**Course Outcomes**

- Demonstrate cultural literacy of the foundations of Chinese civilization: geography, history, philosophy, thought, political systems and social structures (see Chinese major expected learning outcome 3).

- Explain how cultural factors and institutions have shaped and continue to shape allied disciplines in Chinese studies including language, literature, linguistics, and the visual arts (see Chinese major expected learning outcome 3).
- Write coherently and cohesively in English.

CHIN 346 : Introduction to Chinese Philosophy. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction to native Chinese philosophies of Confucianism and Taoism. Readings in translation of *Lun-yu, Meng-tsu, Lao-tzu,* and *Chuang-tzu.* Themes include self, society, and cosmos.

**Course Outcomes**

- Summarize the important facts, figures, and dates relevant to early Chinese philosophy (see Chinese major expected learning outcome 3).
- Explain the broad outlines of the major schools of Confucianism, Mohism, Daoism, and Legalism, and understand their roles in the development of Chinese society and thought (see Chinese major expected learning outcome 3).
- Formulate philosophical questions.
- Write clear, convincing prose, and understand the basics of proper formatting and documentation for scholarly prose.

CHIN 441 : Classical and Literary Chinese. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Chin 301 or equivalent.

DESCRIPTION: Introduction to syntax and stylistic patterns.

**Course Outcomes**

- Explain the use of the common grammatical particles and patterns essential in mastering the intricacies and subtleties of "classical" Chinese prose (see Chinese major expected learning outcome 3).
- Discuss and apply the meanings and usages of the standard vocabulary of classical Chinese (see Chinese major expected learning outcome 3).
- Summarize the thought of each important early thinker (see Chinese major expected learning outcome 3).

CHIN 442 : Classical and Literary Chinese. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHIN 441

DESCRIPTION: Introduction to syntax and stylistic patterns.

**Course Outcomes**

- Read, analyze, and discuss documentary Chinese prose (see Chinese major expected learning outcome 3).
- Compare and contrast the literary craftsmanship exhibited by the writers of documentary Chinese and discuss traditional Chinese history, literature, and religion (see Chinese major expected learning outcome 3).
- Explain the use of the basic grammatical particles introduced in Chin 441, learn some more advanced ones, and practice using them in new contexts (see Chinese major expected learning outcome 3).

CHIN 443 : Modern Chinese Literature. (3:3:0)

PREREQUISITE: Chin 321 or 322.

DESCRIPTION: Authors, themes, and writing styles of the period 1915--1949. Texts in Chinese.

**Course Outcomes**

- Read, analyze, and discuss Chinese literary texts from the modern (1900-1949) period in Chinese (see Chinese major expected learning outcomes 2 and 3).
- Discuss modern Chinese literary texts in Chinese with fluency and increasing sophistication, demonstrating facility for expressing subjective judgments on literature and other abstract topics in Chinese (see Chinese major expected learning outcomes 1-3).
- Analyze and discuss modern Chinese literary genres, works and authors in their social, historical, and religious contexts (see Chinese major expected learning outcome 3).

CHIN 444 : Contemporary Chinese Literature. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Chin 321 or 322.

DESCRIPTION: Contemporary literature of Taiwan and the PRC. Texts in Chinese.

**Course Outcomes**

- Read, analyze, and write about Chinese literary texts from the contemporary (1949-present) period in Chinese (see Chinese major expected learning outcomes 2 and 3).
- Discuss contemporary Chinese literary texts in Chinese with fluency and increasing sophistication, demonstrating facility for expressing subjective judgments on literature and other abstract topics in Chinese (see Chinese major expected learning outcomes 1 and 3).
- Analyze and discuss contemporary Chinese literary genres, works and authors in their social, historical, and religious contexts (see Chinese major expected learning outcome 3).

CHIN 445R : Chinese Poetry. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: CHIN 343 & CHIN 441
DESCRIPTION: Readings in Chinese poetry. Topics vary from classical and modern poetry. Various themes and genres introduced, emphasizing shi poetry. Texts in Chinese.

**Course Outcomes**

There are no course outcomes available

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.
DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOG 273 : Southeast Asia. (3:3.0:0)

WHEN TAUGHT: Fall Contact Department
DESCRIPTION: Fundamental issues of geography relating to Southeast Asia, including the extraction and marketing of natural resources, economic development, neighborly relations, and how diffusion has influenced the unique cultural, religious, and linguistic characteristics of the region.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

HIST 337 : Pre-modern Korea. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.
DESCRIPTION: Political, economic, and social history of Korea from antiquity to 1850.

**Course Outcomes**

- An understanding of the major features of Korean history and culture both in breadth and in depth.
- An understanding of Korean history contextualized both within the framework of Korean history and in relationship to other histories and other constructions of history.
- The ability to think and write about issues in Korean history in a critical and compelling manner.

HIST 338 : Modern Korea. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.
DESCRIPTION: Political, economic, and social history of Korea from 1850 to the present.

**Course Outcomes**

- Students will be able to describe the most significant aspects of the polity, economy, society and ideology of Korea from 1850 to the present.
- Students will be able to recognize and analyze change over time in East Asia
- Students will be able to evaluate and apply primary source texts to broad historical themes
- Students will be able to conduct individual research and situate it in the broader historical context

HIST 340 : Traditional China. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.
DESCRIPTION: From a loose federation of Neolithic societies, Chinese civilization emerges as East Asia's dominant political and cultural force; developments to ca. 1500.

**Course Outcomes**

- Students will be able to explain and analyze the major social, political, economic, intellectual and cultural developments in the history of Early China (ca. 5000 BC–220 AD
- Students will demonstrate a basic geographical knowledge of China, including significant geological features and major historical cities Moreover, they will be able to discuss how geographical and environmental realities have impacted historical development.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve.

HIST 341 : China Since 1200. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.
DESCRIPTION: Economic and political foundations of modernity during high Imperial China; challenge of new order from the West; rise of Chinese nationalism, revolution, and development to the present.

**Course Outcomes**

There are no course outcomes available

HIST 343 : Traditional Japan. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, social, religious, and cultural developments to ca. 1700.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history until around 1600.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 344 : Modern Japan. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Main themes in Japanese history from Tokugawa times to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history from approximately 1600 to the present.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 347 : Chinese Cultural History. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Methods and approaches of the cultural historian; in-depth investigation of a selected topic in Chinese cultural history. Topics may include women, Silk Roads, material culture, etc.

**Course Outcomes**

- Students will be able to explain and understand the methods and approaches of the cultural historian through an investigation of select topics in Chinese cultural history.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve

HIST 348 : Modern South East Asia. (3:3:0)

DESCRIPTION: Complex history of the varied nations of this vast area: religion, colonialism, nationalism, independence.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in South East Asia and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.

HIST 349 : History of Asian Religions and Thought. (3:3:0)

DESCRIPTION: Major themes in religion, philosophy, and ideas in Asia.

**Course Outcomes**

- Students will be able to understand and analyze key concepts in Chinese thought and religion as well as the logic behind core beliefs and practices
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions.

JAPAN 321 : Reading Modern Documentary Styles. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern documentary styles, emphasizing reading comprehension, grammar, and vocabulary building.

**Course Outcomes**

- Students will increase their ability to understand vocabulary commonly used in newspapers
- Students will be able to read a range of types of news articles (politics, business, human interest, sports, etc.)
- Students will be able to compare and contrast print and television news reports. A written sample will be included in the individual student portfolio. The student portfolio will be formally reviewed at the conclusion of this course.

JAPAN 322 : Reading Modern Short Fiction. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern short fiction, emphasizing grammar, reading comprehension, vocabulary

building, and stylistic analysis.

**Course Outcomes**

- Students will be able to use a variety of dictionary sources that will enable them to read and comprehend modern Japanese prose
- Students will be able to recognize a majority of standard-usage kanji and identify various readings for the characters
- Students will be able to analyze and discuss a variety of modern Japanese literary texts at an intermediate level in the target language. A writing sample will be included in the individual student portfolio.

JAPAN 345 : Traditional Japanese Culture. (3:3:0)

WHEN TAUGHT: Winter; Spring Contact Department

DESCRIPTION: General survey emphasizing aesthetics, religion, and value systems. All readings in English.

**Course Outcomes**

- Students will be able to speak and write about such features of culture as language, literature, thought, religion, aesthetics, art and music. A writing sample will be included in the individual student portfolio.

JAPAN 350 : Japanese Literature in Translation--Eighth Through Sixteenth Centuries. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 700 through 1600 (Nara, Heian, and medieval periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of premodern literature in verbal and written forms. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their knowledge and understanding of major works and genres in verbal and written forms.

JAPAN 351 : Japanese Literature in Translation--Seventeenth Through Nineteenth Centuries. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 1600 through 1900 (Edo and Meiji periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of early modern Japanese literature orally and in writing. A writing sample will be included in individual student portfolio.
- Students will demonstrate their understanding of key literary works and genres in early modern Japanese literature in verbal and written forms.

JAPAN 352 : Japanese Literature in Translation: The Modern Era. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from Meiji period to the present.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of human aspects in works of modern Japanese literature orally and in writing. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their ability to analyze key works and genres in modern Japanese literature in oral and written form.

JAPAN 441 : Introduction to Classical Japanese. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: JAPAN 321 & JAPAN 322

DESCRIPTION: Reading of premodern texts, emphasizing grammar and syntax, and showing differences from and influences on the modern idiom.

**Course Outcomes**

- Students will be able to analyze and discuss the influence of the pre-modern language on present-day Japanese.
- Students will read and analyze the content and linguistic features of important premodern literary texts. A writing sample will be included in the individual student portfolio.

JAPAN 444 : Reading Modern Japan. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Japan 321, 322; or equivalents.

DESCRIPTION: Fictional texts from major twentieth-century authors. Texts primarily in Japanese.

**Course Outcomes**

- Students will demonstrate their ability to read and interpret modern literary texts with sophistication in both oral and written forms. A writing sample will be included in the individual student portfolio.

KOREA 321 : Selected Readings of Modern Korean. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Korea 301 or equivalent.

DESCRIPTION: Mixed script (with hanja) and other readings from modern documentary and literary texts, emphasizing comprehension, grammar, and vocabulary building.

**Course Outcomes**

- students will develop skills in reading advanced level texts in literature and social sciences.

KOREA 340 : Korean Literature to 1900. (3:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: KOREA 302

DESCRIPTION: Korean literature from the earliest times to 1900. Emphasis on basic literary concepts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Non-music major status.

DESCRIPTION: Traditional music of selected cultures of Asia, Oceania, Africa, Europe, and the Americas, including both folk and art music traditions.

NOTE: For non-music majors. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will recognize the diversity of aesthetic values among the world's cultures.
- Students will understand and appreciate cultural traditions outside of their own.
- Students will transcend natural tendencies towards ethnocentricity.

- Students will discover the various ways in which the arts can express values and devotion.

MUSIC 336R : Balinese Gamelan. (1:2:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Playing and performing on the Balinese gamelan (percussion) instruments.

**Course Outcomes**

- Students participating in Gamelan will learn the mental and technical skills required to memorize and perform works from the traditional Balinese gamelan repertoire, including becoming proficient on one or more of the instruments in the ensemble.
- Students will also use music as a window into the relationship between Balinese musical practice and Balinese social and religious culture, and, more broadly, develop a deep appreciation for this musicâ s profound contribution to the life experience.
- In the spirit of BYUâ s global mission and the breadth of educational experience advocated in BYUâ s guiding documents, successful students in gamelan will develop a greater understanding of and respect for music and traditions outside of their native experience. This respect will better prepare them to represent BYU and the Church in an increasingly interconnected global society.

POLI 348 : Government and Politics of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

(cannot be double counted with item 5 above)
POLI 353 : China: Government and Politics. (3:3:0)
DESCRIPTION: Structure and behavior of politics; contemporary problems.

**Course Outcomes**

There are no course outcomes available

POLI 354 : Japan: Government and Politics. (3:3:0)
DESCRIPTION: Structure and behavior of politics; contemporary problems.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

(cannot be double counted with item 5 above)
POLI 386 : Japanese Foreign Policy. (3:3:0)
DESCRIPTION: Process and outcomes of Japan's foreign policy; analysis of its relations with other nations in a historical and contemporary setting.

**Course Outcomes**

There are no course outcomes available

POLI 388 : Chinese Foreign Policy. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Structure and process of foreign policy of the People's Republic of China.

**Course Outcomes**

There are no course outcomes available

REL C 351 : Survey of World Religions. (2:2:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Explores the origins, theological doctrines, scriptural works, and religious practices of several internationally religious traditions, including Christianity, Islam, Judaism, Hinduism, Sikhism, Buddhism, Taoism, Confucianism, and Shinto. Comparisions are offered between these religions,

and Latter-day Saints belief and practice.

**Course Outcomes**

There are no course outcomes available

: Honors Survey of World Religions.

**Course Outcomes**

Other electives: If approved beforehand, up to 9 hours of 330R or 399R credit may be counted for overseas work done under one of the following: Study Abroad, internships, mentored research, or independent field studies.

*Hours include courses that may fulfill university core requirements.

## Program Requirements | View MAP

1. Courses cannot be double counted between the different requirement sections in the major.
2. Complete the GE languages of learning requirement in Japanese.
3. There is a strong expectation that majors will do work in Asia via Study Abroad, internships, etc.
4. Complete the following core courses:

ASIAN 200 : Introduction to Asian Studies: Methods and Materials. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Sources, materials, and methods of research and writing; critical analysis of research project.
NOTE: Required of all Asian Studies majors early in the program.

**Course Outcomes**
- The student can identify countries and major geographic features of Asia on a map. The student can relate basic facts about the history, economics, politics, society and cultures of the countries of Asia.
- The student will be able to apply effective search strategies to locate and to evaluate information on Asia in all formats (print, electronic, microform, video, DVD) and of all types (books, articles, reference materials, etc.). The student will be able to employ proper research skills to carry out research on a topic related to Asia and present results in oral and written academic reports.

ASIAN 342 : Asian Literary Traditions. (3:3:0)
DESCRIPTION: Comparative analysis of Asian literary works spanning several traditions.

**Course Outcomes**
- Apply basic concepts of comparative literary analysis to course texts.
- Gain familiarity with Asian literary traditions, particularly India, China, and Japan.
- Demonstrate strong critical reading, writing, and analytical skills across linguistic and national traditions.

HIST 231 : Introduction to East Asian History. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Major themes in the history, thought, and culture of Asian societies from antiquity to the present.

**Course Outcomes**
- Students will be able to explain and analyze the major political, economic, and social developments in the history of China, Korea, and Japan from antiquity to the present
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meaning and significance of historical events on contemporary identity and foreign relations.
- Students will be able to analyze historical arguments.

IHUM 240 : Introduction to the Humanities of Asia. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Major arts of Asian cultures in their historical, religious, and philosophical settings.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

5. Complete one course from the following:

POLI 348 : Government and Politics of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

6. Complete the following core course:

ASIAN 495 : Senior Seminar. (1:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Senior status or program coordinator's consent.

DESCRIPTION: Learning research and writing skills necessary to prepare and present major senior research paper.

NOTE: Most all major requirements should be completed before registering for this course.

**Course Outcomes**

- In this course, you will learn how to complete a significant research project using appropriate methods of research, analysis, and a professional standard of writing. In doing so, you will draw heavily from your knowledge from previous courses.
- You will do this by studying a specialized topic in Asian Studies under the guidance of a professor. Thus, you will deepen your familiarity with a sub-field within Asian Studies and Asian Studies more broadly.
- You will also learn how to present your findings in a high-quality oral presentation, and how to give and receive appropriate feedback within a community of scholars.

7. Complete the following history core courses (history core courses cannot be double counted as electives):

HIST 343 : Traditional Japan. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, social, religious, and cultural developments to ca. 1700.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history until around 1600.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 344 : Modern Japan. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Main themes in Japanese history from Tokugawa times to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history from approximately 1600 to the present.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

8. Complete the required courses for the Language Certificate in Japanese and take the OPI and WPT assessments. These assessments must be done on the BYU campus, and must be completed before graduation. See http://languagecertificate.byu.edu/program-requirements for complete details. Complete the following:

JAPAN 321 : Reading Modern Documentary Styles. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern documentary styles, emphasizing reading comprehension, grammar, and vocabulary building.

**Course Outcomes**

- Students will increase their ability to understand vocabulary commonly used in newspapers
- Students will be able to read a range of types of news articles (politics, business, human interest, sports, etc.)
- Students will be able to compare and contrast print and television news reports. A written sample will be included in the individual student portfolio. The student portfolio will be formally reviewed at the conclusion of this course.

JAPAN 345 : Traditional Japanese Culture. (3:3:0)

WHEN TAUGHT: Winter; Spring Contact Department

DESCRIPTION: General survey emphasizing aesthetics, religion, and value systems. All readings in English.

**Course Outcomes**

- Students will be able to speak and write about such features of culture as language, literature, thought, religion, aesthetics, art and music. A writing sample will be included in the individual student portfolio.

JAPAN 322 : Reading Modern Short Fiction. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern short fiction, emphasizing grammar, reading comprehension, vocabulary building, and stylistic analysis.

**Course Outcomes**

- Students will be able to use a variety of dictionary sources that will enable them to read and comprehend modern Japanese prose
- Students will be able to recognize a majority of standard-usage kanji and identify various readings for the characters
- Students will be able to analyze and discuss a variety of modern Japanese literary texts at an intermediate level in the target language. A writing sample will be included in the individual student portfolio.

**Or**:

JAPAN 351 : Japanese Literature in Translation--Seventeenth Through Nineteenth Centuries. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 1600 through 1900 (Edo and Meiji periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of early modern Japanese literature orally and in writing. A writing sample will be included in individual student portfolio.
- Students will demonstrate their understanding of key literary works and genres in early modern Japanese literature in verbal and written forms.

**Or**:

JAPAN 352 : Japanese Literature in Translation: The Modern Era. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from Meiji period to the present.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of human aspects in works of modern Japanese literature orally and in writing. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their ability to analyze key works and genres in modern Japanese literature in oral and written form.

Note: These courses cannot be double counted as electives.

9. Complete 18 hours from the following elective courses (no more than 6 hours may be selected from any one department):

ANTHR 335 : Peoples of India. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Society and culture on the Indian subcontinent. Stratification, kinship, marriage, religion, politics, economics.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will be provided an overview of the peoples and cultures of South Asia with an emphasis on India; a region consisting of several hundred languages, multiple ethnicities, many religious traditions, and competing political orientations.
- Students will receive increased knowledge of the cultures of India through in-depth readings, lectures, discussions, and films.
- Students will increase their capacity for critical thinking skills and writing within the discipline through discussions, exams, and a written research papers.

ANTHR 336 : Cinema and Culture in India. (3:3:0)

WHEN TAUGHT: Spring

DESCRIPTION: Anthropology of film in India; the world's largest film industry. Indian cultural and linguistic diversity. How different film genres reflect, distort, or utilize Indian cultural diversity. Evidences in the film work of Satyajit Ray.

**Course Outcomes**

There are no course outcomes available

ANTHR 341 : Ethnonationalism and Southeast Asia. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: Anthr 101.

DESCRIPTION: Historical and ethnographic perspectives on social and political dynamics in Southeast Asia, including upland ethnic minority issues, ethnonationalistic movements, geopolitical influences, war, genocide, religious dynamics, and the rise of nationalism in the region.

**Course Outcomes**

There are no course outcomes available

ANTHR 343 : Chinese Culture and Society. (3:3:0)

WHEN TAUGHT: Fall; Winter Odd Yrs.

DESCRIPTION: Cultural and social institutions of traditional and modern China, including mainland China, Taiwan, Hong Kong, or other areas of Chinese impact.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will gain knowledge of the varieties of cultures encompassed in the vast domains of China as well as the basic social paradigms of Chinese society. Through this study, students will also gain a basic knowledge of the history of China and its importance in both past and present world contexts.

ANTHR 348 : Contemporary Japan. (3:3:0)

DESCRIPTION: Using movies and popular media to examine the social structures and family life dynamics of contemporary Japan.

**Course Outcomes**

There are no course outcomes available

ARTHC 203 : Survey of Oriental Art and Architecture. (3:3:0)

DESCRIPTION: Art and architecture of China, Korea, Japan, Southeast Asia, and India, considering social, religious, and environmental context of various cultures.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

No outcomes are available at this time.

ARTHC 375 : Japanese Art and Architecture. (3:3:0)

PREREQUISITE: ARTHC 201 & ARTHC 202

DESCRIPTION: Japanese art and architecture from its neolithic origins through the dawn of the modern age. Literary, social, and religious contexts considered.

**Course Outcomes**

No outcomes are available at this time.

CHIN 342 : Chinese Film in Translation. (3:2:3)

WHEN TAUGHT: Winter

DESCRIPTION: Survey course covering the silent era to the present, including selections from Republican China, the People's Republic of China, Taiwan, and Hong Kong.

**Course Outcomes**

There are no course outcomes available

CHIN 343 : Chinese Literature in Translation--Poetry. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: All readings in English; topics vary.

**Course Outcomes**

- Outline the basic facts of early Chinese poetry: authors, genres, titles (see Chinese major expected learning outcome 3).
- Utilize the basic approaches to analyzing and appreciating literature (see Chinese major expected learning outcome 3).
- Write clear, convincing prose, and understand the basics of proper formatting and documentation for scholarly prose.

CHIN 344 : Chinese Literature in Translation--Prose. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: All readings in English; topics vary.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Acquire and apply knowledge of literary terminology and frameworks for literary analysis (see Chinese major expected learning outcome 3).

- Analyze and discuss classical and modern Chinese narrative literature and its relations to Chinese cultural traditions (see Chinese major expected learning outcome 3).
- Write coherently and cohesively in English.

CHIN 345R : Chinese Culture. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Selected topics in traditional, modern, and contemporary Chinese culture.

**Course Outcomes**

- Demonstrate cultural literacy of the foundations of Chinese civilization: geography, history, philosophy, thought, political systems and social structures (see Chinese major expected learning outcome 3).
- Explain how cultural factors and institutions have shaped and continue to shape allied disciplines in Chinese studies including language, literature, linguistics, and the visual arts (see Chinese major expected learning outcome 3).
- Write coherently and cohesively in English.

CHIN 346 : Introduction to Chinese Philosophy. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction to native Chinese philosophies of Confucianism and Taoism. Readings in translation of *Lun-yu, Meng-tsu, Lao-tzu,* and *Chuang-tzu.* Themes include self, society, and cosmos.

**Course Outcomes**

- Summarize the important facts, figures, and dates relevant to early Chinese philosophy (see Chinese major expected learning outcome 3).
- Explain the broad outlines of the major schools of Confucianism, Mohism, Daoism, and Legalism, and understand their roles in the development of Chinese society and thought (see Chinese major expected learning outcome 3).
- Formulate philosophical questions.
- Write clear, convincing prose, and understand the basics of proper formatting and documentation for scholarly prose.

CHIN 441 : Classical and Literary Chinese. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Chin 301 or equivalent.

DESCRIPTION: Introduction to syntax and stylistic patterns.

**Course Outcomes**

- Explain the use of the common grammatical particles and patterns essential in mastering the intricacies and subtleties of "classical" Chinese prose (see Chinese major expected learning outcome 3).
- Discuss and apply the meanings and usages of the standard vocabulary of classical Chinese (see Chinese major expected learning outcome 3).
- Summarize the thought of each important early thinker (see Chinese major expected learning outcome 3).

CHIN 442 : Classical and Literary Chinese. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHIN 441

DESCRIPTION: Introduction to syntax and stylistic patterns.

**Course Outcomes**

- Read, analyze, and discuss documentary Chinese prose (see Chinese major expected learning outcome 3).
- Compare and contrast the literary craftsmanship exhibited by the writers of documentary Chinese and discuss traditional Chinese history, literature, and religion (see Chinese major expected learning outcome 3).
- Explain the use of the basic grammatical particles introduced in Chin 441, learn some more advanced ones, and practice using them in new contexts (see Chinese major expected learning outcome 3).

CHIN 443 : Modern Chinese Literature. (3:3:0)

PREREQUISITE: Chin 321 or 322.

DESCRIPTION: Authors, themes, and writing styles of the period 1915--1949. Texts in Chinese.

**Course Outcomes**

- Read, analyze, and discuss Chinese literary texts from the modern (1900-1949) period in Chinese (see Chinese major expected learning outcomes 2 and 3).
- Discuss modern Chinese literary texts in Chinese with fluency and increasing sophistication, demonstrating facility for expressing subjective judgments on literature and other abstract topics in Chinese (see Chinese major expected learning outcomes 1-3).
- Analyze and discuss modern Chinese literary genres, works and authors in their social, historical, and religious contexts (see Chinese major expected learning outcome 3).

CHIN 444 : Contemporary Chinese Literature. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Chin 321 or 322.

DESCRIPTION: Contemporary literature of Taiwan and the PRC. Texts in Chinese.

**Course Outcomes**

- Read, analyze, and write about Chinese literary texts from the contemporary (1949-present) period in Chinese (see Chinese major expected learning outcomes 2 and 3).
- Discuss contemporary Chinese literary texts in Chinese with fluency and increasing sophistication, demonstrating facility for expressing subjective judgments on literature and other abstract topics in Chinese (see Chinese major expected learning outcomes 1 and 3).
- Analyze and discuss contemporary Chinese literary genres, works and authors in their social, historical, and religious contexts (see Chinese major expected learning outcome 3).

CHIN 445R : Chinese Poetry. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: CHIN 343 & CHIN 441

DESCRIPTION: Readings in Chinese poetry. Topics vary from classical and modern poetry. Various themes and genres introduced, emphasizing shi poetry. Texts in Chinese.

**Course Outcomes**

There are no course outcomes available

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOG 273 : Southeast Asia. (3:3.0:0)

WHEN TAUGHT: Fall Contact Department

DESCRIPTION: Fundamental issues of geography relating to Southeast Asia, including the extraction and marketing of natural resources, economic development, neighborly relations, and how diffusion has influenced the unique cultural, religious, and linguistic characteristics of the region.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

HIST 337 : Pre-modern Korea. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, economic, and social history of Korea from antiquity to 1850.

**Course Outcomes**

- An understanding of the major features of Korean history and culture both in breadth and in depth.
- An understanding of Korean history contextualized both within the framework of Korean history and in relationship to other histories and other constructions of history.
- The ability to think and write about issues in Korean history in a critical and compelling manner.

HIST 338 : Modern Korea. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, and social history of Korea from 1850 to the present.

**Course Outcomes**

- Students will be able to describe the most significant aspects of the polity, economy, society and ideology of Korea from 1850 to the present.
- Students will be able to recognize and analyze change over time in East Asia
- Students will be able to evaluate and apply primary source texts to broad historical themes
- Students will be able to conduct individual research and situate it in the broader historical context

HIST 340 : Traditional China. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: From a loose federation of Neolithic societies, Chinese civilization emerges as East Asia's dominant political and cultural force; developments to ca. 1500.

**Course Outcomes**

- Students will be able to explain and analyze the major social, political, economic, intellectual and cultural developments in the history of Early China (ca. 5000 BC–220 AD
- Students will demonstrate a basic geographical knowledge of China, including significant geological features and major historical cities Moreover, they will be able to discuss how geographical and environmental realities have impacted historical development.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in

secondary scholarship should improve.

HIST 341 : China Since 1200. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Economic and political foundations of modernity during high Imperial China; challenge of new order from the West; rise of Chinese nationalism, revolution, and development to the present.

**Course Outcomes**

There are no course outcomes available

HIST 343 : Traditional Japan. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, social, religious, and cultural developments to ca. 1700.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history until around 1600.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 344 : Modern Japan. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Main themes in Japanese history from Tokugawa times to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history from approximately 1600 to the present.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 347 : Chinese Cultural History. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Methods and approaches of the cultural historian; in-depth investigation of a selected topic in Chinese cultural history. Topics may include women, Silk Roads, material culture, etc.

**Course Outcomes**

- Students will be able to explain and understand the methods and approaches of the cultural historian through an investigation of select topics in Chinese cultural history.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve

HIST 348 : Modern South East Asia. (3:3:0)

DESCRIPTION: Complex history of the varied nations of this vast area: religion, colonialism, nationalism, independence.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in South East Asia and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.

HIST 349 : History of Asian Religions and Thought. (3:3:0)

DESCRIPTION: Major themes in religion, philosophy, and ideas in Asia.

**Course Outcomes**

- Students will be able to understand and analyze key concepts in Chinese thought and religion as well as the logic behind core beliefs and practices
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions.

JAPAN 321 : Reading Modern Documentary Styles. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern documentary styles, emphasizing reading comprehension, grammar, and vocabulary building.

**Course Outcomes**

- Students will increase their ability to understand vocabulary commonly used in newspapers
- Students will be able to read a range of types of news articles (politics, business, human interest, sports, etc.)
- Students will be able to compare and contrast print and television news reports. A written sample will be included in the individual student portfolio. The student portfolio will be formally reviewed at the conclusion of this course.

JAPAN 322 : Reading Modern Short Fiction. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern short fiction, emphasizing grammar, reading comprehension, vocabulary building, and stylistic analysis.

**Course Outcomes**

- Students will be able to use a variety of dictionary sources that will enable them to read and comprehend modern Japanese prose
- Students will be able to recognize a majority of standard-usage kanji and identify various readings for the characters
- Students will be able to analyze and discuss a variety of modern Japanese literary texts at an intermediate level in the target language. A writing sample will be included in the individual student portfolio.

JAPAN 345 : Traditional Japanese Culture. (3:3:0)

WHEN TAUGHT: Winter; Spring Contact Department

DESCRIPTION: General survey emphasizing aesthetics, religion, and value systems. All readings in English.

**Course Outcomes**

- Students will be able to speak and write about such features of culture as language, literature, thought, religion, aesthetics, art and music. A writing sample will be included in the individual student portfolio.

JAPAN 350 : Japanese Literature in Translation--Eighth Through Sixteenth Centuries. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 700 through 1600 (Nara, Heian, and medieval periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of premodern literature in verbal and written forms. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their knowledge and understanding of major works and genres in verbal and written forms.

JAPAN 351 : Japanese Literature in Translation--Seventeenth Through Nineteenth Centuries. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 1600 through 1900 (Edo and Meiji periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of early modern Japanese literature orally and in writing. A writing sample will be included in individual student portfolio.
- Students will demonstrate their understanding of key literary works and genres in early modern Japanese literature in verbal and written forms.

JAPAN 352 : Japanese Literature in Translation: The Modern Era. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from Meiji period to the present.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of human aspects in works of modern Japanese literature orally and in writing. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their ability to analyze key works and genres in modern Japanese literature in oral and written form.

JAPAN 441 : Introduction to Classical Japanese. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: JAPAN 321 & JAPAN 322

DESCRIPTION: Reading of premodern texts, emphasizing grammar and syntax, and showing differences from and influences on the modern idiom.

**Course Outcomes**

- Students will be able to analyze and discuss the influence of the pre-modern language on present-day Japanese.
- Students will read and analyze the content and linguistic features of important premodern literary texts. A writing sample will be included in the individual student portfolio.

JAPAN 444 : Reading Modern Japan. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Japan 321, 322; or equivalents.

DESCRIPTION: Fictional texts from major twentieth-century authors. Texts primarily in Japanese.

**Course Outcomes**

- Students will demonstrate their ability to read and interpret modern literary texts with sophistication in both oral and written forms. A writing sample will be included in the individual student portfolio.

KOREA 321 : Selected Readings of Modern Korean. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Korea 301 or equivalent.

DESCRIPTION: Mixed script (with hanja) and other readings from modern documentary and literary texts, emphasizing comprehension, grammar, and vocabulary building.

**Course Outcomes**

- students will develop skills in reading advanced level texts in literature and social sciences.

KOREA 340 : Korean Literature to 1900. (3:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: KOREA 302

DESCRIPTION: Korean literature from the earliest times to 1900. Emphasis on basic literary concepts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will learn of the wide range of literary genre available in Korea prior to the 20th century.
- Students will learn at least five styles of poetry common in Korea from the Silla period to the late Joseon period, including hyangga, Chinese (Tang) poetry, sijo, gasa, and the poetry of the Yongbi-eo cheon'ga.
- Fiction, in the form of tales, legends, fables, and uniquely Korean "pansori" novels will become familiar to students in this course.

KOREA 345 : Korean Culture. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Selected topics in traditional, modern, and contemporary Korean culture. All readings in English.

**Course Outcomes**

- -- become familiar with the historical framework of Korea, the major dynasties and historic events.-- become familiar with major religions including shamanism, Buddhism, Confucianism, and Christianity as well as some "new religions".-- learn basic concepts of lineage and family structure, organization and activities, including ancestor veneration ceremonies.-- learn the political structure of South Korea and North Korea

KOREA 441 : Classical Korean (Hanmun). (3:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: KOREA 321; or CHIN 441

DESCRIPTION: Reading of premodern, documentary Sino-Korean texts, including genealogy records and the Chosŏn Dynasty Annals.

**Course Outcomes**

- Students will learn to read academic journals articles, reference works, genealogies, and other primary source documents, all of which contain Sino-Korean vocabulary.This course will assist students who work for the government or need to take advanced proficiency test to do well and excel on such tests in their future professions.

KOREA 443 : Korean Literature after 1900. (3:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: KOREA 302

DESCRIPTION: Literary texts from major post-1900 authors, in Korean, emphasizing reading, translating, and criticism.

**Course Outcomes**

- Students will learn of the poetry, short stories and novels of the 20th and 21st centuries.Major literature from Korea before the division in 1945, and post-division in South Korea (with a little readings of North Korean literature) will be covered.

MUSIC 203 : World Music Cultures. (3:3:0)

WHEN Fall; Winter

TAUGHT:
PREREQUISITE: Non-music major status.
DESCRIPTION: Traditional music of selected cultures of Asia, Oceania, Africa, Europe, and the Americas, including both folk and art music traditions.
NOTE: For non-music majors. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will recognize the diversity of aesthetic values among the world's cultures.
- Students will understand and appreciate cultural traditions outside of their own.
- Students will transcend natural tendencies towards ethnocentricity.
- Students will discover the various ways in which the arts can express values and devotion.

MUSIC 336R : Balinese Gamelan. (1:2:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Playing and performing on the Balinese gamelan (percussion) instruments.

**Course Outcomes**

- Students participating in Gamelan will learn the mental and technical skills required to memorize and perform works from the traditional Balinese gamelan repertoire, including becoming proficient on one or more of the instruments in the ensemble.
- Students will also use music as a window into the relationship between Balinese musical practice and Balinese social and religious culture, and, more broadly, develop a deep appreciation for this musicâ s profound contribution to the life experience.
- In the spirit of BYUâ s global mission and the breadth of educational experience advocated in BYUâ s guiding documents, successful students in gamelan will develop a greater understanding of and respect for music and traditions outside of their native experience. This respect will better prepare them to represent BYU and the Church in an increasingly interconnected global society.

POLI 348 : Government and Politics of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

(cannot be double counted with item 5 above)
POLI 353 : China: Government and Politics. (3:3:0)
DESCRIPTION: Structure and behavior of politics; contemporary problems.

**Course Outcomes**

There are no course outcomes available

POLI 354 : Japan: Government and Politics. (3:3:0)
DESCRIPTION: Structure and behavior of politics; contemporary problems.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

(cannot be double counted with item 5 above)
POLI 386 : Japanese Foreign Policy. (3:3:0)
DESCRIPTION: Process and outcomes of Japan's foreign policy; analysis of its relations with other nations in a historical and contemporary setting.

**Course Outcomes**

There are no course outcomes available

POLI 388 : Chinese Foreign Policy. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Structure and process of foreign policy of the People's Republic of China.

**Course Outcomes**

There are no course outcomes available

REL C 351 : Survey of World Religions. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Explores the origins, theological doctrines, scriptural works, and religious practices of several internationally religious traditions, including Christianity, Islam, Judaism, Hinduism, Sikhism, Buddhism, Taoism, Confucianism, and Shinto. Comparisions are offered between these religions, and Latter-day Saints belief and practice.

**Course Outcomes**

There are no course outcomes available

: Honors Survey of World Religions.

**Course Outcomes**

Other electives: If approved beforehand, up to 9 hours of 330R or 399R credit may be counted for overseas work done under one of the following: Study Abroad, internships, mentored research, or independent field studies.

*Hours include courses that may fulfill university core requirements.

## Program Requirements | View MAP

1. Courses cannot be double counted between the different requirement sections in the major.
2. Complete the GE languages of learning requirement in Korean.
3. There is a strong expectation that majors will do work in Asia via Study Abroad, internships, etc.
4. Complete the following core courses:

ASIAN 200 : Introduction to Asian Studies: Methods and Materials. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Sources, materials, and methods of research and writing; critical analysis of research project.
NOTE: Required of all Asian Studies majors early in the program.

**Course Outcomes**
- The student can identify countries and major geographic features of Asia on a map. The student can relate basic facts about the history, economics, politics, society and cultures of the countries of Asia.
- The student will be able to apply effective search strategies to locate and to evaluate information on Asia in all formats (print, electronic, microform, video, DVD) and of all types (books, articles, reference materials, etc.). The student will be able to employ proper research skills to carry out research on a topic related to Asia and present results in oral and written academic reports.

ASIAN 342 : Asian Literary Traditions. (3:3:0)
DESCRIPTION: Comparative analysis of Asian literary works spanning several traditions.

**Course Outcomes**
- Apply basic concepts of comparative literary analysis to course texts.
- Gain familiarity with Asian literary traditions, particularly India, China, and Japan.
- Demonstrate strong critical reading, writing, and analytical skills across linguistic and national traditions.

HIST 231 : Introduction to East Asian History. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Major themes in the history, thought, and culture of Asian societies from antiquity to the present.

**Course Outcomes**
- Students will be able to explain and analyze the major political, economic, and social developments in the history of China, Korea, and Japan from antiquity to the present
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meaning and significance of historical events on contemporary identity and foreign relations.
- Students will be able to analyze historical arguments.

IHUM 240 : Introduction to the Humanities of Asia. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Major arts of Asian cultures in their historical, religious, and philosophical settings.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

5. Complete one course from the following:

POLI 348 : Government and Politics of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

6. Complete the following core course:

ASIAN 495 : Senior Seminar. (1:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Senior status or program coordinator's consent.

DESCRIPTION: Learning research and writing skills necessary to prepare and present major senior research paper.

NOTE: Most all major requirements should be completed before registering for this course.

**Course Outcomes**

- In this course, you will learn how to complete a significant research project using appropriate methods of research, analysis, and a professional standard of writing. In doing so, you will draw heavily from your knowledge from previous courses.
- You will do this by studying a specialized topic in Asian Studies under the guidance of a professor. Thus, you will deepen your familiarity with a sub-field within Asian Studies and Asian Studies more broadly.
- You will also learn how to present your findings in a high-quality oral presentation, and how to give and receive appropriate feedback within a community of scholars.

7. Complete the following history core courses (history core courses cannot be double counted as electives):

HIST 337 : Pre-modern Korea. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, economic, and social history of Korea from antiquity to 1850.

**Course Outcomes**

- An understanding of the major features of Korean history and culture both in breadth and in depth.
- An understanding of Korean history contextualized both within the framework of Korean history and in relationship to other histories and other constructions of history.
- The ability to think and write about issues in Korean history in a critical and compelling manner.

HIST 338 : Modern Korea. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, and social history of Korea from 1850 to the present.

**Course Outcomes**

- Students will be able to describe the most significant aspects of the polity, economy, society and ideology of Korea from 1850 to the present.
- Students will be able to recognize and analyze change over time in East Asia
- Students will be able to evaluate and apply primary source texts to broad historical themes
- Students will be able to conduct individual research and situate it in the broader historical context

8. Complete the required courses for the Language Certificate in Korean and take the OPI and WPT assessments. These assessments must be done on the BYU campus, and must be completed before graduation. See http://languagecertificate.byu.edu/program-requirements for complete details. Complete the following:

KOREA 302 : Third-Year Korean 2. (4:5:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Korea 301 or equivalent.

DESCRIPTION: Continuation of Korea 301. Vocabulary, grammar, discourse, hanja, composition, pronunciation, and culture.

**Course Outcomes**

- Korean 302Students will be able to;1. Speak in most social language situations and some complicated language situations with confidence. ACTFL 3
- 2. Read and understand some intermediate level of formal topics.
- 3. Compose one page Korean using some four-character proverbs and some high level vocabulary without major structural flaws.

KOREA 345 : Korean Culture. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Selected topics in traditional, modern, and contemporary Korean culture. All readings in English.

**Course Outcomes**

- -- become familiar with the historical framework of Korea, the major dynasties and historic events.-- become familiar with major religions including shamanism, Buddhism, Confucianism, and Christianity as well as some "new religions".-- learn basic concepts of lineage and family structure, organization and activities, including ancestor veneration ceremonies.-- learn the political structure of South Korea and North Korea

KOREA 321 : Selected Readings of Modern Korean. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Korea 301 or equivalent.

DESCRIPTION: Mixed script (with hanja) and other readings from modern documentary and literary texts, emphasizing comprehension, grammar, and vocabulary building.

**Course Outcomes**

- students will develop skills in reading advanced level texts in literature and social sciences.

**Or**:

KOREA 340 : Korean Literature to 1900. (3:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: KOREA 302

DESCRIPTION: Korean literature from the earliest times to 1900. Emphasis on basic literary concepts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will learn of the wide range of literary genre available in Korea prior to the 20th century.
- Students will learn at least five styles of poetry common in Korea from the Silla period to the late Joseon period, including hyangga, Chinese (Tang) poetry, sijo, gasa, and the poetry of the Yongbi-eo cheon'ga.
- Fiction, in the form of tales, legends, fables, and uniquely Korean "pansori" novels will become familiar to students in this course.

**Or**:

KOREA 441 : Classical Korean (Hanmun). (3:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: KOREA 321; or CHIN 441

DESCRIPTION: Reading of premodern, documentary Sino-Korean texts, including genealogy records and the Chosŏn Dynasty Annals.

**Course Outcomes**

- Students will learn to read academic journals articles, reference works, genealogies, and other primary source documents, all of which contain Sino-Korean vocabulary.This course will assist students who work for the government or need to take advanced proficiency test to do well and excel on such tests in their future professions.

Note: These courses cannot be double counted as electives.

9. Complete 18 hours from the following elective courses (no more than 6 hours may be selected from any one department):

ANTHR 335 : Peoples of India. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Society and culture on the Indian subcontinent. Stratification, kinship, marriage, religion, politics, economics.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will be provided an overview of the peoples and cultures of South Asia with an emphasis on India; a region consisting of several hundred languages, multiple ethnicities, many religious traditions, and competing political orientations.
- Students will receive increased knowledge of the cultures of India through in-depth readings, lectures, discussions, and films.
- Students will increase their capacity for critical thinking skills and writing within the discipline through discussions, exams, and a written research papers.

ANTHR 336 : Cinema and Culture in India. (3:3:0)

WHEN TAUGHT: Spring

DESCRIPTION: Anthropology of film in India; the world's largest film industry. Indian cultural and linguistic diversity. How different film genres reflect, distort, or utilize Indian cultural diversity. Evidences in the film work of Satyajit Ray.

**Course Outcomes**

There are no course outcomes available

ANTHR 341 : Ethnonationalism and Southeast Asia. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: Anthr 101.
DESCRIPTION: Historical and ethnographic perspectives on social and political dynamics in Southeast Asia, including upland ethnic minority issues, ethnonationalistic movements, geopolitical influences, war, genocide, religious dynamics, and the rise of nationalism in the region.

**Course Outcomes**

There are no course outcomes available

ANTHR 343 : Chinese Culture and Society. (3:3:0)
WHEN TAUGHT: Fall; Winter Odd Yrs.
DESCRIPTION: Cultural and social institutions of traditional and modern China, including mainland China, Taiwan, Hong Kong, or other areas of Chinese impact.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will gain knowledge of the varieties of cultures encompassed in the vast domains of China as well as the basic social paradigms of Chinese society. Through this study, students will also gain a basic knowledge of the history of China and its importance in both past and present world contexts.

ANTHR 348 : Contemporary Japan. (3:3:0)
DESCRIPTION: Using movies and popular media to examine the social structures and family life dynamics of contemporary Japan.

**Course Outcomes**

There are no course outcomes available

ARTHC 203 : Survey of Oriental Art and Architecture. (3:3:0)
DESCRIPTION: Art and architecture of China, Korea, Japan, Southeast Asia, and India, considering social, religious, and environmental context of various cultures.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

No outcomes are available at this time.

ARTHC 375 : Japanese Art and Architecture. (3:3:0)
PREREQUISITE: ARTHC 201 & ARTHC 202
DESCRIPTION: Japanese art and architecture from its neolithic origins through the dawn of the modern age. Literary, social, and religious contexts considered.

**Course Outcomes**

No outcomes are available at this time.

CHIN 342 : Chinese Film in Translation. (3:2:3)
WHEN TAUGHT: Winter
DESCRIPTION: Survey course covering the silent era to the present, including selections from Republican China, the People's Republic of China, Taiwan, and Hong Kong.

**Course Outcomes**

There are no course outcomes available

CHIN 343 : Chinese Literature in Translation--Poetry. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: All readings in English; topics vary.

**Course Outcomes**

- Outline the basic facts of early Chinese poetry: authors, genres, titles (see Chinese major expected learning outcome 3).
- Utilize the basic approaches to analyzing and appreciating literature (see Chinese major expected learning outcome 3).
- Write clear, convincing prose, and understand the basics of proper formatting and documentation for scholarly prose.

CHIN 344 : Chinese Literature in Translation--Prose. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: All readings in English; topics vary.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Acquire and apply knowledge of literary terminology and frameworks for literary analysis (see Chinese major expected learning outcome 3).
- Analyze and discuss classical and modern Chinese narrative literature and its relations to Chinese cultural traditions (see Chinese major expected learning outcome 3).

- Write coherently and cohesively in English.

CHIN 345R : Chinese Culture. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Selected topics in traditional, modern, and contemporary Chinese culture.

**Course Outcomes**

- Demonstrate cultural literacy of the foundations of Chinese civilization: geography, history, philosophy, thought, political systems and social structures (see Chinese major expected learning outcome 3).
- Explain how cultural factors and institutions have shaped and continue to shape allied disciplines in Chinese studies including language, literature, linguistics, and the visual arts (see Chinese major expected learning outcome 3).
- Write coherently and cohesively in English.

CHIN 346 : Introduction to Chinese Philosophy. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction to native Chinese philosophies of Confucianism and Taoism. Readings in translation of *Lun-yu, Meng-tsu, Lao-tzu,* and *Chuang-tzu.* Themes include self, society, and cosmos.

**Course Outcomes**

- Summarize the important facts, figures, and dates relevant to early Chinese philosophy (see Chinese major expected learning outcome 3).
- Explain the broad outlines of the major schools of Confucianism, Mohism, Daoism, and Legalism, and understand their roles in the development of Chinese society and thought (see Chinese major expected learning outcome 3).
- Formulate philosophical questions.
- Write clear, convincing prose, and understand the basics of proper formatting and documentation for scholarly prose.

CHIN 441 : Classical and Literary Chinese. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Chin 301 or equivalent.

DESCRIPTION: Introduction to syntax and stylistic patterns.

**Course Outcomes**

- Explain the use of the common grammatical particles and patterns essential in mastering the intricacies and subtleties of "classical" Chinese prose (see Chinese major expected learning outcome 3).
- Discuss and apply the meanings and usages of the standard vocabulary of classical Chinese (see Chinese major expected learning outcome 3).
- Summarize the thought of each important early thinker (see Chinese major expected learning outcome 3).

CHIN 442 : Classical and Literary Chinese. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHIN 441

DESCRIPTION: Introduction to syntax and stylistic patterns.

**Course Outcomes**

- Read, analyze, and discuss documentary Chinese prose (see Chinese major expected learning outcome 3).
- Compare and contrast the literary craftsmanship exhibited by the writers of documentary Chinese and discuss traditional Chinese history, literature, and religion (see Chinese major expected learning outcome 3).
- Explain the use of the basic grammatical particles introduced in Chin 441, learn some more advanced ones, and practice using them in new contexts (see Chinese major expected learning outcome 3).

CHIN 443 : Modern Chinese Literature. (3:3:0)

PREREQUISITE: Chin 321 or 322.

DESCRIPTION: Authors, themes, and writing styles of the period 1915--1949. Texts in Chinese.

**Course Outcomes**

- Read, analyze, and discuss Chinese literary texts from the modern (1900-1949) period in Chinese (see Chinese major expected learning outcomes 2 and 3).
- Discuss modern Chinese literary texts in Chinese with fluency and increasing sophistication, demonstrating facility for expressing subjective judgments on literature and other abstract topics in Chinese (see Chinese major expected learning outcomes 1-3).
- Analyze and discuss modern Chinese literary genres, works and authors in their social, historical, and religious contexts (see Chinese major expected learning outcome 3).

CHIN 444 : Contemporary Chinese Literature. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Chin 321 or 322.

DESCRIPTION: Contemporary literature of Taiwan and the PRC. Texts in Chinese.

**Course Outcomes**

- Read, analyze, and write about Chinese literary texts from the contemporary (1949-present) period in

Chinese (see Chinese major expected learning outcomes 2 and 3).
- Discuss contemporary Chinese literary texts in Chinese with fluency and increasing sophistication, demonstrating facility for expressing subjective judgments on literature and other abstract topics in Chinese (see Chinese major expected learning outcomes 1 and 3).
- Analyze and discuss contemporary Chinese literary genres, works and authors in their social, historical, and religious contexts (see Chinese major expected learning outcome 3).

CHIN 445R : Chinese Poetry. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: CHIN 343 & CHIN 441

DESCRIPTION: Readings in Chinese poetry. Topics vary from classical and modern poetry. Various themes and genres introduced, emphasizing shi poetry. Texts in Chinese.

**Course Outcomes**

There are no course outcomes available

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOG 273 : Southeast Asia. (3:3.0:0)

WHEN TAUGHT: Fall Contact Department

DESCRIPTION: Fundamental issues of geography relating to Southeast Asia, including the extraction and marketing of natural resources, economic development, neighborly relations, and how diffusion has influenced the unique cultural, religious, and linguistic characteristics of the region.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

HIST 337 : Pre-modern Korea. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, economic, and social history of Korea from antiquity to 1850.

**Course Outcomes**

- An understanding of the major features of Korean history and culture both in breadth and in depth.
- An understanding of Korean history contextualized both within the framework of Korean history and in relationship to other histories and other constructions of history.
- The ability to think and write about issues in Korean history in a critical and compelling manner.

HIST 338 : Modern Korea. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, and social history of Korea from 1850 to the present.

**Course Outcomes**

- Students will be able to describe the most significant aspects of the polity, economy, society and ideology of Korea from 1850 to the present.
- Students will be able to recognize and analyze change over time in East Asia
- Students will be able to evaluate and apply primary source texts to broad historical themes
- Students will be able to conduct individual research and situate it in the broader historical context

HIST 340 : Traditional China. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: From a loose federation of Neolithic societies, Chinese civilization emerges as East Asia's dominant political and cultural force; developments to ca. 1500.

**Course Outcomes**

- Students will be able to explain and analyze the major social, political, economic, intellectual and cultural developments in the history of Early China (ca. 5000 BC–220 AD
- Students will demonstrate a basic geographical knowledge of China, including significant geological features and major historical cities Moreover, they will be able to discuss how geographical and environmental realities have impacted historical development.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve.

HIST 341 : China Since 1200. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Economic and political foundations of modernity during high Imperial China; challenge of new order from the West; rise of Chinese nationalism, revolution, and development to the present.

**Course Outcomes**

There are no course outcomes available

HIST 343 : Traditional Japan. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, social, religious, and cultural developments to ca. 1700.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history until around 1600.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 344 : Modern Japan. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Main themes in Japanese history from Tokugawa times to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history from approximately 1600 to the present.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 347 : Chinese Cultural History. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Methods and approaches of the cultural historian; in-depth investigation of a selected topic in Chinese cultural history. Topics may include women, Silk Roads, material culture, etc.

**Course Outcomes**

- Students will be able to explain and understand the methods and approaches of the cultural historian through an investigation of select topics in Chinese cultural history.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve

HIST 348 : Modern South East Asia. (3:3:0)

DESCRIPTION: Complex history of the varied nations of this vast area: religion, colonialism, nationalism, independence.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in South East Asia and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.

HIST 349 : History of Asian Religions and Thought. (3:3:0)

DESCRIPTION: Major themes in religion, philosophy, and ideas in Asia.

**Course Outcomes**

- Students will be able to understand and analyze key concepts in Chinese thought and religion as well as the logic behind core beliefs and practices
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions.

JAPAN 321 : Reading Modern Documentary Styles. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern documentary styles, emphasizing reading comprehension, grammar, and vocabulary building.

**Course Outcomes**

- Students will increase their ability to understand vocabulary commonly used in newspapers
- Students will be able to read a range of types of news articles (politics, business, human interest, sports, etc.)
- Students will be able to compare and contrast print and television news reports. A written sample will be included in the individual student portfolio. The student portfolio will be formally reviewed at the conclusion of this course.

JAPAN 322 : Reading Modern Short Fiction. (3:3:0)

PREREQUISITE: Japan 302 or equivalent.

DESCRIPTION: Readings in modern short fiction, emphasizing grammar, reading comprehension, vocabulary building, and stylistic analysis.

**Course Outcomes**

- Students will be able to use a variety of dictionary sources that will enable them to read and comprehend modern Japanese prose
- Students will be able to recognize a majority of standard-usage kanji and identify various readings for the characters
- Students will be able to analyze and discuss a variety of modern Japanese literary texts at an intermediate level in the target language. A writing sample will be included in the individual student portfolio.

JAPAN 345 : Traditional Japanese Culture. (3:3:0)

WHEN TAUGHT: Winter; Spring Contact Department

DESCRIPTION: General survey emphasizing aesthetics, religion, and value systems. All readings in English.

**Course Outcomes**

- Students will be able to speak and write about such features of culture as language, literature, thought, religion, aesthetics, art and music. A writing sample will be included in the individual student portfolio.

JAPAN 350 : Japanese Literature in Translation--Eighth Through Sixteenth Centuries. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 700 through 1600 (Nara, Heian, and medieval periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of premodern literature in verbal and written forms. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their knowledge and understanding of major works and genres in verbal and written forms.

JAPAN 351 : Japanese Literature in Translation--Seventeenth Through Nineteenth Centuries. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 1600 through 1900 (Edo and Meiji periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of early modern Japanese literature orally and in writing. A writing sample will be included in individual student portfolio.
- Students will demonstrate their understanding of key literary works and genres in early modern Japanese literature in verbal and written forms.

JAPAN 352 : Japanese Literature in Translation: The Modern Era. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from Meiji period to the present.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of human aspects in works of modern Japanese literature orally and in writing. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their ability to analyze key works and genres in modern Japanese literature in oral and written form.

JAPAN 441 : Introduction to Classical Japanese. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: JAPAN 321 & JAPAN 322

DESCRIPTION: Reading of premodern texts, emphasizing grammar and syntax, and showing differences from and influences on the modern idiom.

**Course Outcomes**

- Students will be able to analyze and discuss the influence of the pre-modern language on present-day

Japanese.
- Students will read and analyze the content and linguistic features of important premodern literary texts. A writing sample will be included in the individual student portfolio.

JAPAN 444 : Reading Modern Japan. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Japan 321, 322; or equivalents.

DESCRIPTION: Fictional texts from major twentieth-century authors. Texts primarily in Japanese.

**Course Outcomes**

- Students will demonstrate their ability to read and interpret modern literary texts with sophistication in both oral and written forms. A writing sample will be included in the individual student portfolio.

KOREA 321 : Selected Readings of Modern Korean. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Korea 301 or equivalent.

DESCRIPTION: Mixed script (with hanja) and other readings from modern documentary and literary texts, emphasizing comprehension, grammar, and vocabulary building.

**Course Outcomes**

- students will develop skills in reading advanced level texts in literature and social sciences.

KOREA 340 : Korean Literature to 1900. (3:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: KOREA 302

DESCRIPTION: Korean literature from the earliest times to 1900. Emphasis on basic literary concepts.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will learn of the wide range of literary genre available in Korea prior to the 20th century.
- Students will learn at least five styles of poetry common in Korea from the Silla period to the late Joseon period, including hyangga, Chinese (Tang) poetry, sijo, gasa, and the poetry of the Yongbi-eo cheon'ga.
- Fiction, in the form of tales, legends, fables, and uniquely Korean "pansori" novels will become familiar to students in this course.

KOREA 345 : Korean Culture. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Selected topics in traditional, modern, and contemporary Korean culture. All readings in English.

**Course Outcomes**

- -- become familiar with the historical framework of Korea, the major dynasties and historic events.-- become familiar with major religions including shamanism, Buddhism, Confucianism, and Christianity as well as some "new religions".-- learn basic concepts of lineage and family structure, organization and activities, including ancestor veneration ceremonies.-- learn the political structure of South Korea and North Korea

KOREA 441 : Classical Korean (Hanmun). (3:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: KOREA 321; or CHIN 441

DESCRIPTION: Reading of premodern, documentary Sino-Korean texts, including genealogy records and the Chosŏn Dynasty Annals.

**Course Outcomes**

- Students will learn to read academic journals articles, reference works, genealogies, and other primary source documents, all of which contain Sino-Korean vocabulary.This course will assist students who work for the government or need to take advanced proficiency test to do well and excel on such tests in their future professions.

KOREA 443 : Korean Literature after 1900. (3:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: KOREA 302

DESCRIPTION: Literary texts from major post-1900 authors, in Korean, emphasizing reading, translating, and criticism.

**Course Outcomes**

- Students will learn of the poetry, short stories and novels of the 20th and 21st centuries.Major literature from Korea before the division in 1945, and post-division in South Korea (with a little readings of North Korean literature) will be covered.

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Non-music major status.
DESCRIPTION: Traditional music of selected cultures of Asia, Oceania, Africa, Europe, and the Americas, including both folk and art music traditions.
NOTE: For non-music majors. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will recognize the diversity of aesthetic values among the world's cultures.
- Students will understand and appreciate cultural traditions outside of their own.
- Students will transcend natural tendencies towards ethnocentricity.
- Students will discover the various ways in which the arts can express values and devotion.

MUSIC 336R : Balinese Gamelan. (1:2:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Playing and performing on the Balinese gamelan (percussion) instruments.

**Course Outcomes**

- Students participating in Gamelan will learn the mental and technical skills required to memorize and perform works from the traditional Balinese gamelan repertoire, including becoming proficient on one or more of the instruments in the ensemble.
- Students will also use music as a window into the relationship between Balinese musical practice and Balinese social and religious culture, and, more broadly, develop a deep appreciation for this musicâ s profound contribution to the life experience.
- In the spirit of BYUâ s global mission and the breadth of educational experience advocated in BYUâ s guiding documents, successful students in gamelan will develop a greater understanding of and respect for music and traditions outside of their native experience. This respect will better prepare them to represent BYU and the Church in an increasingly interconnected global society.

POLI 348 : Government and Politics of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

(cannot be double counted with item 5 above)
POLI 353 : China: Government and Politics. (3:3:0)
DESCRIPTION: Structure and behavior of politics; contemporary problems.

**Course Outcomes**

There are no course outcomes available

POLI 354 : Japan: Government and Politics. (3:3:0)
DESCRIPTION: Structure and behavior of politics; contemporary problems.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

(cannot be double counted with item 5 above)
POLI 386 : Japanese Foreign Policy. (3:3:0)
DESCRIPTION: Process and outcomes of Japan's foreign policy; analysis of its relations with other nations in a historical and contemporary setting.

**Course Outcomes**

There are no course outcomes available

POLI 388 : Chinese Foreign Policy. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Structure and process of foreign policy of the People's Republic of China.

**Course Outcomes**

There are no course outcomes available

REL C 351 : Survey of World Religions. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Explores the origins, theological doctrines, scriptural works, and religious practices of several internationally religious traditions, including Christianity, Islam, Judaism, Hinduism, Sikhism, Buddhism, Taoism, Confucianism, and Shinto. Comparisions are offered between these religions, and Latter-day Saints belief and practice.

**Course Outcomes**

There are no course outcomes available

: Honors Survey of World Religions.

**Course Outcomes**

Other electives: If approved beforehand, up to 9 hours of 330R or 399R credit may be counted for overseas work done under one of the following: Study Abroad, internships, mentored research, or independent field studies.

*Hours include courses that may fulfill university core requirements.

- Students will be able to interpret and discuss the meaning and significance of historical events on contemporary identity and foreign relations.
- Students will be able to analyze historical arguments.

2. Complete one of the following tracks:

*China Track*

- Complete the following prerequisite courses (or equivalent experience):

CHIN 101 : Beginning Mandarin. (4:5:2)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Basic grammar, vocabulary building, speaking.

**Course Outcomes**
There are no course outcomes available

CHIN 102 : Beginning Mandarin. (4:5:2)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Chin 101 or equivalent.
DESCRIPTION: Continuation of Chin 101.

**Course Outcomes**
- Listen to conversations, dialogs, and live interaction at the ACTFL novice high level. (See Chinese major learning outcome 1).
- Speak and understand Mandarin Chinese at the ACTFL novice high level. (See Chinese major learning outcome 1).
- Write short paragraphs, notes, and similar texts at the ACTFL novice mid level. (See Chinese major learning outcome 2).
- Demonstrate a basic understanding of a variety of Chinese cultural practices and communicative conventions. (See Chinese major learning outcome 3)

CHIN 201 : Intermediate Mandarin. (4:5:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chin 102.
DESCRIPTION: Advanced grammar, the writing system, reading and writing, speaking.

**Course Outcomes**
- Speak and understand Mandarin Chinese at the ACTFL intermediate low level. (See Chinese major learning outcome 1)
- Understand conversations and dialogs at the ACTFL intermediate low level. (See Chinese major learning outcome 1)
- Write short essays, journal entries, and notes at the ACTFL novice mid level. (See Chinese major learning outcome 2)
- Demonstrate an introductory level understanding of Chinese cultural practices. (See Chinese major learning outcome 3)

CHIN 202 : Intermediate Mandarin. (4:5:1)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Chin 201.
DESCRIPTION: Advanced grammar, the writing system, reading and writing, speaking.

**Course Outcomes**

- Speak and understand Mandarin Chinese at the ACTFL intermediate mid level. (See Chinese major learning outcome 1)
- Understand conversations and dialogs at the ACTFL intermediate mid level. (See Chinese major learning outcome 1)
- Write short essays, journal entries, and notes at the ACTFL novice high level. (See Chinese major learning outcome 2)
- Demonstrate a fundamental understanding of Chinese social practices as well as linguistically and culturally appropriate behavior. (See Chinese major learning outcome 3)

- Complete three courses from the following (**Note:** Only one course per discipline area will count toward the minor):

ANTHR 343 : Chinese Culture and Society. (3:3:0)

WHEN TAUGHT: Fall; Winter Odd Yrs.
DESCRIPTION: Cultural and social institutions of traditional and modern China, including mainland China, Taiwan, Hong Kong, or other areas of Chinese impact.

- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve.

HIST 341 : China Since 1200. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Economic and political foundations of modernity during high Imperial China; challenge of new order from the West; rise of Chinese nationalism, revolution, and development to the present.

**Course Outcomes**

There are no course outcomes available

HIST 347 : Chinese Cultural History. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Methods and approaches of the cultural historian; in-depth investigation of a selected topic in Chinese cultural history. Topics may include women, Silk Roads, material culture, etc.

**Course Outcomes**

- Students will be able to explain and understand the methods and approaches of the cultural historian through an investigation of select topics in Chinese cultural history.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve

POLI 353 : China: Government and Politics. (3:3:0)

DESCRIPTION: Structure and behavior of politics; contemporary problems.

**Course Outcomes**

There are no course outcomes available

POLI 388 : Chinese Foreign Policy. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Structure and process of foreign policy of the People's Republic of China.

**Course Outcomes**

There are no course outcomes available

**Note:** Study Abroad/Internship credit is also applicable with prior approval from the Asian

Studies coordinator.

*Japan Track*

- Complete the following prerequisite courses (or equivalent experience):

JAPAN 101 : First-Year Japanese. (4:5:1)

WHEN TAUGHT: Fall; Winter; Summer Contact Department

DESCRIPTION: Writing systems, grammar and vocabulary-building fundamentals, basic conversation and reading.

**Course Outcomes**

- Students will be able to read and write hiragana and katakana. A writing sample will be included in the individual student portfolio.
- Students will be able to ask and give directions
- Students will be able to discuss schedules and itineraries

JAPAN 102 : First-Year Japanese. (4:5:1)

WHEN TAUGHT: Fall; Winter; Summer Contact Department

PREREQUISITE: Japan 101, or equivalent.

DESCRIPTION: Writing systems, grammar and vocabulary-building fundamentals, basic conversation and reading. Includes introduction to Chinese characters.

**Course Outcomes**

- Students will be able to make social introductions covering various levels of formality and honorifics
- Students will be able to read and write simple texts based on 200 elementary kanji characters. A written sample will be included in the individual student portfolio.
- Students will be able to make comparisons

JAPAN 201 : Second-Year Japanese. (4:5:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Japan 102 or equivalent.

DESCRIPTION: Further practice in conversation; basic reading and writing skills.

**Course Outcomes**

- Students will be able to recognize and produce approximately 400 kanji characters with their readings and meanings. A written sample will be included in the individual student portfolio.
- Students will be able to describe and model proper etiquette when visiting a home, making hotel reservations, talking about the weather, clothing terms, etc. They will be able to use verbals of giving and receiving; compare activities; use different patterns of reporting information; and employ embedded questions.

JAPAN 202 : Second-Year Japanese. (4:5:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Japan 201 or equivalent.

DESCRIPTION: Further practice in conversation, reading, and writing; introducing culture through short stories, articles.

NOTE: Not for returned missionaries. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will be able to recognize and use an additional 150 kanji characters in context. A written sample will be included in the individual student portfolio.
- Students will interact appropriately in vertical society situations, using proper levels of honorific language.

- Complete three courses from the following (**Note:** Only one course per discipline area will count toward the minor):

ANTHR 348 : Contemporary Japan. (3:3:0)

DESCRIPTION: Using movies and popular media to examine the social structures and family life dynamics of contemporary Japan.

**Course Outcomes**

There are no course outcomes available

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

HIST 343 : Traditional Japan. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, social, religious, and cultural developments to ca. 1700.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history until around 1600.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 344 : Modern Japan. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Main themes in Japanese history from Tokugawa times to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history from approximately 1600 to the present.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

JAPAN 345 : Traditional Japanese Culture. (3:3:0)

WHEN TAUGHT: Winter; Spring Contact Department

DESCRIPTION: General survey emphasizing aesthetics, religion, and value systems. All readings in English.

**Course Outcomes**

- Students will be able to speak and write about such features of culture as language, literature, thought, religion, aesthetics, art and music. A writing sample will be included in the individual student portfolio.

JAPAN 350 : Japanese Literature in Translation--Eighth Through Sixteenth Centuries. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 700 through 1600 (Nara, Heian, and medieval periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of premodern literature in verbal and written forms. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their knowledge and understanding of major works and genres in verbal and written forms.

JAPAN 351 : Japanese Literature in Translation--Seventeenth Through Nineteenth Centuries. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from 1600 through 1900 (Edo and Meiji periods).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of the human aspects of early modern Japanese literature orally and in writing. A writing sample will be included in individual student portfolio.
- Students will demonstrate their understanding of key literary works and genres in early modern Japanese literature in verbal and written forms.

JAPAN 352 : Japanese Literature in Translation: The Modern Era. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Reading and discussing selected topics in Japanese literature (narrative, lyric, drama) from Meiji period to the present.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate their understanding of human aspects in works of modern

Japanese literature orally and in writing. A writing sample will be included in the individual student portfolio.
- Students will demonstrate their ability to analyze key works and genres in modern Japanese literature in oral and written form.

JAPAN 390 : Japanese for Special Purposes. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Japan 321 or equivalent.

DESCRIPTION: Readings, video materials, discussions, and projects in content areas related specifically to business, science, and technology.

**Course Outcomes**

- Students will gain proficiency in analyzing and discussing, in Japanese, important aspects of the business environment in Japan as compared to that in America.
- Students will acquire and be able to use specialized vocabulary in Japanese relating to their fields of interest.

POLI 354 : Japan: Government and Politics. (3:3:0)

DESCRIPTION: Structure and behavior of politics; contemporary problems.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 386 : Japanese Foreign Policy. (3:3:0)

DESCRIPTION: Process and outcomes of Japan's foreign policy; analysis of its relations with other nations in a historical and contemporary setting.

**Course Outcomes**

There are no course outcomes available

**Note:** Study Abroad/Internship credit is also applicable with prior approval from the Asian Studies coordinator.

*Korea Track*

- Complete the following prerequisite courses (or equivalent experience):

KOREA 101 : First-Year Korean 1. (4:5:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Han'gul, the phonetic system, basic grammar and vocabulary, discourse, reading, and culture.

**Course Outcomes**

There are no course outcomes available

KOREA 102 : First-Year Korean 2. (4:5:0)

WHEN TAUGHT: Winter

PREREQUISITE: Korea 101 or equivalent.

DESCRIPTION: Continuation of Korea 101. Phonetic system, basic grammar, vocabulary, discourse, reading, and culture.

**Course Outcomes**

- Students will be able to;1. Comprehend basic reading material2. Use low language in addition to middle and high language3. Use expanded grammar and vocabulary in speech ACTFL 1

KOREA 201 : Second-Year Korean 1. (4:5:0)

WHEN TAUGHT: Fall

PREREQUISITE: Korea 102 or equivalent.

DESCRIPTION: Further practice in discourse and basic reading and writing skills; culture.

**Course Outcomes**

- Students will be able to;Speak somewhat comfortably in everyday situations with peers and acquaintances.Read and write basic Korean (with grammatical and spelling mistakes).Translate from basic Korean to English and English to KoreanGrasp Korean surface and deep culture

KOREA 202 : Second-Year Korean 2. (4:5:0)

WHEN TAUGHT: Winter

PREREQUISITE: Korea 201 or equivalent.

DESCRIPTION: Continuation of Korea 201. Conversation, basic reading and writing skills, culture.

Introduction to Chinese characters.

NOTE: Not for returned missionaries. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- 1. Speak and understand Korean at an ACTFL 2
- 2. Read and understand modified or early intermediate level readings
- 3. Recognize basic hanja
- 4. Write in Korean without major spelling or grammatical mistakes

- Complete three courses from the following (**Note:** Only one course per discipline area will count toward the minor):

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

HIST 337 : Pre-modern Korea. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, economic, and social history of Korea from antiquity to 1850.

**Course Outcomes**

- An understanding of the major features of Korean history and culture both in breadth and in depth.
- An understanding of Korean history contextualized both within the framework of Korean history and in relationship to other histories and other constructions of history.
- The ability to think and write about issues in Korean history in a critical and compelling manner.

HIST 338 : Modern Korea. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, and social history of Korea from 1850 to the present.

- Students will be able to describe the most significant aspects of the polity, economy, society and ideology of Korea from 1850 to the present.
- Students will be able to recognize and analyze change over time in East Asia
- Students will be able to evaluate and apply primary source texts to broad historical themes
- Students will be able to conduct individual research and situate it in the broader historical context

KOREA 345 : Korean Culture. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Selected topics in traditional, modern, and contemporary Korean culture. All readings in English.

**Course Outcomes**

- -- become familiar with the historical framework of Korea, the major dynasties and historic events.-- become familiar with major religions including shamanism, Buddhism, Confucianism, and Christianity as well as some "new religions".-- learn basic concepts of lineage and family structure, organization and activities, including ancestor veneration ceremonies.-- learn the political structure of South Korea and North Korea

POLI 348 : Government and Politics of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

**Note:** Study Abroad/Internship credit is also applicable with prior approval from the Asian Studies coordinator.

*Pan Asia Track*

- Complete 8 hours of a single Asian language (excluding Mandarin, Japanese, and Korean).
- Complete three courses from the following (**Note:** Only one course per discipline area will count toward the minor, and it should coincide with the language choice if possible):

ANTHR 335 : Peoples of India. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Society and culture on the Indian subcontinent. Stratification, kinship, marriage, religion, politics, economics.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will be provided an overview of the peoples and cultures of South Asia with an emphasis on India; a region consisting of several hundred languages, multiple ethnicities, many religious traditions, and competing political orientations.
- Students will receive increased knowledge of the cultures of India through in-depth readings, lectures, discussions, and films.
- Students will increase their capacity for critical thinking skills and writing within the discipline through discussions, exams, and a written research papers.

ANTHR 336 : Cinema and Culture in India. (3:3:0)

WHEN TAUGHT: Spring

DESCRIPTION: Anthropology of film in India; the world's largest film industry. Indian cultural and linguistic diversity. How different film genres reflect, distort, or utilize Indian cultural diversity. Evidences in the film work of Satyajit Ray.

**Course Outcomes**

There are no course outcomes available

ASIAN 342 : Asian Literary Traditions. (3:3:0)

DESCRIPTION: Comparative analysis of Asian literary works spanning several traditions.

**Course Outcomes**

- Apply basic concepts of comparative literary analysis to course texts.
- Gain familiarity with Asian literary traditions, particularly India, China, and Japan.
- Demonstrate strong critical reading, writing, and analytical skills across linguistic and national traditions.

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOG 273 : Southeast Asia. (3:3.0:0)

WHEN TAUGHT: Fall Contact Department

DESCRIPTION: Fundamental issues of geography relating to Southeast Asia, including the extraction and marketing of natural resources, economic development, neighborly relations, and how diffusion has influenced the unique cultural, religious, and linguistic characteristics of the region.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

HIST 337 : Pre-modern Korea. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, economic, and social history of Korea from antiquity to 1850.

**Course Outcomes**

- An understanding of the major features of Korean history and culture both in breadth and in depth.
- An understanding of Korean history contextualized both within the framework of Korean history and in relationship to other histories and other constructions of history.
- The ability to think and write about issues in Korean history in a critical and compelling manner.

HIST 338 : Modern Korea. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, and social history of Korea from 1850 to the present.

**Course Outcomes**

- Students will be able to describe the most significant aspects of the polity, economy, society and ideology of Korea from 1850 to the present.
- Students will be able to recognize and analyze change over time in East Asia
- Students will be able to evaluate and apply primary source texts to broad historical themes
- Students will be able to conduct individual research and situate it in the broader historical context

HIST 340 : Traditional China. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: From a loose federation of Neolithic societies, Chinese civilization emerges as East Asia's dominant political and cultural force; developments to ca. 1500.

**Course Outcomes**

- Students will be able to explain and analyze the major social, political, economic, intellectual and cultural developments in the history of Early China (ca. 5000 BC–220 AD
- Students will demonstrate a basic geographical knowledge of China, including significant geological features and major historical cities Moreover, they will be able to discuss how geographical and environmental realities have impacted historical development.
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions
- Students ability to identify arguments (assertions, claims, theses) and analyze supporting evidence in secondary scholarship should improve.

HIST 341 : China Since 1200. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Economic and political foundations of modernity during high Imperial China; challenge of new order from the West; rise of Chinese nationalism, revolution, and development to the present.

**Course Outcomes**

There are no course outcomes available

HIST 343 : Traditional Japan. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, social, religious, and cultural developments to ca. 1700.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history until around 1600.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 344 : Modern Japan. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Main themes in Japanese history from Tokugawa times to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history from approximately 1600 to the present.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 348 : Modern South East Asia. (3:3:0)

DESCRIPTION: Complex history of the varied nations of this vast area: religion, colonialism, nationalism, independence.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in South East Asia and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.

HIST 349 : History of Asian Religions and Thought. (3:3:0)

DESCRIPTION: Major themes in religion, philosophy, and ideas in Asia.

**Course Outcomes**

- Students will be able to understand and analyze key concepts in Chinese thought and religion as well as the logic behind core beliefs and practices
- Students will be able to analyze and interpret primary source documents, both in writing and in class discussions.

IHUM 240 : Introduction to the Humanities of Asia. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Major arts of Asian cultures in their historical, religious, and philosophical settings.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 348 : Government and Politics of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

**Note:** Study Abroad/Internship credit is also applicable with prior approval from the Asian Studies coordinator.

*Hours include courses that may fulfill university core requirements.

## Undergraduate Courses

### 200-Level Courses

ASIAN 200 : Introduction to Asian Studies: Methods and Materials. (3:3:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Sources, materials, and methods of research and writing; critical analysis of research project.
NOTE: Required of all Asian Studies majors early in the program.

**Course Outcomes**

- The student can identify countries and major geographic features of Asia on a map. The student can relate basic facts about the history, economics, politics, society and cultures of the countries of Asia.
- The student will be able to apply effective search strategies to locate and to evaluate information on Asia in all formats (print, electronic, microform, video, DVD) and of all types (books, articles, reference materials, etc.). The student will be able to employ proper research skills to carry out research on a topic related to Asia and present results in oral and written academic reports.

### 300-Level Courses

ASIAN 330R : Asian Studies Abroad. (.5-5:ARR:ARR)

DESCRIPTION: Preparatory course approved for Asian Seminar (Study Abroad).

**Course Outcomes**

There are no course outcomes available

ASIAN 342 : Asian Literary Traditions. (3:3:0)

DESCRIPTION: Comparative analysis of Asian literary works spanning several traditions.

**Course Outcomes**

- Apply basic concepts of comparative literary analysis to course texts.
- Gain familiarity with Asian literary traditions, particularly India, China, and Japan.
- Demonstrate strong critical reading, writing, and analytical skills across linguistic and national traditions.

### 400-Level Courses

ASIAN 495 : Senior Seminar. (1:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Senior status or program coordinator's consent.
DESCRIPTION: Learning research and writing skills necessary to prepare and present major senior research paper.
NOTE: Most all major requirements should be completed before registering for this course.

**Course Outcomes**

- In this course, you will learn how to complete a significant research project using appropriate methods of research, analysis, and a professional standard of writing. In doing so, you will draw heavily from your knowledge from previous courses.
- You will do this by studying a specialized topic in Asian Studies under the guidance of a professor. Thus, you will deepen your familiarity with a sub-field within Asian Studies and Asian Studies more broadly.
- You will also learn how to present your findings in a high-quality oral presentation, and how to give and receive appropriate feedback within a community of scholars.

## 500-Level Graduate Courses (available to advanced undergraduates)

ASIAN 501R : Intensive Introduction to Asian Studies for Teachers and Prospective Teachers. (.5-3:ARR:0)

DESCRIPTION: Readings, lectures, individual study, and curriculum development; integration for school teachers of Asian Studies into the curriculum of social studies, world history, and geography.

# European Studies

## The Discipline

European Studies is an interdisciplinary field that focuses on Europe's rich cultural history and its ongoing contributions to the modern world. Scholars in the field come from across the university, researching everything from medieval art and literature to twenty-first-century politics nad economics. European Studies majors primarily take courses in the humantiies and social sciences, developing strong foreign language skills and a deep understanding of European history, culture and current affairs.

## Career Opportunities

A bachelor's degree in European Studies can lead to a wide range of fulfilling careers. Recent graduates from BYU's program have found employment in areas such as diplomacy, business, and higher education. The major also provides excellent preparation for graduate studies in international business, law, medicine, journalism, history, and literature.

## Program Requirements | View MAP

1. Complete the GE Languages of Learning requirement in a European language.
2. Complete the following:

   EUROP 200 : Introduction to European Studies. (3:3:0)
   WHEN TAUGHT: Fall
   DESCRIPTION: Introduction to the major, the core disciplines involved and integrated in European studies, and European studies as a discipline.

   **Course Outcomes**
   - Students will gain a basic understanding of the definition, history, and purpose of European Studies.
   - Students will become familiar with the major disciplines involved with European Studies and be able to define -- and know when to engage -- various disciplinary methods.
   - Students will gain an understanding of many of the major topics and issues of European Studies.
   - Students will develop some ideas about how to orient their subsequent studies within the major.
   - Students willdevelop the habit of reading international news in order to keep abreast of European affairs and to cross-check perspectives from country to country.
   - Students willlearn how to locate, use, and cite high-quality and reliable resources from the library and online and use that research in the creation of a substantive research paper.

3. Complete the following history requirement:
   - Complete the following:

     HIST 250 : Europe 1500 to the Present. (3:3:0)
     WHEN TAUGHT: Fall Even Yrs.
     RECOMMENDED: WRTG 150.
     DESCRIPTION: Overview of key political, cultural, economic and social developments in Europe during the early modern and modern periods, 1500—Present.

     **Course Outcomes**
     There are no course outcomes available

   - Complete three courses from the following:

     CL CV 304 : (Cl Cv-Hist 247) Greek History. (3:3:0)
     WHEN TAUGHT: Winter
     DESCRIPTION: Political, economic, social, and intellectual history of Greece from Mycenaean times to the Hellenistic period.

     **Course Outcomes**
     There are no course outcomes available

     CL CV 307 : (ClCv-Hist 248) Roman History. (3:3:0)
     WHEN TAUGHT: Fall
     DESCRIPTION: Political, economic, social, and intellectual history of Rome from the foundation of the city to Constantine.

     **Course Outcomes**
     There are no course outcomes available

     HIST 232 : Introduction to the History of Christianity. (3:3:0)
     WHEN TAUGHT: Fall Odd Yrs.
     DESCRIPTION: Survey of major developments in Christianity from its origins in the ancient Roman Empire to its global presence today.

**Course Outcomes**

There are no course outcomes available

HIST 300 : The Early Middle Ages. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Decline of Rome and the early formative stages of early medieval civilization; analysis of political, economic, and social changes from A.D. 285 to 950.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in the Early Middle Ages.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers

HIST 301 : The Late Middle Ages. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Europe from 950 to 1350; maturation of medieval civilization; failure of German, success of French leadership; economic, religious, cultural, intellectual trends.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in the Late Middle Ages.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers

HIST 302 : The Italian Renaissance. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Major political, social, and cultural events in Italy from 1200 to 1530, emphasizing concept of the Renaissance in modern historiography.

**Course Outcomes**

- Students will understand and be able to analyze the major political, economic, social, and religious developments in Italian Renaissance history
- Students will be able to trace the historiographical evolution of the Italian Renaissance and analyze historical questions within this historiographical context
- Students will refine and improve historical research, writing and analytical skills

HIST 303 : The Reformation: Age of Turmoil. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Sixteenth-century religious upheaval; ideological, cultural, political, and socioeconomic struggles to mid-seventeenth century.

**Course Outcomes**

- Students will be able to explain and analyze the major religious developments in Europe during the Reformation (1500-1700).
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze and interpret secondary source documents
- Students will be able to interpret and debate the meanings and historical value of primary and secondary source texts with their peers.
- Students will be able to analyze historical questions and place them in a historiographical context.

HIST 304 : The Expansion of Europe, 1400-1800. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Early voyages of discovery and the actions of Europeans in the wider world from about 1400 to 1800.

**Course Outcomes**

There are no course outcomes available

HIST 305 : The Age of Enlightenment. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Developments in Europe from 1650 to the French Revolution, emphasizing political thought, science, and philosophy in the Enlightenment.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, intellectual, and

cultural developments in Europe between 1650 and 1815.
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills
- Students will analyze historical questions and place them in historiographical context
- Students will understand the ideas central to the Enlightenment.

HIST 306 : Nineteenth-Century Europe. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, social, and intellectual history of Europe from 1815 to 1914.

**Course Outcomes**

- Students will understand and be able to explain and analyze the international affairs and the political, intellectual, social, and economic history of Europe from 1815-1914
- Students will understand how to use and will be able to analyze and interpret primary source documents.
- Students will be able to review, critique, and evaluate historiographical works from a variety of European nations, as well as analyze historical questions and place them in a historiographical context.
- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts.

HIST 307 : Europe Since 1914. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: International affairs and political and economic history of major European countries (including Russia) from World War I to the present.

**Course Outcomes**

- Students will understand and be able to explain and analyze the international affairs and the political, cultural, military, social, and economic history of Europe from the two world wars until the present
- Students will understand how to use and will be able to analyze and interpret primary source documents.
- Students will be able to review, critique, and evaluate historiographical works.
- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to analyze and discuss current events from more than one national viewpoint.

EUROP 336R : European Studies. (.5-6:ARR:ARR)

DESCRIPTION: Social sciences core course approved for Study Abroad programs in London, Vienna, Paris, and other locations.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate a sound, general understanding of the historical development of modern Britain. Students will be familiar with all major historical periods: pre-Roman, Roman, Anglo-Saxon, Norman/medieval, Tudors/Enlightenment, Stuarts/civil war/revolution, Hanoverian/Georgian, Victorian/imperial, 20th century/world wars/postwar. But not all periods will be covered equally, and different classes will have different emphases.
- Students will demonstrate the ability accurately and intelligently to discuss how historical sites in London and throughout Britain relate to key historical developments in British history. Site visits will be directly tied to class discussions and writing assignments.
- Students will demonstrate a general understanding of how the history of Britain is reflected in other elements of the study abroad experience, such as literature and humanities course work, museum visits, performances, and visits to cultural sites.
- Students will demonstrate general understanding of the similarities and differences between the British and American political systems (e.g., constitutional monarchy, written vs. unwritten constitutions, presidents vs. prime ministers, etc.).
- Students will demonstrate awareness of British contact with and assimilation of non-western cultures (e.g., imperialism, decolonization, immigration).

4. Complete one of the following disciplinary tracks:

*Social Sciences Track*

- Complete two courses from the following:

BUS M 430 : Introduction to International Business. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Complexities confronting U.S. firms and their management in international environments. Emphasizes functional and planning areas, including organization, market research, financial analysis.

**Course Outcomes**

There are no course outcomes available

ECON 257 : International Trade and Finance. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ECON 110

DESCRIPTION: Economic analysis of the mechanisms, problems, institutions, and policies of trade among countries. Financial and monetary arrangements that facilitate trade.

**Course Outcomes**

- Explain the key developments (models) in the intellectual history of the study of the patterns of trade in goods and services from Adam Smith through the present.Broadly discuss the evidence which supports or is contrary to the application of these developments to particular countries and goods and services.Analyze policy within the context of these models in order to gain insights about the patterns of trade.Analyze the gains from international trade with these key models and understand the political economy of trade (who gains and who loses from trade).Analyze the patterns, gains, and losses from international trade (migration) in financial and direct foreign investment and labor migration in the short and long runs.Analyze the reasons for international outsourcing portions of production and the gains and losses from doing so.Identify how trade in goods, services, and capital enter the international income accounts and the balance of payments.Discuss how exchange rates affect trade and how trade, fiscal, and monetary policy affects exchange rates.Explain the essential differences in fiscal and monetary effects for floating and fixed exchange rates.Broadly discuss the development of U.S. trade policy and the world institutions that support international trade and finance.

GEOG 260 : Europe. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Systematic approach to physical base, social and political problems, economic issues, and regional summary.

**Course Outcomes**

- To use other students input to effectively enhance European geographic understanding.
- To demonstrate the connection of the underlying physical "stage" of Europe to the distributions of people and their activities. This includes studying the locations and distributions of climates, mountains, rivers, and natural barriers of the region.
- To comprehend the regional geographic structure of Europe's cultural components including languages, demographics, ethnic groups, and religious beliefs.
- To explicate and define the important historical and contemporary geographic linkages in Europe including settlement structure and major industries (e.g., agriculture, manufacturing, tourism, and transportation).
- To become knowledgeable concerning the ongoing geographical manifestations of political and economic restructuring in the modern era. Emphasis will be given to the formation and spread of the European Union.
- To grasp how the “5 Themes of Geography” [Location, Place, Human Environment Interaction, Region, and Movement] relate to our overall studies of the European realm.
- To write geographic research that is fluent, relevant, and creative.

HIST 310 : European Economic History. (3:3:0)

WHEN TAUGHT: Spring Odd Yrs.

DESCRIPTION: Economic development of Europe from antiquity to the early twentieth century; impact of the economy on social and political institutions.

**Course Outcomes**

- Students will acquire content knowledge about the economic history of Europe from antiquity to the present
- Students will master the skills necessary to summarize, evaluate, and critique historical arguments.
- Students will understand the way evidence is used to construct historical arguments.
- Students will pose historical questions and support them with appropriate evidence
- Students will gain experience collaborating with each other in formulating and carrying out a research project using historical research skills.

POLI 341 : Western European Politics. (3:3:0)

RECOMMENDED: Poli 200.

DESCRIPTION: Politics and policy in western Europe. State-building, party systems, nationalism, and cooperation among advanced industrial countries in comparative, historical perspective. Social and Christian democracy; European Union.

**Course Outcomes**

There are no course outcomes available

POLI 347 : Russia/Former Soviet Politics. (3:3:0)

DESCRIPTION: Comparative politics of Russia and Soviet successor states. Development of political systems from common Soviet heritage, emphasizing post-independence politics and institution building.

**Course Outcomes**

There are no course outcomes available

SOC 310 : Social Inquiry. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: SOC 111; or SOC 112; or SOC 113
DESCRIPTION: Basic ideas and arguments forming sociological inquiry, including philosophical foundations, philosophy of social science, and development of classical theory and contemporary theory.

**Course Outcomes**

There are no course outcomes available

SOC 345 : World Populations. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Fertility, mortality, and migration patterns of world populations as they relate to current social, economic, political, and religious issues.

**Course Outcomes**

There are no course outcomes available

SOC 361 : Theoretical Foundations of Marriage and Family. (3:3:0)
WHEN TAUGHT: Fall; Spring
DESCRIPTION: Comparative analysis of basic ideas and arguments for understanding marriage and family found in social science, social and political theory, law, and other forms of cultural discourse.

**Course Outcomes**

There are no course outcomes available

- Complete two courses from the following:

HIST 308 : The Mediterranean. (3:3:0)
DESCRIPTION: Examining the historiography and key political, cultural, economic, and social developments of the Mediterranean in the medieval and/or early modern periods.

**Course Outcomes**

- Students will understand and be able to analyze the major political, economic, social, and religious developments in Mediterranean history
- Students will be able to trace the historiographical evolution of Mediterranean history and analyze historical questions within this historiographical context
- Students will refine and improve historical research, writing and analytical skills.
- Students will refine and improve oral presentation skills.

HIST 309 : European Revolutions Since 1500. (3:3:0)
WHEN TAUGHT: Winter Odd Yrs.
DESCRIPTION: Social and political revolutions in European history since 1500. Successful and unsuccessful cases of state breakdown; the Dutch Revolt, English Revolution, French Revolution, Revolution of 1848, and Russian Revolution.

**Course Outcomes**

- Students will gain a historical consciousness by demonstrating knowledge about crisis and change in European societies.
- Students will acquire the ability to evaluate and analyze historical documents
- Students will understand the way evidence is used to construct historical arguments.
- Students will gain experience collaborating with each other in formulating and carrying out a research project using historical research skills.

HIST 312 : History of Ideas. (3:3:0)
WHEN TAUGHT: Winter Odd Yrs.
DESCRIPTION: Interrelationship of influential ideas and historical events from the end of the eighteenth century to the present.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Recognize the usefulness, but also the problematic nature of historical periodization.
- Develop interdisciplinary, synthetic, thinking skills, particularly in being able to see history in cultural artifacts and then identify and place these into discursive contexts.
- Relate and trace how ideas continue to influence societies and their institutions
- Awaken in you the realization of how certain modes of modern thought that you might have taken for granted as having existed "forever" can be seen as developments in response to specific historical circumstances.
- Explain how ideas, when extended to their logical conclusions, may challenge your personal world view and consider, as well as articulate, how to resolve such conflicts.
- Write an intellectual history research paper.
- Identify broadly how different approaches to intellectual history operate, e.g. Lovejoy, Cambridge School (Skinner), Berlin, Koselleck, Strauss, etc.

HIST 314 : European Fascisms, 1914 to Present. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, cultural, and social bases of fascist movements, especially in Italy, Germany, and Spain. Rise to power, family policies, warfare, propaganda, racism, genocide, neofascisms.

**Course Outcomes**

- Students will understand and be able to explain and analyze the origins, impacts, foreign policy, theories, and legacy of Fascism, Nazism, and other competing political ideologies
- Students will understand how to use and will be able to analyze and interpret primary source documents and secondary historiographical works.
- Students will understand how to research and write.
- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts
- Students will be able to analyze historical questions and place them in a historiographical context.

HIST 315 : European Jews and the Holocaust. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Attempted genocide of European Jews by Hitler's Third Reich; motives, methods, and implications.

**Course Outcomes**

- Study the genocide of European Jews by Hitler's Third Reich and to explore the motives, methods, and implications of this, as well as the fundamental questions thrown into relief by it.
- Analyze key issues that informed the Holocaust, the context and processees related to it, and to engage with the debates ignited by its legacy. Further develop proficiency in using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Foster specific skills of critical thinking, argumentative and narrative writing, as well as careful reading. Analyze historical questions and issues clearly, assess historical information accurately and distinguish between questionable and valid historical assertions.
- Skillfully integrate data into coherent arguments expressed through a clear, well-written style in exams, papers, and class discussion.

HIST 318 : European Women's History. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

RECOMMENDED: Hist 200.

DESCRIPTION: European women and gender from 1400 to the present.

**Course Outcomes**

- Students will be able to understand and explain major trends in European women's experiences and history since 1400
- Students will be able to analyze and synthesize historiographyof women's history, gender history, and feminism
- Students will read, analyze, and write about primary and secondary sources and explain their connections to one another
- Students will interpret important shifts or trends in the experience of women and attitudes about gender. Students will apply this understanding to the legal, religious, and culture contexts for those shifts or trends
- Working in tandem with each other students will have opportunities to question, investigate, and interrogate contemporary attitudes to women and men's history and gender and how these affect interpretations of the past.

HIST 319 : The Family in Europe. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Nature and development of marriage and family life and structure from the ancient to modern era.

NOTE: Independent Study also.

**Course Outcomes**

- Students will be able to understand and explain major trends in European family life, relationships, and law between 1100 and the present
- Students will be able to analyze and synthesize historiography of family history
- Students will read, analyze, and write about primary and secondary sources and explain their connections to one another.
- Students will interpret important shifts or trends in the experience of family functions and relationships and their connections with the law. Students will apply this understanding to the legal, religious, and culture contexts for those shifts or trends.
- Working in tandem with each other students will have opportunities to question, investigate, and interrogate historical experiences and historiographic interpretations

HIST 320 : Society in Europe. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Common life in Europe from 1500 to the present: family problems, social customs, marriage, superstition, death, diet, work, hardships, migration, and childhood.

**Course Outcomes**

- Students will be able to explain and analyze themes and trends in European social history in both the early modern and modern periods.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze and interpret secondary source documents
- Students will be able to interpret and debate the meanings and historical value of primary and secondary source texts with their peers.
- Students will be able to analyze historical questions and place them in a historiographical context.

*Humanities Track*

- Complete one course from the following:

ARTHC 304 : Greek Art. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: ARTHC 201
DESCRIPTION: History and appreciation of Greek art, with consideration of formative cultures.

**Course Outcomes**

There are no course outcomes available

ARTHC 306 : Roman Art. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: ARTHC 201
DESCRIPTION: Art and architecture of the Etruscans and Romans.

**Course Outcomes**

There are no course outcomes available

ARTHC 310 : Early Christian and Byzantine Art. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: ARTHC 201
DESCRIPTION: Survey of Christian art in the Roman and Byzantine Empire from ca. 200 to 1453.

**Course Outcomes**

There are no course outcomes available

ARTHC 316 : Art of the Medieval West. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: ARTHC 201
DESCRIPTION: Art in western Europe from 400 AD to 1400.

**Course Outcomes**

There are no course outcomes available

ARTHC 320 : Italian Renaissance. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: ARTHC 202
DESCRIPTION: Art and architecture in Italy from 1200 to 1580.

**Course Outcomes**

There are no course outcomes available

ARTHC 325 : Northern Renaissance Art. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: ARTHC 202
DESCRIPTION: Fifteenth- and sixteenth-century art in northern Europe.

**Course Outcomes**

There are no course outcomes available

ARTHC 329 : Renaissance and Baroque Architecture. (3:3:0)
PREREQUISITE: ARTHC 202
DESCRIPTION: History of architecture in Italy, Spain, France, Germany, Austria, and England, 1400?1700.

**Course Outcomes**

There are no course outcomes available

ARTHC 330 : Southern Baroque Art. (3:3:0)
WHEN TAUGHT: Winter

PREREQUISITE: ARTHC 202
DESCRIPTION: History of baroque painting, sculpture, and architecture in Italy, Spain, and France.

**Course Outcomes**
There are no course outcomes available

ARTHC 335 : Northern Baroque Art. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: ARTHC 202
DESCRIPTION: Baroque painting in Flanders and Holland.

**Course Outcomes**
There are no course outcomes available

ARTHC 340 : Nineteenth-Century European Art. (3:3:0)
PREREQUISITE: ARTHC 202
DESCRIPTION: Nineteenth-century art in Europe.

**Course Outcomes**
There are no course outcomes available

ARTHC 350 : Modern Art. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: ARTHC 202
DESCRIPTION: Modern European art and theory, 1900--1945.

**Course Outcomes**
There are no course outcomes available

BULGN 330 : Cultural History of Bulgaria. (3:3:1)
PREREQUISITE: Bulgn 201 or foreign residence experience.
DESCRIPTION: Entry course for returned missionaries or others with extensive Bulgarian language experience.
NOTE: Required course for obtaining language credit by examination (Bulgn 101, 102, 201, 211R). Culminating course for Languages of Learning requirement.

**Course Outcomes**
- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Fulfill GE "Languages of Learning" requirements.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).

CZECH 330 : Cultural History of Czech Republic. (3:3:1)
PREREQUISITE: Czech 201 or foreign residence experience.
DESCRIPTION: Entry course for returned missionaries or others with extensive Czech or Slovak language experience.
NOTE: Required course for obtaining language credit by examination (Czech 101, 102, 201, 211R). Culminating course for Languages of Learning requirement.

**Course Outcomes**
- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).
- Fulfill GE "Languages of Learning" requirements.

CL CV 241 : Greek and Roman Mythology. (3:3:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Greek and Roman gods, heroes, and myths, emphasizing literature but also giving attention to representations in the visual arts.

**Course Outcomes**
There are no course outcomes available

: Honors Greek and Roman Mythology.

**Course Outcomes**

CL CV 245 : Golden Age of Greece. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: History of Civilization, culture, and daily life of Greece as indicated through its literature, art, history, and archaeology.

NOTE: All readings in English. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

CL CV 246 : Golden Age of Rome. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: History of Civilization, culture, and daily life of Rome as indicated through its literature, art, history, and archaeology.

NOTE: All readings in English. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

FREN 361 : French Civilization from the Beginning to 1715. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Fren 321.

RECOMMENDED: Fren 322.

DESCRIPTION: Historical survey of institutions, fine arts, and social conditions to the death of Louis XIV.

NOTE: Fulfills GE Arts or Letters elective.

**Course Outcomes**

- Demonstrate knowledge of the chronology of French civilization and identify the major intellectual and artistic movements, their defining characteristics and contexts.
- Locate and evaluate resources relevant to course assignments.
- Apply appropriate methods of investigation (e.g., formulate hypotheses, make valid arguments, use evidence, cope with ambiguity, evaluate competing interpretations of a given event or topic and communicate findings coherently).
- Establish connections between events, movements, and ideas for the time period covered in this course.
- Articulate and defend clear, orderly thought on cultural topics.

FREN 362 : French Civilization from 1715 to the Present. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Fren 321.

RECOMMENDED: Fren 322.

DESCRIPTION: Historical survey of institutions, fine arts, and social conditions.

NOTE: Fulfills GE Arts or Letters elective.

**Course Outcomes**

- Demonstrate knowledge of the chronology of French civilization and identify the major intellectual and artistic movements, their defining characteristics and contexts.
- Locate and evaluate resources relevant to course assignments.
- Apply appropriate methods of investigation (e.g., formulate hypotheses, make valid arguments, use evidence, cope with ambiguity, evaluate competing interpretations of a given event or topic and communicate findings coherently).
- Establish connections between events, movements, and ideas for the time period covered in this course.
- Articulate and defend clear, orderly thought on cultural topics.

GERM 330 : Cultural History of German-Speaking Peoples. (3:3:1.5)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Germ 202 or equivalent experience.

DESCRIPTION: Culture, with listening, speaking, reading, writing, and grammar as secondary emphases. Includes International Cinema.

NOTE: Entry course for returned missionaries or others with equivalent German language experience. Required course for obtaining language credit by examination (Germ 101, 102, 201, 311R). Prerequisite to all 400-level courses. Culminating course for Languages of Learning requirement.

**Course Outcomes**

There are no course outcomes available

HUNG 330 : Cultural History of Hungary. (3:3:1)

PREREQUISITE: Hung 201 or foreign residence experience.

NOTE: For returned missionaries and others with extensive Hungarian language experience. Required course for obtaining language credit by examination (Hung 101, 102, 201, 211R). Culminating course for Languages of Learning requirement.

**Course Outcomes**

- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).
- Fulfills the GE "Languages of Learning" requirements.

ITAL 420 : Italian Civilization from the Beginning to 1600. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: Ital 340.

DESCRIPTION: Survey of history, music, architecture, literature, and arts that shaped the Italian culture and civilization from the beginning through the Renaissance.

NOTE: Fulfills GE Arts elective.

**Course Outcomes**

- Become familiar with the major intellectual and artistic traditions of Italy from the Etruscan period to the Renaissance by identifying the chronology and main characteristics of each period listed in the syllabus.
- Apply vocabulary, grammar, theory, and history to the texts, music, artifacts, and works of art listed in the syllabus to discover, interpret, and evaluate multiple meanings.
- Develop critical skills and informed aesthetic judgment to discuss and analyze the music, architecture, and works of art listed in the syllabus, paying particular attention to their historical or social setting and their place in shaping culture.
- Locate and evaluate resources relevant to course assignments and apply appropriate methods of investigation (e.g., formulate hypotheses, make valid arguments, use evidence, cope with ambiguity, evaluate competing interpretations, and communicate findings coherently both orally and in writing).

ITAL 421 : Italian Civilization from 1600 to the Modern Era. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: Ital 340.

DESCRIPTION: Survey of institutions, fine arts, and great writers that shaped the history of Italy from the Baroque period to the modern era.

NOTE: Fulfills GE Arts elective.

**Course Outcomes**

- Become familiar with the major intellectual and artistic traditions of Italy from the Baroque Period to modern times by identifying the chronology and main characteristics of each period listed in the syllabus.
- Apply critical concepts, theory, and history to the texts, music, artifacts, and works of art listed in the syllabus to discover, interpret, and evaluate their multiple meanings.
- Develop critical skills and informed aesthetic judgment to discuss and analyze the music, architecture, and works of art listed in the syllabus, paying particular attention to their historical or social setting and their place in shaping culture.
- Locate and evaluate resources relevant to course assignments and apply appropriate methods of investigation (e.g., formulate hypotheses, make valid arguments, use evidence, cope with ambiguity, evaluate competing interpretations), and communicate findings coherently both orally and in writing).

LATVI 330 : Cultural History of Latvia. (3:3:1)

PREREQUISITE: Latvi 201 or foreign residence experience.

NOTE: Entry course for returned missionaries or others of equivalent language experience. Required course for obtaining language credit by examination. May fulfill the GE Languages of Learning requirement.

**Course Outcomes**

- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).
- Fulfills the GE "Languages of Learning" requirements.

LITHU 330 : Cultural History of Lithuania. (3:3:1)

PREREQUISITE: Lithu 201 or foreign residence experience.

NOTE: Entry course for returned missionaries or others of equivalent language experience. Required course for obtaining language credit by examination. May fulfill the GE Languages of Learning requirement.

**Course Outcomes**

- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).
- Fulfills the GE "Languages of Learning" requirements.

POLSH 330 : Cultural History of Poland. (3:3:1)

PREREQUISITE: Polsh 202 or foreign residence experience.

NOTE: Entry course for returned missionaries or others of equivalent language experience. Required course for obtaining language credit by examination. May fulfill the GE Languages of Learning requirement.

**Course Outcomes**

- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).
- Fulfills the GE "Languages of Learning" requirements.Fulfills the GE "Languages of Learning" requirements.

PORT 345 : Portuguese Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department

PREREQUISITE: Port 321.

DESCRIPTION: Culture, history, art, music, and traditions of Portugal.

**Course Outcomes**

- Describe the principal geographic regions, that might include topological features, important cities, and local traditions, customs, and languages.
- Describe the linear progression of historical periods that might include important political, social, and artistic events.
- Recognize and describe important cultural products such as art, literature, architecture, and music, including important works and individuals.
- Describe important cultural institutions that might include family, religion, education and government.

- Analyze recent developments, including political, social, religious, and artistic activities.
- Interpret cultural products and practices within the framework of historical, geographic, religious, and social factors that influence them.
- Write essays in Portuguese, including one final research paper, that demonstrate an advanced awareness of cultural and historical knowledge
- By comparison, recognize and discuss the influence of their own cultural background on their attitudes, beliefs, and worldview.

ROM 340 : Introduction to Romanian Literature and Culture. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Foreign residence experience in Romania.

DESCRIPTION: For returned missionaries or others with extensive Romanian language experience.

NOTE: Required course for obtaining language credit by examination. Culminating course for GE Foreign Language requirement.

**Course Outcomes**

- Meet all program-level learning outcomes.
- Demonstrate knowledge and understanding of the history, politics and culture of Romania both past and present, in a European and world context.
- Place the issues studied in a European and world context and make connections between Romanian events and issues, and important events and facts that have affected Europe or the world in general.
- Be able to analyze and interpret specific Romanian topics at a high academic level using appropriate theories, concepts and research materials.
- Be able to read complex a variety of texts in Romanian, and express (orally or in writing) complex ideas in Romanian.
- Develop the curiosity and habits of thought that will encourage life-long learning and continued interest and even love of Romania, its people and culture.

RUSS 330 : Cultural History of Russia. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Russ 202 or foreign residence experience.
NOTE: Required course for obtaining language credit by examination (Russ 101, 102, 201, 211R). Culminating course for Languages of Learning requirement. Includes International Cinema.

**Course Outcomes**

There are no course outcomes available

SCAND 430 : Cultural History of Scandinavia. (3:3:0)

WHEN TAUGHT: Winter
DESCRIPTION: Scandinavian culture from the Vikings to the present.
NOTE: Works may be read in English translation.

**Course Outcomes**

There are no course outcomes available

SLN 330 : Cultural History of Slovenia. (3:3.0:1.0)

PREREQUISITE: SLN 201 or foreign residence experience.
NOTE: Entry course for returned missionaries or others of equivalent language experience. Required course for obtaining language credit by examination. May fulfill the GE Languages of Learning requirement.

**Course Outcomes**

- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).
- Fulfills the GE "Languages of Learning" requirements.

SPAN 345 : Iberian Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer, Contact Department
PREREQUISITE: Span 321 or concurrent enrollment.
DESCRIPTION: Culture, history, art, music, and traditions of Spain.

**Course Outcomes**

- Students will be able to describe the principal geographic regions, that might include topological features, important cities, and local traditions, customs, and languages.
- Describe and analyze historical periods and current events (e.g., political, social, artistic, and religious developments).
- Recognize and describe important cultural products (e.g., art, literature, architecture, and music, including important works and individuals), cultural institutions (e.g., family, religion, education, and government), and cultural practices (e.g., customs related to birth, marriage, death, holidays, and traditions).
- By comparison, recognize and discuss the influence of their own cultural background on their attitudes, beliefs, and worldview.

SRBCR 330 : Cultural History of the Former Yugoslavia. (3:3:1)

PREREQUISITE: SrbCr 201 or foreign residence experience.
NOTE: For returned missionaries or others with extensive Serbo-Croatian language experience. Required course for obtaining language credit by examination (SrbCr 101, 102, 201, 211R). Culminating course for Languages of Learning requirement.

**Course Outcomes**

- Meet all program-level learning outcomes.

TMA 395 : Dramatic Literature 1. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: TMA 115 & TMA 201 & TMA 202; Theatre arts studies major or minor status.
DESCRIPTION: Survey of dramatic texts, from ancient Greek to today, through Western literary theories, emphasizing performance.

**Course Outcomes**

- Students will synthesize linguistic theory and the social theories and great works of dramatic literature through reading, writing, discussion, film viewing.
- Students will create socially conscious, ideologically-grounded performances that respond both to their world views and contemporary issues in critical theory.
- Students will create cogent, compelling, and mechanically writing for the Humanities in a variety of different mediums—informal responses, production reviews, persuasive essays, and critical analyses.

TMA 396 : Dramatic Literature 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: TMA 115 & TMA 201 & TMA 202; Theatre arts studies major or minor status.

DESCRIPTION: Survey of dramatic texts, from ancient Greek to today, through global literary theories, emphasizing performance.

**Course Outcomes**

- Students will synthesize linguistic theory and the social theories and great works of dramatic literature through reading, writing, discussion, film viewing.
- Students will create socially conscious, ideologically-grounded performances that respond both to their world views and contemporary issues in critical theory.
- Students will create cogent, compelling, and mechanically writing for the Humanities in a variety of different mediums—informal responses, production reviews, persuasive essays, and critical analyses.

UKRAI 330 : Cultural History of Ukraine. (3:3:1)

PREREQUISITE: Ukrai 201 or foreign residence experience.

NOTE: Entry course for returned missionaries or others of equivalent language experience. Required course for obtaining language credit by examination. May fulfill the GE Languages of Learning requirement.

**Course Outcomes**

- In both written and spoken target language, communicate accurately with well educated members of the target-culture about real-world activities.
- Understand detailed written and verbal instructions. Comprehend historical passages, newspaper and magazine articles, and broadcast news reports well educated native speakers encounter routinely in their daily life.
- Acquire background knowledge of important achievements related to the target culture (historical figures and events, major literary and artistic movements, government and religious institutions, etc.). Discuss in the target language cultural practices related to major life events in the target culture (birth, marriage, death, etc.).
- Fulfills the GE "Languages of Learning" requirements.

**Or** any IHum 400-level seminar on European topic

- Complete the following literature, film, and philosophy requirement:

1. Complete one course from the following:

   Any 300- or 400-level literature course from student's foreign language.

   Any 300- or 400-level comparative literature course with a European emphasis.

2. Complete two courses from the following:

   Any 300- or 400-level literature, film, or philosophy course with a European emphasis.

   Select 200-level literature and film courses:

CL CV 241 : Greek and Roman Mythology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Greek and Roman gods, heroes, and myths, emphasizing literature but also giving attention to representations in the visual arts.

**Course Outcomes**

There are no course outcomes available

: Honors Greek and Roman Mythology.

**Course Outcomes**

CL CV 245 : Golden Age of Greece. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: History of Civilization, culture, and daily life of Greece as indicated through its literature, art, history, and archaeology.

NOTE: All readings in English. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

CL CV 246 : Golden Age of Rome. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: History of Civilization, culture, and daily life of Rome as indicated through its literature, art, history, and archaeology.

NOTE: All readings in English. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

CL CV 261 : Greek and Roman Civilization and Literature in Film. (3:3:0)
DESCRIPTION: Literature and civilization of ancient Greece and Rome as depicted in modern film with attendant problems of accuracy and historicity.

**Course Outcomes**
There are no course outcomes available

ENGL 291 : British Literary History 1. (3:3:0)
OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: ENGL 251; or concurrent enrollment.
DESCRIPTION: Development of ideas, movements, genres, and styles in early English literature as illustrated through representative texts.

**Course Outcomes**
There are no course outcomes available

ENGL 292 : British Literary History 2. (3:3:0)
OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: ENGL 251; or concurrent enrollment.
DESCRIPTION: Development of ideas, movements, genres, and styles in later English literature as illustrated through representative texts.

**Course Outcomes**
There are no course outcomes available

GERM 217 : (Germ-Scand) German and Scandinavian Cinema. (3:3:3)
WHEN TAUGHT: Fall Odd Yrs.
RECOMMENDED: A first-year writing course.
DESCRIPTION: Background for understanding and appreciating the best of motion picture art in Germany and Scandinavia.
NOTE: Language of instruction is English; no knowledge of German or Scandinavian languages is required. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

IHUM 270R : European Humanities and the Arts. (.5-6:ARR:ARR)
OFFERED: Study Abroad only.

**Course Outcomes**
No outcomes are available at this time.

SCAND 217 : (Scand-Germ) German and Scandinavian Cinema. (3:3:3)
WHEN TAUGHT: Fall
RECOMMENDED: A first-year writing course.
DESCRIPTION: Background for understanding and appreciating the best of motion picture art in Germany and Scandinavia.
NOTE: Language of instruction is English; no knowledge of German or Scandinavian languages is required. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

5. Complete 12 hours of supporting course work. In consultation with the program coordinator, propose a list of advanced courses (typically senior level) that are European focused and that have a coherent logic relative to educational and career goals. This list must then be approved by the European Studies Executive Committee. Note that courses approved for this requirement may not be used to fulfill any other European Studies requirement. Students are strongly encouraged to take Europ 490R (Senior Seminar in European Studies) as part of this requirement.

6. Complete an exit interview during the final semester. Students come to the interview prepared to lead a discussion on one major European issue of their choice that they've encountered in their program. This could be a current political/economic issue like the European Union or immigration, or it could be a historical/interpretive issue regarding our understanding of

European identity, history, culture, etc.

**Recommended Courses**

These courses can be used to fill the Arts and Letters and Social Science GE requirements or for enrichment electives:

*Arts and Letters*

ArtHC 111.
Engl 230.
Hum 101, 201, 202.
Music 101.
Phil 110.

*Social Sciences*

Anthr 101.
Econ 110.
Pl Sc 150, 170.
Soc 111

*Hours include courses that may fulfill university core requirements.

# Minor in European Studies (15–28 hours*)

Show All Course Descriptions
Hide All Course Descriptions

## Program Requirements

1. Complete the GE Languages of Learning requirement in a European language.
2. Complete the following:

EUROP 200 : Introduction to European Studies. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Introduction to the major, the core disciplines involved and integrated in European studies, and European studies as a discipline.

**Course Outcomes**

- Students will gain a basic understanding of the definition, history, and purpose of European Studies.
- Students will become familiar with the major disciplines involved with European Studies and be able to define -- and know when to engage -- various disciplinary methods.
- Students will gain an understanding of many of the major topics and issues of European Studies.
- Students will develop some ideas about how to orient their subsequent studies within the major.
- Students willdevelop the habit of reading international news in order to keep abreast of European affairs and to cross-check perspectives from country to country.
- Students willlearn how to locate, use, and cite high-quality and reliable resources from the library and online and use that research in the creation of a substantive research paper.

HIST 250 : Europe 1500 to the Present. (3:3:0)
WHEN TAUGHT: Fall Even Yrs.
RECOMMENDED: WRTG 150.
DESCRIPTION: Overview of key political, cultural, economic and social developments in Europe during the early modern and modern periods, 1500—Present.

**Course Outcomes**

There are no course outcomes available

3. Complete three courses from the following:

ARTHC 310 : Early Christian and Byzantine Art. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: ARTHC 201
DESCRIPTION: Survey of Christian art in the Roman and Byzantine Empire from ca. 200 to 1453.

**Course Outcomes**

There are no course outcomes available

ARTHC 316 : Art of the Medieval West. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: ARTHC 201
DESCRIPTION: Art in western Europe from 400 AD to 1400.

**Course Outcomes**

There are no course outcomes available

ARTHC 320 : Italian Renaissance. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: ARTHC 202
DESCRIPTION: Art and architecture in Italy from 1200 to 1580.

**Course Outcomes**

There are no course outcomes available

ARTHC 325 : Northern Renaissance Art. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: ARTHC 202
DESCRIPTION: Fifteenth- and sixteenth-century art in northern Europe.

**Course Outcomes**

There are no course outcomes available

ARTHC 329 : Renaissance and Baroque Architecture. (3:3:0)

PREREQUISITE: ARTHC 202
DESCRIPTION: History of architecture in Italy, Spain, France, Germany, Austria, and England, 1400?1700.

**Course Outcomes**

There are no course outcomes available

ARTHC 330 : Southern Baroque Art. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: ARTHC 202
DESCRIPTION: History of baroque painting, sculpture, and architecture in Italy, Spain, and France.

**Course Outcomes**

There are no course outcomes available

ARTHC 335 : Northern Baroque Art. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: ARTHC 202
DESCRIPTION: Baroque painting in Flanders and Holland.

**Course Outcomes**

There are no course outcomes available

ARTHC 340 : Nineteenth-Century European Art. (3:3:0)

PREREQUISITE: ARTHC 202
DESCRIPTION: Nineteenth-century art in Europe.

**Course Outcomes**

There are no course outcomes available

ENGL 300R : English Literature in a Cultural Setting. (.5-6:ARR:ARR)

WHEN TAUGHT: Contact Department.
NOTE: For Study Abroad students only.

**Course Outcomes**

- Students will identify and define significant characteristics of the literature from each period of British literary history that we study.
- Students will display in several short essays detailed knowledge of the author, time period, and literary text for each of the sites we visit in Britain.
- Students will demonstrate their knowledge of the historical relations among the texts we study by preparing a timeline that features both the birth date and the death date of each author and the composition and publication dates of their works.

EUROP 336R : European Studies. (.5-6:ARR:ARR)

DESCRIPTION: Social sciences core course approved for Study Abroad programs in London, Vienna, Paris, and other locations.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate a sound, general understanding of the historical development of modern Britain. Students will be familiar with all major historical periods: pre-Roman, Roman, Anglo-Saxon, Norman/medieval, Tudors/Enlightenment, Stuarts/civil war/revolution, Hanoverian/Georgian, Victorian/imperial, 20th century/world wars/postwar. But not all periods will be covered equally, and different classes will have different emphases.
- Students will demonstrate the ability accurately and intelligently to discuss how historical sites in London and throughout Britain relate to key historical developments in British history. Site visits will be directly tied to class discussions and writing assignments.
- Students will demonstrate a general understanding of how the history of Britain is reflected in other elements of the study abroad experience, such as literature and humanities course work, museum visits, performances, and visits to cultural sites.
- Students will demonstrate general understanding of the similarities and differences between the British and American political systems (e.g., constitutional monarchy, written vs. unwritten constitutions, presidents vs. prime ministers, etc.).
- Students will demonstrate awareness of British contact with and assimilation of non-western cultures (e.g., imperialism, decolonization, immigration).

EUROP 490R : Senior Seminar in European Studies. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: EUROP 200; Senior status or program coordinator's consent.

DESCRIPTION: Interdisciplinary study of an issue central to European studies; topics vary.

**Course Outcomes**

- Students will gain an in-depth understanding of an issue central to European Studies and be able to articulate that understanding using theories, concepts, research materials, and ideas from the perspectives of more than one European-Studies-related discipline.
- Students will identify a valid research topic and research that topic using appropriate disciplinary methods, and they will write a cogent, scholarly essay in which they report the results of their research.
- Students will understand the relationship of the course's central issue to their country or countries of interest.

FNART 270R : European Fine Arts. (.5-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Art, design, music, and theatre of host countries and other European cultures.

**Course Outcomes**

- Students will identify and analyze art, design, music, and theatre of host countries and other European cultures.

GEOG 260 : Europe. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Systematic approach to physical base, social and political problems, economic issues, and regional summary.

**Course Outcomes**

- To use other students input to effectively enhance European geographic understanding.
- To demonstrate the connection of the underlying physical "stage" of Europe to the distributions of people and their activities. This includes studying the locations and distributions of climates, mountains, rivers, and natural barriers of the region.
- To comprehend the regional geographic structure of Europe's cultural components including languages, demographics, ethnic groups, and religious beliefs.
- To explicate and define the important historical and contemporary geographic linkages in Europe including settlement structure and major industries (e.g., agriculture, manufacturing, tourism, and transportation).
- To become knowledgeable concerning the ongoing geographical manifestations of political and economic restructuring in the modern era. Emphasis will be given to the formation and spread of the European Union.
- To grasp how the “5 Themes of Geography” [Location, Place, Human Environment Interaction, Region, and Movement] relate to our overall studies of the European realm.
- To write geographic research that is fluent, relevant, and creative.

HIST 232 : Introduction to the History of Christianity. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Survey of major developments in Christianity from its origins in the ancient Roman Empire to its global presence today.

**Course Outcomes**

There are no course outcomes available

HIST 300 : The Early Middle Ages. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Decline of Rome and the early formative stages of early medieval civilization; analysis of political, economic, and social changes from A.D. 285 to 950.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in the Early Middle Ages.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers

HIST 301 : The Late Middle Ages. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Europe from 950 to 1350; maturation of medieval civilization; failure of German, success of French leadership; economic, religious, cultural, intellectual trends.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in the Late Middle Ages.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze historical questions and place them in a historiographical context.

- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers

HIST 302 : The Italian Renaissance. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Major political, social, and cultural events in Italy from 1200 to 1530, emphasizing concept of the Renaissance in modern historiography.

**Course Outcomes**

- Students will understand and be able to analyze the major political, economic, social, and religious developments in Italian Renaissance history
- Students will be able to trace the historiographical evolution of the Italian Renaissance and analyze historical questions within this historiographical context
- Students will refine and improve historical research, writing and analytical skills

HIST 303 : The Reformation: Age of Turmoil. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Sixteenth-century religious upheaval; ideological, cultural, political, and socioeconomic struggles to mid-seventeenth century.

**Course Outcomes**

- Students will be able to explain and analyze the major religious developments in Europe during the Reformation (1500-1700).
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze and interpret secondary source documents
- Students will be able to interpret and debate the meanings and historical value of primary and secondary source texts with their peers.
- Students will be able to analyze historical questions and place them in a historiographical context.

HIST 304 : The Expansion of Europe, 1400-1800. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Early voyages of discovery and the actions of Europeans in the wider world from about 1400 to 1800.

**Course Outcomes**

There are no course outcomes available

HIST 305 : The Age of Enlightenment. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Developments in Europe from 1650 to the French Revolution, emphasizing political thought, science, and philosophy in the Enlightenment.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, intellectual, and cultural developments in Europe between 1650 and 1815.
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills
- Students will analyze historical questions and place them in historiographical context
- Students will understand the ideas central to the Enlightenment.

HIST 306 : Nineteenth-Century Europe. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, social, and intellectual history of Europe from 1815 to 1914.

**Course Outcomes**

- Students will understand and be able to explain and analyze the international affairs and the political, intellectual, social, and economic history of Europe from 1815-1914
- Students will understand how to use and will be able to analyze and interpret primary source documents.
- Students will be able to review, critique, and evaluate historiographical works from a variety of European nations, as well as analyze historical questions and place them in a historiographical context.
- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts.

HIST 307 : Europe Since 1914. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: International affairs and political and economic history of major European countries (including Russia) from World War I to the present.

**Course Outcomes**

- Students will understand and be able to explain and analyze the international affairs and the political, cultural, military, social, and economic history of Europe from the two world wars until the present
- Students will understand how to use and will be able to analyze and interpret primary source documents.
- Students will be able to review, critique, and evaluate historiographical works.

- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to analyze and discuss current events from more than one national viewpoint.

HIST 308 : The Mediterranean. (3:3:0)

DESCRIPTION: Examining the historiography and key political, cultural, economic, and social developments of the Mediterranean in the medieval and/or early modern periods.

**Course Outcomes**

- Students will understand and be able to analyze the major political, economic, social, and religious developments in Mediterranean history
- Students will be able to trace the historiographical evolution of Mediterranean history and analyze historical questions within this historiographical context
- Students will refine and improve historical research, writing and analytical skills.
- Students will refine and improve oral presentation skills.

HIST 309 : European Revolutions Since 1500. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Social and political revolutions in European history since 1500. Successful and unsuccessful cases of state breakdown; the Dutch Revolt, English Revolution, French Revolution, Revolution of 1848, and Russian Revolution.

**Course Outcomes**

- Students will gain a historical consciousness by demonstrating knowledge about crisis and change in European societies.
- Students will acquire the ability to evaluate and analyze historical documents
- Students will understand the way evidence is used to construct historical arguments.
- Students will gain experience collaborating with each other in formulating and carrying out a research project using historical research skills.

HIST 310 : European Economic History. (3:3:0)

WHEN TAUGHT: Spring Odd Yrs.

DESCRIPTION: Economic development of Europe from antiquity to the early twentieth century; impact of the economy on social and political institutions.

**Course Outcomes**

- Students will acquire content knowledge about the economic history of Europe from antiquity to the present
- Students will master the skills necessary to summarize, evaluate, and critique historical arguments.
- Students will understand the way evidence is used to construct historical arguments.
- Students will pose historical questions and support them with appropriate evidence
- Students will gain experience collaborating with each other in formulating and carrying out a research project using historical research skills.

HIST 318 : European Women's History. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

RECOMMENDED: Hist 200.

DESCRIPTION: European women and gender from 1400 to the present.

**Course Outcomes**

- Students will be able to understand and explain major trends in European women's experiences and history since 1400
- Students will be able to analyze and synthesize historiographyof women's history, gender history, and feminism
- Students will read, analyze, and write about primary and secondary sources and explain their connections to one another
- Students will interpret important shifts or trends in the experience of women and attitudes about gender. Students will apply this understanding to the legal, religious, and culture contexts for those shifts or trends
- Working in tandem with each other students will have opportunities to question, investigate, and interrogate contemporary attitudes to women and men's history and gender and how these affect interpretations of the past.

HIST 319 : The Family in Europe. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Nature and development of marriage and family life and structure from the ancient to modern era.

NOTE: Independent Study also.

**Course Outcomes**

- Students will be able to understand and explain major trends in European family life, relationships, and law between 1100 and the present
- Students will be able to analyze and synthesize historiography of family history
- Students will read, analyze, and write about primary and secondary sources and explain their connections to one another.
- Students will interpret important shifts or trends in the experience of family functions and relationships and their connections with the law. Students will apply this understanding to the legal, religious, and

culture contexts for those shifts or trends.
- Working in tandem with each other students will have opportunities to question, investigate, and interrogate historical experiences and historiographic interpretations

HIST 320 : Society in Europe. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Common life in Europe from 1500 to the present: family problems, social customs, marriage, superstition, death, diet, work, hardships, migration, and childhood.

**Course Outcomes**

- Students will be able to explain and analyze themes and trends in European social history in both the early modern and modern periods.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to analyze and interpret secondary source documents
- Students will be able to interpret and debate the meanings and historical value of primary and secondary source texts with their peers.
- Students will be able to analyze historical questions and place them in a historiographical context.

IHUM 270R : European Humanities and the Arts. (.5-6:ARR:ARR)

OFFERED: Study Abroad only.

**Course Outcomes**

No outcomes are available at this time.

IAS 399R : Academic Internship: International. (.5-9:ARR:ARR)

PREREQUISITE: Acceptance into program.

DESCRIPTION: Individualized work or volunteer experience in an international setting.

NOTE: Class must be coordinated through International Study Programs.

**Course Outcomes**

- · Apply skills and material learned in traditional courses to a real-world workplace environment.· Demonstrate proficiency in the skills required by the internship supervisor.· Demonstrate an ability to link insights gained from traditional classes and from real-world workplace experiences.

POLI 341 : Western European Politics. (3:3:0)

RECOMMENDED: Poli 200.

DESCRIPTION: Politics and policy in western Europe. State-building, party systems, nationalism, and cooperation among advanced industrial countries in comparative, historical perspective. Social and Christian democracy; European Union.

**Course Outcomes**

There are no course outcomes available

POLI 347 : Russia/Former Soviet Politics. (3:3:0)

DESCRIPTION: Comparative politics of Russia and Soviet successor states. Development of political systems from common Soviet heritage, emphasizing post-independence politics and institution building.

**Course Outcomes**

There are no course outcomes available

POLI 351 : British Government and Politics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200.

DESCRIPTION: Examination of the origin and contemporary operation of British political institutions as they relate to British society.

**Course Outcomes**

There are no course outcomes available

SPAN 345 : Iberian Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer, Contact Department

PREREQUISITE: Span 321 or concurrent enrollment.

DESCRIPTION: Culture, history, art, music, and traditions of Spain.

**Course Outcomes**

- Students will be able to describe the principal geographic regions, that might include topological features, important cities, and local traditions, customs, and languages.
- Describe and analyze historical periods and current events (e.g., political, social, artistic, and religious developments).
- Recognize and describe important cultural products (e.g., art, literature, architecture, and music, including important works and individuals), cultural institutions (e.g., family, religion, education, and government), and cultural practices (e.g., customs related to birth, marriage, death, holidays, and

traditions).

- By comparison, recognize and discuss the influence of their own cultural background on their attitudes, beliefs, and worldview.

## Undergraduate Courses

### 200-Level Courses

EUROP 200 : Introduction to European Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to the major, the core disciplines involved and integrated in European studies, and European studies as a discipline.

**Course Outcomes**

- Students will gain a basic understanding of the definition, history, and purpose of European Studies.
- Students will become familiar with the major disciplines involved with European Studies and be able to define -- and know when to engage -- various disciplinary methods.
- Students will gain an understanding of many of the major topics and issues of European Studies.
- Students will develop some ideas about how to orient their subsequent studies within the major.
- Students willdevelop the habit of reading international news in order to keep abreast of European affairs and to cross-check perspectives from country to country.
- Students willlearn how to locate, use, and cite high-quality and reliable resources from the library and online and use that research in the creation of a substantive research paper.

### 300-Level Courses

EUROP 336R : European Studies. (.5-6:ARR:ARR)

DESCRIPTION: Social sciences core course approved for Study Abroad programs in London, Vienna, Paris, and other locations.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will demonstrate a sound, general understanding of the historical development of modern Britain. Students will be familiar with all major historical periods: pre-Roman, Roman, Anglo-Saxon, Norman/medieval, Tudors/Enlightenment, Stuarts/civil war/revolution, Hanoverian/Georgian, Victorian/imperial, 20th century/world wars/postwar. But not all periods will be covered equally, and different classes will have different emphases.
- Students will demonstrate the ability accurately and intelligently to discuss how historical sites in London and throughout Britain relate to key historical developments in British history. Site visits will be directly tied to class discussions and writing assignments.
- Students will demonstrate a general understanding of how the history of Britain is reflected in other elements of the study abroad experience, such as literature and humanities course work, museum visits, performances, and visits to cultural sites.
- Students will demonstrate general understanding of the similarities and differences between the British and American political systems (e.g., constitutional monarchy, written vs. unwritten constitutions, presidents vs. prime ministers, etc.).
- Students will demonstrate awareness of British contact with and assimilation of non-western cultures (e.g., imperialism, decolonization, immigration).

### 400-Level Courses

EUROP 490R : Senior Seminar in European Studies. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: EUROP 200; Senior status or program coordinator's consent.

DESCRIPTION: Interdisciplinary study of an issue central to European studies; topics vary.

**Course Outcomes**

- Students will gain an in-depth understanding of an issue central to European Studies and be able to articulate that understanding using theories, concepts, research materials, and ideas from the perspectives of more than one European-Studies-related discipline.
- Students will identify a valid research topic and research that topic using appropriate disciplinary methods, and they will write a cogent, scholarly essay in which they report the results of their research.
- Students will understand the relationship of the course's central issue to their country or countries of interest.

# International Development

## The Discipline

International development is the study of basic social needs in developing areas or countries. It includes academic disciplines such as formal and nonformal education and literacy, economic development, primary health care, small business activities, water sanitation, agricultural productivity, nutrition, ecological preservation, etc. Development obviously implies raising the level and quality of life throughout the "underdeveloped" world.

Students should pursue solid preparation in an established major as well as classroom knowledge and experience in international development. This minor is designed to strengthen and expand the chosen major. Students will be assigned a faculty mentor in their major department who will help coordinate the minor with the major. In addition to a focused course of study, internship experience is highly encouraged. Internships provide valuable experience in applying development theory as well as allowing students to earn credit toward the minor (and in some cases the major as well).

# Minor in International Development (18 hours*)

Show All Course Descriptions
Hide All Course Descriptions

## Program Requirements

1. No double-counting courses within the different areas of this minor is allowed.
2. Complete the following:

IAS 220 : Introduction to Development Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Exploration of international development in non-formal education, micro-enterprises, community organizations; hunger, poverty, and other special problems in developing areas of the world.

**Course Outcomes**

- Upon successfully completing this course, a student will be able to recognize the historical origins of international development and the various agendas that it embodies. Upon successfully completing this course, a student will be able to recognize and articulate the complexity of international development issues and their interdisciplinary nature. Upon successfully completing this course, a student will be able to identify major theories and approaches to international development both in general and across different key disciplines. Upon successfully completing this course, a student will be intellectually ready to embark on an International Development Minor Internship.

3. Complete two courses from the following (6 hours):

ANTHR 441 : Anthropology of Development. (3:3:3)

DESCRIPTION: Theory, practice, and research methods regarding the anthropological study and resolution of poverty, disease, malnutrition, displacement, and inadequate educational opportunities.

**Course Outcomes**

- To enable the students to apply anthropological theory and ideas in a practical manner and by so doing to assess how the process of development has traditionally been done, say from 1945 to the present. Has that system worked? What have been its successes and failures, and why? We will study what the difficulties are that impede development, structurally, culturally, and environmentally. In addition, we will ask whether the cross-cultural analysis and communication perspective that anthropology (supposedly) excels in helps. Does or can the use of anthropological techniques and analysis help make development more successful? Has anthropologically-informed development worked? Where, when, why? And if not, why not? In a word, can the principles and practices of anthropology be used in development projects to produce something more successful and reliable in the way of development? Can the principles and skills be identified and learned or imparted to a group of students so that new practitioners can be more successful if they enter into some kind of development enterprise or project? These objectives will be achieved by a] studying class texts; b] undertaking an individual research project; c] preparing and presenting a critique of a development project based on a journal account. Outcomes will be the ability to better understand the role of Anthropology in development work coupled with greater knowledge and skills in carrying out personal development projects. This in turn will contribute to greater confidence; a greater ability to analyze and understand human activity, sociality and thought; a greater awareness of cultural diversity, and an increased ability to communicate both orally and in written work.

COMMS 382 : Issues in Global Communication. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Communications or international relations major or minor status.

DESCRIPTION: Issues relating to communicating in a global village. Approaches may include global information and policy, cultural imperialism, intercultural interaction, and multinational communication strategies.

**Course Outcomes**

There are no course outcomes available

ECON 230 : Economic Development and Growth. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: ECON 110

DESCRIPTION: Problems and processes of economic growth and development, emphasizing less-developed nations.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Be familiar with the labor and consumption patterns among the world's poor.Demonstrate an understanding of how modifying the neoclassical assumptions learned in Econ 110 can affect the welfare implications of markets. In particular, how the welfare implications are affected byExternalities and Public GoodsFixed Costs or Increasing ReturnsPoorly Enforced Property RightsGain a basic understanding of econometric methods used in testing economic theories in growth and development.Analyze the Solow Growth model and its implications for economic growth.Explain the functioning of the credit and capital market:How it relates to alleviating poverty and stimulating economic growth.Why it may be prone to information problems and the implications of those problems.Discuss the potential role of government in economic development. Especially as it relates to:Public Goods and ExternalitiesEnforcing ContractsCorruptionExplain the importance of labor, health, and education to the lives of those in developing countries and how these fields relate to improving outcomes among the poor.

(prerequisite: Econ 110)

EDLF 363 : Education, Poverty, and Community Development. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Examines the nexus between education, poverty, and socioeconomic development challenges facing developing countries through the perspective of economics, religion, and the state.

**Course Outcomes**

- Identify and critically reflect upon issues and theories of poverty and human development causes, interrelations, feedback, and be able to offer possible solutions.
- Locate, understand, and critically review development theories and research within their respective disciplines and within the interdisciplinary field of Development Studies
- Analyze relevant development phenomena in a complex manner using key concepts and theories studied during the course.
- Formulate complex research questions regarding development.
- Communicate scientific issues and follow the development of knowledge.
- Develop a more effective understanding of the economics, social, and political dimensions of educational development within and across national boundaries.
- Compare the benefits and limitations of different policy construction and aggregation methods and the kinds of results that one might obtain in interventions.
- Improve critical thinking and reasoning, and writing skills.

POLI 444 : The Political Economy of Development. (3:3:0)

WHEN TAUGHT: Contact Department.

RECOMMENDED: Econ 110, Poli 200.

DESCRIPTION: Political foundations of growth, providing public goods, and political reform in developing countries. Development and how institutions and culture shape it.

**Course Outcomes**

There are no course outcomes available

SOC 340 : Sociology of International Development. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Soc 111 or 112; IAS 220.

DESCRIPTION: Paradigms of development and poverty; international, national, and grass roots approaches to promote development and reduce poverty; and application in developing nations.

**Course Outcomes**

- Become familiar with different theories about development.
- Understand the relationship between development and major social insitutions.
- Learn about what different organizations are doing to promote beneficial development.
- Learn to apply what you have learned to a specific aspect of development.
- Integrate what you have learned to develop your own approach to development.

4. Complete 9 hours from the electives below. (Courses counted above do not double count.):

ANTHR 247 : Applied Anthropology. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Anthropological principles and methods applied to business, education, environment, government, communication, national and international development, and health sectors. Ethically and culturally appropriate strategies for researching and participating in planned socio-cultural change.

**Course Outcomes**

- This course has the objectives to introduce students to career options outside academia and to help them explore graduate programs that will prepare them for those careers. This course will also introduce them to theoretical and ethical issues in applied and practicing anthropology and to some of the current social problems that are dominating the field. Students will learn the basic training in the skills and methodologies, (including report writing), that they will use as an applied anthropologist.

**ANTHR 441 : Anthropology of Development. (3:3:3)

DESCRIPTION: Theory, practice, and research methods regarding the anthropological study and resolution of poverty, disease, malnutrition, displacement, and inadequate educational opportunities.

**Course Outcomes**

- To enable the students to apply anthropological theory and ideas in a practical manner and by so doing to assess how the process of development has traditionally been done, say from 1945 to the present. Has that system worked? What have been its successes and failures, and why? We will study what the difficulties are that impede development, structurally, culturally, and environmentally. In addition, we will ask whether the cross-cultural analysis and communication perspective that anthropology (supposedly) excels in helps. Does or can the use of anthropological techniques and analysis help make development more successful? Has anthropologically-informed development worked? Where, when, why? And if not, why not? In a word, can the principles and practices of anthropology be used in development projects to produce something more successful and reliable in the way of development? Can the principles and skills be identified and learned or imparted to a group of students so that new practitioners can be more successful if they enter into some kind of development enterprise or project? These objectives will be achieved by a] studying class texts; b] undertaking an individual research project; c] preparing and presenting a critique of a development project based on a journal account. Outcomes will be the ability to better understand the role of Anthropology in development work coupled with greater knowledge and skills in carrying out personal development projects. This in turn will contribute to greater confidence; a greater ability to analyze and understand human activity, sociality and thought; a greater awareness of cultural diversity, and an increased ability to communicate both orally and in written work.

**ECON 230 : Economic Development and Growth. (3:3:0)

WHEN TAUGHT: Spring

PREREQUISITE: ECON 110

DESCRIPTION: Problems and processes of economic growth and development, emphasizing less-developed nations.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Be familiar with the labor and consumption patterns among the world's poor.Demonstrate an understanding of how modifying the neoclassical assumptions learned in Econ 110 can affect the welfare implications of markets. In particular, how the welfare implications are affected byExternalities and Public GoodsFixed Costs or Increasing ReturnsPoorly Enforced Property RightsGain a basic understanding of econometric methods used in testing economic theories in growth and development.Analyze the Solow Growth model and its implications for economic growth.Explain the functioning of the credit and capital market:How it relates to alleviating poverty and stimulating economic growth.Why it may be prone to information problems and the implications of those problems.Discuss the potential role of government in economic development. Especially as it relates to:Public Goods and ExternalitiesEnforcing ContractsCorruptionExplain the importance of labor, health, and education to the lives of those in developing countries and how these fields relate to improving outcomes among the poor.

ECON 431 : Economic Development. (3:3:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: ECON 380; Econ 388 (or concurrent enrollment) or Pl Sc 328.

DESCRIPTION: Microeconomic analysis of the causes of income differences across countries.

**Course Outcomes**

- Discuss the labor and consumption patterns among the world's poor.Demonstrate an understanding of how modifying the neoclassical assumptions learned in Econ 380 can affect the welfare implications of markets. In particular, how the welfare implications are affected byExternalities and Public GoodsFixed Costs or Increasing ReturnsPoorly Enforced Property Rights.Discuss the functioning of the credit and capital market:How it relates to alleviating poverty and stimulating economic growth.Why it may be prone to information problems and the implications of those problems.Explain the potential role of government in economic development, especially as it relates to:Public Goods and ExternalitiesEnforcing ContractsCorruptionExplain the importance of labor, health, and education to the lives of those in developing countries and how these fields relate to improving outcomes among the poor.

ECON 432 : Economic Growth. (3:3:0)

PREREQUISITE: ECON 380 & ECON 381

RECOMMENDED: Econ 388.

DESCRIPTION: Theory and evidence relating to economic growth, including physical and human capital accumulation, population, technological change, institutions, and government.

**Course Outcomes**

- Adjust values in one currency to values in another currency controlling for purchasing power parity (PPP) deviations.Demonstrate an understanding of basic dynamic models of economic growth, including:The Solow modelThe Solow model with population growthThe Harrod-Domar modelAK modelsModels of product varietySchumpeterian models.Discuss growth and development accounting, and decompose observed differences across countries into efficiency and technology components.Discuss Lorenz curves and Gini coefficients.Discuss how growth interacts with:Population & demographyHuman capitalTechnical progressOpennessGovernmentInequalityCultureGeography, Climate & Resources.

ECON 459 : International Monetary Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ECON 381 & ECON 388; or ECON 381 & PL SC 328

DESCRIPTION: Monetary and macroeconomic aspects of international relations dealing primarily with short-run balance-of-payments disequilibrium and adjustments.

**Course Outcomes**

- Demonstrate a familiarity with the key issues in two broad fields:International Finance, particularly exchange rate behavior, Open Economy Macroeconomics.Discuss the nature of the foreign exchange market, including:It's market organizationThe role of vehicle currenciesThe instruments tradedThe role of arbitrage.Understand and use models of exchange rate behavior:Covered and uncovered interest rate parityLong-run monetary and equilibrium models.Understand financial portfolio theory to the extent that it is useful in explaining exchange rate behavior, including:The determination of risk premiaHow it may explain the "forward bias" puzzle.Discuss the history of the international financial system since the late 1700's.Discuss the international aspects of the national income and product accounts, along with the balance of payments accounts.Apply simple dynamic models of consumption smoothing to the current account.

EDLF 362 : Introduction to International Development Education. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Major concepts and research in educational aspects of poverty alleviation and human development. Role of education as foundation of poverty alleviation, expanding human capabilities, and for promoting national development.

**Course Outcomes**

- Develop basic literacy in the historical and current debates on the meaning and goals of education and development and a framework.
- Become aware of key theoretical concepts and different understandings on education and development, and the significance of human rights mainstreaming as a pillar in disciplinary and professional divide.
- Grasp the interdependence of socio-cultural, political, and economic systems in education and development.
- Understand development as a problem-solving process advanced through policies and programs at different levels by diverse actors.
- Examine strengths and weaknesses of development architectures--particularly in relation to key problems and issues like poverty, exclusion, gender, empowerment and dignity, sustainability, capabilities and functioning and human rights. Learn to question the "Washington Consensus" wisdom and existing systems, structures, and models are working and, if not, what might work instead.
- Begin the process of coming to a personal definition of poverty and development, in harmony with global guidelines and professional standards.
- Study development as part of the larger International Development community and integrate IDE framework into this professional learning community.

**EDLF 363 : Education, Poverty, and Community Development. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Examines the nexus between education, poverty, and socioeconomic development challenges facing developing countries through the perspective of economics, religion, and the state.

**Course Outcomes**

- Identify and critically reflect upon issues and theories of poverty and human development causes, interrelations, feedback, and be able to offer possible solutions.
- Locate, understand, and critically review development theories and research within their respective disciplines and within the interdisciplinary field of Development Studies
- Analyze relevant development phenomena in a complex manner using key concepts and theories studied during the course.
- Formulate complex research questions regarding development.
- Communicate scientific issues and follow the development of knowledge.
- Develop a more effective understanding of the economics, social, and political dimensions of educational development within and across national boundaries.
- Compare the benefits and limitations of different policy construction and aggregation methods and the kinds of results that one might obtain in interventions.
- Improve critical thinking and reasoning, and writing skills.

GEOG 101 : Global Environment: Understanding Physical Geography. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Physical environment, distribution and interrelationships of climates, landforms, ecosystems and their human significance.

**Course Outcomes**

There are no course outcomes available

GEOG 306 : Public Land Conservation. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Environmental and social geography of public lands; analyzing historical, planning, management, and ecological issues.

**Course Outcomes**

There are no course outcomes available

HLTH 100 : Introduction to Public Health. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to public health professions including exploration of current issues, job opportunities,

the essential public health services, and an overview of the public health major.

**Course Outcomes**

- 1. Identify key events in the history of public health that have shaped the current state of the profession
- 2. Describe core public health values
- 3. Identify the ten essential public health services and describe which aspects of the profession hold the most relevance for employment and personal fulfillment
- 4. Delineate how health is defined and measured as well as recognize the impact of social, environmental, and behavioral determinants of health
- 5. Describe the importance of global health and recognize how actions in the US impact the rest of the world and vice versa
- 6. Identify the critical roles and contributions of epidemiology, environmental/occupational health, health promotion, medicine, and allied health within the public health profession
- 7. Determine their interest in the public health degree and identify the types of professional and educational opportunities available to them within public health

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

**Course Outcomes**

- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

HLTH 403R : Health Problems Workshop. (.5-5:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Summer

**Course Outcomes**

- Reflect a focused analysis of readings and conduct applied projects for a special readings topic important to public health.

HLTH 420 : Injury and Violence Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100

DESCRIPTION: Concepts and interventions related to both unintentional injuries and violence.

**Course Outcomes**

- Describe the impact of injures on health and on society in terms of mortality, morbidity, disability, and cost.
- Define the terms used in the injury prevention field.
- Describe the models used to analyze injuries and determine interventions.
- Select valid sources of injury prevention information.
- Select and recommend proven and effective injury prevention interventions.

HLTH 450 : Women's Health Issues. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Overview of selected health topics affecting women's health status. Primary emphasis on steps to enhance personal health and fulfill divine roles from childhood through adulthood.

**Course Outcomes**

- Identify and understand the determinants of women's health issues.(Learning activities: lecture, class discussion, videos, out of class activites, guest lecturers)
- Identify and report on specific chronic and infectious diseases that affect women.(Learning activities: lecture, class discussion, book review, guest lecture)
- Identify ways to improve women's health using a variety of assessment sources.(Learning activities: lecture, class discussion, review of CDC and other health statistics, interviews, guest lecture)

HLTH 480 : International Health. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Identifying disease patterns in "developing" countries, exploring the social and cultural context of health, and reviewing behavior change strategies for improving well-being.

**Course Outcomes**

- Idenitfy behaviors that improve maternal and child health and how they may be specific for particular groups.
- Discuss the determinants of global diseases and why inequalities and inequities exist.
- Explain how culture, our own and others, facilitates or hinders practicing optimal health behaviors.
- Describe the leading causes of morbidity (sickness) and mortablity among women and children in the

developing world.
- Discuss how undernutrition and overnutrition contribute to morbidity and mortality related to infectious and chronic disease.
- Using principles of epidemiology, identify the leading causes of morbidity (sickness) and mortablity among women and children in the developing world and compare the burden of disease across different regions of the world.
- Describe how monitoring, evaluation, and applied research improve health programs.
- Discuss successful, evidence-based strategies for changing behaviors and improving health.

HLTH 496R : Academic Internship. (.5-9:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: HLTH 439
DESCRIPTION: Senior capstone experience.

**Course Outcomes**

- Obtain experience, as proctored by an approved internship supervisor, to apply professional competencies in public health as assessed through an internship report and internship supervisor rating

IAS 397R : Topics in International and Area Studies. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Instructor's consent.
DESCRIPTION: Study relating to current world problems.

**Course Outcomes**

- Students will gain knowledge through advanced study in focused area of IAS
- The student will develop these skills by producing a well-reasoned and well-written research paper
- Develop techniques of advanced research appropriate to the study

:

**Course Outcomes**

***IAS 399R : Academic Internship: International. (.5-9:ARR:ARR)

PREREQUISITE: Acceptance into program.
DESCRIPTION: Individualized work or volunteer experience in an international setting.
NOTE: Class must be coordinated through International Study Programs.

**Course Outcomes**

- · Apply skills and material learned in traditional courses to a real-world workplace environment.· Demonstrate proficiency in the skills required by the internship supervisor.· Demonstrate an ability to link insights gained from traditional classes and from real-world workplace experiences.

(Note: Students must complete IAS 220 prior to participating in an international development-related internship)

NDFS 380 : International Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: NDFS 100
DESCRIPTION: Causes and consequences of nutrient deficiencies common in developing countries. Appropriate interventions to prevent or treat malnutrition.

**Course Outcomes**

- Relate critical nutrient requirements deficiencies to nutritional diseases and poor cognitive devolopment
- Understand the breadth of undernutrition, poverty and hunger that plague the developing world.
- Understand the scientific literature that relates to nutional problems in devloping societies
- Relate the nutritional status of undernourished children to their diets and suggest plausible solutions

(prerequisite: NDFS 200)

POLI 302 : Experimental Research Methods. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: Poli 200 and Poli 328, or concurrent enrollment.
DESCRIPTION: Students will learn how to conduct experiments in the social sciences. All students will conduct an original experiment, learn how to analyze the data, and present their results in a publishable format.

**Course Outcomes**

There are no course outcomes available

POLI 372 : International Political Economy. (3:3:0)

WHEN TAUGHT: Contact Department.
DESCRIPTION: Political implications of international trade, investment, and monetary policies within an increasingly interdependent global context; transnationalism.

**Course Outcomes**

There are no course outcomes available

POLI 374 : Ethics and International Affairs. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Ethical considerations in study and practice of international politics. Realism, idealism, and other theories of state behavior subjected to ethical standards.

**Course Outcomes**

There are no course outcomes available

POLI 378 : International Conflict. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 150, 170, 250, or 270; Poli 200.

DESCRIPTION: Causes of war; alliances and empires; military innovation; civil-military relations; fungibility of forces; terrorism; security studies methods; use and misuse of history.

**Course Outcomes**

There are no course outcomes available

**POLI 444 : The Political Economy of Development. (3:3:0)

WHEN TAUGHT: Contact Department.

RECOMMENDED: Econ 110, Poli 200.

DESCRIPTION: Political foundations of growth, providing public goods, and political reform in developing countries. Development and how institutions and culture shape it.

**Course Outcomes**

There are no course outcomes available

POLI 472 : International Political Economy of Women. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Effects upon national, international, and developmental policies when women are rendered visible and valued.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

PWS 115 : Introduction to Wildlife and Wildlands Conservation. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Assisting students in choosing individual professions and curricula.

**Course Outcomes**

- Student will be able to make an informed decision on majoring in Wildlife and Wildlands Conservation based on career opportunities and course work required to qualify for career positions.
- Students will be able to articulate stewardship responsibilities of managers to represent multiple uses of resources by multiple users with divergent opinions and perspectives.

PWS 150 : Environmental Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Conservation and management of natural resources concurrent with increasing socioeconomic and human population demands; factors such as soil, water, and air pollution, resources management, bioremediation, nutrient cycles, and global climate changes

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Gain a deep appreciation for the Lord's admonition to Adam and Eve regarding the Earth to dress it and keep it
- Engage others and participate in discussions about major environmental problems, movements, and solutions (e.g., desertification, invasive species, water pollution, green revolution, and renewable energy).
- Understand how “science” is conducted.
- Demonstrate a fundamental knowledge (i.e., scientific literacy) of the environment and current environmental problems facing us locally, regionally, and globally.
- Devise experiments with testable hypotheses based the scientific method—process of making observations and logically integrating those observations into a model of how the world works.
- Foster and promote environmental stewardship within your realm of influence and your community.

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

**Course Outcomes**

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 303 : Soils Conservation and Resources. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

RECOMMENDED: Geol 111.

DESCRIPTION: Taxonomy of world soils; conservation and management of agricultural, wildland, wetland, and urban soils.

**Course Outcomes**

- Understand soil physics, chemistry, taxonomy, and water movement to maintain natural resources.
- Apply soil conservation practices and principles to regions sensitive to soil degradation.
- Understand the history, development, and terminology associated with USDA Soil Taxonomy and be familiar with other soil taxonomic systems. Recognize soil orders and suborders from the physical and chemical characteristics of the soil

RECM 306 : Introduction to Nonprofit Organizations. (3:3:0)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Leading in nonprofit organizations using effective administrative practices; financial issues; history and development of nonprofits; organizational structure; membership requirements, fund raising, and marketing.

**Course Outcomes**

There are no course outcomes available

RECM 326 : Nonprofit Resource Development. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Understanding philanthropy and applying fundraising principles and techniques in a nonprofit organization.

**Course Outcomes**

There are no course outcomes available

RECM 336 : Nonprofit Management. (3:3:2)

WHEN TAUGHT: Winter

DESCRIPTION: Management practices in nonprofit setting; analyzing and evaluating personnel; measuring performance evaluations; articulating and appreciating volunteer motivations.

**Course Outcomes**

There are no course outcomes available

RECM 453 : Grant Writing. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Oral and written communication skills; financial issues in the nonprofit field; grant writing history; writing successful grants; needs of foundations.

**Course Outcomes**

There are no course outcomes available

SOC 301 : Applied Social Research Methods. (3:3:0)

PREREQUISITE: STAT 121 & SOC 300

DESCRIPTION: Research methods training for conducting research in applied settings using social research methods such as needs assessments, social impact analysis, and program evaluations.

**Course Outcomes**

- Graduates know the full range of methodologies, the basic epistemological assumptions associated with each, the criteria for evaluating quality research, and how to select and implement the appropriate method to test a hypothesis or address a research question.
- Graduates are able to estimate and interpret univariate and bivariate statistics and generalize their meaning to the appropriate population.

Graduates know how to code and interpret qualitative data or how to code and prepare quantitative data for statistical analysis.
- Graduates have the necessary skills to analyze data and summarize findings including a. basic familiarity with spreadsheet programs and statistical packages, b. the analytic process of comparing across categories, c. how to chart historical trends, and d. how to summarize findings for written or oral presentation.

SOC 339 : Social Organization and Change. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Soc 111 and 310.

DESCRIPTION: Understanding processes of social organization, change, and development in contemporary society.

**Course Outcomes**

There are no course outcomes available

**SOC 340 : Sociology of International Development. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Soc 111 or 112; IAS 220.

DESCRIPTION: Paradigms of development and poverty; international, national, and grass roots approaches to promote development and reduce poverty; and application in developing nations.

**Course Outcomes**

- Become familiar with different theories about development.
- Understand the relationship between development and major social insitutions.
- Learn about what different organizations are doing to promote beneficial development.
- Learn to apply what you have learned to a specific aspect of development.
- Integrate what you have learned to develop your own approach to development.

SOC 345 : World Populations. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Fertility, mortality, and migration patterns of world populations as they relate to current social, economic, political, and religious issues.

**Course Outcomes**

There are no course outcomes available

SOC 422 : Inequality and Society. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: SOC 307 & SOC 310

RECOMMENDED: Soc 404 or 405 or concurrent enrollment.

DESCRIPTION: Distribution of economic and social resources (financial, status, prestige, power, and authority) as they relate to life changes, lifestyle, and social justice.

**Course Outcomes**

There are no course outcomes available

SOC W 585 : Global Issues of Children at Risk. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Analyzing major challenges facing children and their families globally, including poverty, malnutrition, poor health care, gender-based discrimination, child labor and sexual exploitation, AIDS orphans, child soldiers, and refugees.

**Course Outcomes**

There are no course outcomes available

Other courses with the approval of the development coordinator.

**Note:** **These courses may be counted in this section if not already counted in the previous section.

**Note:** ***Students must have completed IAS 220 before doing an internship.

**Note:** Students cannot count both Econ 230 and 431 or Econ 230 and 432. They should choose to take either the 200-level course or the 400-level course.

**Note:** Because the International Development Minor is interdisciplinary, it is critical that students are exposed to multiple disciplinary perspectives and methods as they address the larger topic of international development. Thus, no more than 6 credit hours from any one discipline can be counted toward fulfillment of the minor. The one exception to this is IAS credits through IAS 220, 380R, 397R, or 399R. Counting the required IAS 220, no more than 12 hours of IAS credit can count toward the minor.

*Hours include courses that may fulfill university core requirements.

# International Relations

## The Discipline

International relations is an interdisciplinary major emphasizing the systematic study of political and economic relations between governments and people in different states, as well as comparisons across different political and economic systems. Students majoring in international relations also come to understand the historical and geographic basis for current international relationships.

## Career Opportunities

The international relations major gives students a strong liberal arts education along with useful technical skills. In addition to substantive knowledge, international relations majors will learn analytical concepts and ideas that allow them to organize, explain, and make sense of relations between states and comparisons among them. High proficiency in math and statistics, writing, and a foreign language will prepare for a wide variety of career paths—including, but not limited to, government, law, business, and international organizations. Many career paths will require graduate-level training. Therefore, the international relations degree should be seen as certifying fluency in the ideas and methods of multiple fields so that students can find and pursue their own specialized interests rather than as a terminal degree.

It is important to distinguish international relations as a field from a more general definition of "international," which might include anything (people, language, culture, traditions, etc.) beyond the territorial boundaries of the United States. For students interested in the broad study of anything international and foreign, BYU's international relations degree will not provide the best training. In fact, no reasonable degree can include the systematic study of everything international and foreign. It should be remembered that BYU students have a wealth of options through which to pursue their particular international and foreign interests. These include:

- Social science majors with a strong international component, such as economics, geography, history, or political science.
- Area studies majors, including Asian, European, Latin American, Ancient Near Eastern, and Middle East studies.
- Foreign Language majors.
- Other majors combined with a minor in one of the above areas.

## Program Requirements | View MAP

1. No double counting courses within the major unless noted otherwise.
2. Complete the following introductory core courses:

ECON 110 : Economic Principles and Problems. (3:3:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

: Honors Economic Principles and Problems.

**Course Outcomes**

GEOG 120 : Geography and World Affairs. (3:3:0)
OFFERED: Honors also. Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Survey of the world, stressing geography of major political regions.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

3. Complete one of the following:

POLI 150 : Comparative Government and Politics. (3:3:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
DESCRIPTION: Patterns of European, Asian, Latin American, and other political systems.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

POLI 250 : Principles of Comparative Politics. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: Poli 200.
DESCRIPTION: An introduction to the subfield of comparative politics for advanced students and majors. Basic concepts, theories, and methods of comparative politics and political science.

**Course Outcomes**
There are no course outcomes available

4. Complete one of the following:

POLI 170 : Introduction to International Politics. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
DESCRIPTION: Basic forces, practices, institutions, and foreign policies of major powers; problem areas in international politics.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 270 : Principles of International Relations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: Poli 200.

DESCRIPTION: An introduction to the subfield of international relations for advanced students and majors. Basic concepts, theories, and methods of international relations and political science.

**Course Outcomes**

There are no course outcomes available

5. Complete the following research foundations and methods courses:

POLI 200 : Political Inquiry. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Methodology of political science, including theory and techniques of qualitative and quantitative research design.

NOTE: Prerequisite to all upper-division courses.

**Course Outcomes**

There are no course outcomes available

**And** complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

**Course Outcomes**

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

**Course Outcomes**

**And** complete one of the following options:

**Either**

ECON 378 : Statistics for Economists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ECON 110 & MATH 112

DESCRIPTION: Introduction to matrix algebra and statistics in preparation for regression analysis. Other topics include: probability, random variables, density and distribution functions, estimation, hypothesis testing.

**Course Outcomes**

- Demonstrate an understanding of the basic principles and terminology of probability, simple distribution theory, statistics, and matrix algebra in preparation for a successful introduction to econometric methods in Economics 388. These principles and concepts include:The language, intuition, and notation necessary to understand basic approaches to probability, including basic combinatoric counting techniques, the additive and multiplicative laws of probability, conditional probability and independence, the law of total probability, and Bayes' rule, and to solve basic probability problems using these techniques.Random variables, both univariate and bivariate, including: distribution functions, density functions, conditional density, expected values, variance, covariance, and correlation coefficients. Specific examples of useful random variables.Statistics and sampling distributions.Law of Large Numbers and Central Limit Theorem. Parameter estimators and their derivation using the Method of Moments and Method of Maximum Likelihood.Statistical inference, including the idea of sampling error, sampling distributions, the construction of confidence intervals, and formal hypothesis tests.Basic matrix theory and the properties of matrix operations, including addition, subtraction, matrix products, matrix determinants, and matrix inversion.Use these statistical

techniques to analyze data in diverse applications. Recognize the usefulness of statistics in a variety of career fields.

ECON 388 : Introduction to Econometrics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 378 & ECON 380; or STAT 201 & MATH 313 & ECON 380

DESCRIPTION: Mathematical and statistical techniques used in estimating, predicting, and testing hypotheses associated with quantifiable economic relationships.

**Course Outcomes**

- Demonstrate an understanding of the theoretical foundations of estimating and testing the basic regression model, employing tools from matrix algebra, calculus, and statistics.Perform basic regression and testing procedures using Stata. Complete an empirical research project that includes the following elements:.Formulate an econometric model.Collect and prepare relevant data for use in estimating the model.Use appropriate methods of estimation.Test relevant behavioral hypotheses.Understand and test the Gauss-Markov assumptions.Analyze and interpret the estimated model.Prepare a written report summarizing the research results.

(This course can double count for an elective under specialization B and G)

**Or**

POLI 328 : Statistical Analysis. (4:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: POLI 200

DESCRIPTION: Quantitative techniques in political research.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

6. Complete the following:

ECON 380 : Intermediate Price Theory 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 110 & MATH 112

DESCRIPTION: Producer, consumer, and equilibrium theories; mathematical techniques of unconstrained and constrained optimization introduced and applied extensively.

**Course Outcomes**

- Recognize the common building blocks of economic models (actors, choices, objectives, constraints)Solve economic models (constrained optimization, equilibrium conditions) Interpret the results (comparative statics)Explain concepts using graphs, prose, and mathematical analysis
- ConsumerThe axioms upon which standard microeconomic consumer theory is based.The implications of consumer demand including price and income responses in absolute and elasticity forms in both utility maximization and expenditure minimization problems.FirmsThe meaning and representation of technologyThe implications of cost and profit maximization for firmsMarketsIntegrate consumers and producers into a market in order to perform market analysis on equilibrium traded quantities and pricesUse market analysis to understand the effects of public policy
- Compare the impact on equilibrium behavior of altering the assumptions of canonical modelsContrast the results of different market imperfections

ECON 381 : Intermediate Macroeconomics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 110 & MATH 112; Math 112 can be concurrent enrollment.

DESCRIPTION: Intermediate macroeconomic theory, emphasizing income, unemployment, and price-level analysis.

**Course Outcomes**

- Demonstrate an understanding of the nature and construction of key macroeconomic data;Demonstrate an understanding of the connection between microeconomics and macroeconomics;Demonstrate an understanding of standard models ofeconomic growthlong-run macroeconomic behaviorshort-run macroeconomic behaviorUse these models to analyze the macroeconomic effects of monetary and fiscal policy changes as well as other economic shocks;Use these models to interpret historical and current events; andDemonstrate an understanding of issues regarding the value and limitations of monetary and fiscal policy.

7. Complete one course from the following:

ECON 431 : Economic Development. (3:3:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: ECON 380; Econ 388 (or concurrent enrollment) or Pl Sc 328.

DESCRIPTION: Microeconomic analysis of the causes of income differences across countries.

**Course Outcomes**

Discuss the labor and consumption patterns among the world's poor.Demonstrate an understanding of how modifying the neoclassical assumptions learned in Econ 380 can affect the welfare implications of markets. In particular, how the welfare implications are affected byExternalities and Public GoodsFixed Costs or Increasing ReturnsPoorly Enforced Property Rights.Discuss the functioning of the credit and capital market:How it relates to alleviating poverty and stimulating economic growth.Why it may be prone to information problems and the implications of those problems.Explain the potential role of government in economic development, especially as it relates to:Public Goods and ExternalitiesEnforcing ContractsCorruptionExplain the importance of labor, health, and education to the lives of those in developing countries and how these fields relate to improving outcomes among the poor.

ECON 432 : Economic Growth. (3:3:0)

PREREQUISITE: ECON 380 & ECON 381

RECOMMENDED: Econ 388.

DESCRIPTION: Theory and evidence relating to economic growth, including physical and human capital accumulation, population, technological change, institutions, and government.

**Course Outcomes**

- Adjust values in one currency to values in another currency controlling for purchasing power parity (PPP) deviations.Demonstrate an understanding of basic dynamic models of economic growth, including:The Solow modelThe Solow model with population growthThe Harrod-Domar modelAK modelsModels of product varietySchumpeterian models.Discuss growth and development accounting, and decompose observed differences across countries into efficiency and technology components.Discuss Lorenz curves and Gini coefficients.Discuss how growth interacts with:Population & demographyHuman capitalTechnical progressOpennessGovernmentInequalityCultureGeography, Climate & Resources.

ECON 458 : International Trade Theory and Applications. (3:3:0)

PREREQUISITE: ECON 380

DESCRIPTION: Microeconomic analysis of why nations trade, who wins and loses from trade, and the costs and benefits of various trade policies.

**Course Outcomes**

- Discuss why all kinds of nations—rich and poor, large and small—gain from international trade.Demonstrate an understanding of comparative advantage and how it creates gains from trade.Analyze the Ricardian model of trade and thereby learn how different technologies in different nations create comparative advantage and gains from trade.Analyze the Heckscher-Ohlin model of trade and thereby learn: 1) How different factor endowments in different nations create comparative advantage and gains from trade, and 2) Why some people lose from trade even though nations as a whole gain from trade.Discuss economies of scale and how they can generate gains from trade.Discuss how trade generates extra gains by reducing market power.Demonstrate an understanding of the main causes and effects of direct foreign investment.Demonstrate an understanding of the main causes and effects of international migration.Discuss how various trade policies affect national welfare and why such policies help some while hurting others.Discuss the politics of trade.

ECON 459 : International Monetary Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ECON 381 & ECON 388; or ECON 381 & PL SC 328

DESCRIPTION: Monetary and macroeconomic aspects of international relations dealing primarily with short-run balance-of-payments disequilibrium and adjustments.

**Course Outcomes**

- Demonstrate a familiarity with the key issues in two broad fields:International Finance, particularly exchange rate behavior, Open Economy Macroeconomics.Discuss the nature of the foreign exchange market, including:It's market organizationThe role of vehicle currenciesThe instruments tradedThe role of arbitrage.Understand and use models of exchange rate behavior:Covered and uncovered interest rate parityLong-run monetary and equilibrium models.Understand financial portfolio theory to the extent that it is useful in explaining exchange rate behavior, including:The determination of risk premiaHow it may explain the "forward bias" puzzle.Discuss the history of the international financial system since the late 1700's.Discuss the international aspects of the national income and product accounts, along with the balance of payments accounts.Apply simple dynamic models of consumption smoothing to the current account.

8. Complete one course from the following:

HIST 393 : U.S. Foreign Relations. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: U.S. diplomatic history from the American revolution to the present; examines major themes and critical events within both domestic and international contexts.

**Course Outcomes**

- Students will be able to explain and analyze the major themes and problems in the making, implementation, and evolution of U.S. foreign relations from 1776 to the present.
- Students will be able to analyze, interpret, and debate the meanings and historical significance of primary source documents.
- Students will be able to produce an original, analytical, and primary source based historical essay examining a key issue, theme, or individual from the history of U.S. foreign relations.

POLI 376 : U.S. Foreign Policy. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Formation, implementation, analysis, and criticism of themes in American foreign policy.

**Course Outcomes**

There are no course outcomes available

9. Complete one of the following international relations courses:

POLI 372 : International Political Economy. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Political implications of international trade, investment, and monetary policies within an increasingly interdependent global context; transnationalism.

**Course Outcomes**

There are no course outcomes available

POLI 373 : International Law. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Nature and function of international law; recognition, succession, jurisdiction rights, and immunities of states; nationality and jurisdiction over nations.

**Course Outcomes**

There are no course outcomes available

POLI 375 : International Organizations. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200.

DESCRIPTION: International institutions; transnational relations; rise of newer political organizations: League of Nations, United Nations, European communities, world religions, multinational corporations, terrorist groups, global regimes.

**Course Outcomes**

There are no course outcomes available

POLI 376 : U.S. Foreign Policy. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Formation, implementation, analysis, and criticism of themes in American foreign policy.

**Course Outcomes**

There are no course outcomes available

POLI 377 : National Security Affairs. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policy, defense strategy, and intelligence.

**Course Outcomes**

There are no course outcomes available

POLI 378 : International Conflict. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 150, 170, 250, or 270; Poli 200.

DESCRIPTION: Causes of war; alliances and empires; military innovation; civil-military relations; fungibility of forces; terrorism; security studies methods; use and misuse of history.

**Course Outcomes**

There are no course outcomes available

POLI 473 : Human Rights. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Causes of human rights violations and societal and state responses; nature, history, and impacts of international human rights norms; ways to define and promote rights.

**Course Outcomes**

There are no course outcomes available

10. Complete one of the following comparative politics courses:

POLI 341 : Western European Politics. (3:3:0)

RECOMMENDED: Poli 200.

DESCRIPTION: Politics and policy in western Europe. State-building, party systems, nationalism, and cooperation among advanced industrial countries in comparative, historical perspective. Social and Christian democracy; European Union.

**Course Outcomes**

There are no course outcomes available

POLI 343 : Comparative Institutional Design. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 150 or 250.

RECOMMENDED: Poli 328.

DESCRIPTION: Studies the rich variety of political institutions around the world, in both developed and developing countries, democracies, and dictatorships, and their implications for policy decisions and political, social and economic outcomes such as political violence, economic development, and democratization.

**Course Outcomes**

There are no course outcomes available

POLI 344 : Comparative Political Economy. (3:3:0)

PREREQUISITE: Poli 150 or 250; Poli 200.

DESCRIPTION: Overview of political economy from a comparative perspective. Classic theorists (Smith, Marx, Schumpeter, etc.); classic questions (industrialization, national economic policy, property, globalization, law, and economics).

**Course Outcomes**

There are no course outcomes available

POLI 347 : Russia/Former Soviet Politics. (3:3:0)

DESCRIPTION: Comparative politics of Russia and Soviet successor states. Development of political systems from common Soviet heritage, emphasizing post-independence politics and institution building.

**Course Outcomes**

There are no course outcomes available

POLI 348 : Government and Politics of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

POLI 352 : African Politics. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Processes of change and development of nation states; African regionalism and relations with other nations; contemporary political issues.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 353 : China: Government and Politics. (3:3:0)

DESCRIPTION: Structure and behavior of politics; contemporary problems.

**Course Outcomes**

There are no course outcomes available

POLI 354 : Japan: Government and Politics. (3:3:0)

DESCRIPTION: Structure and behavior of politics; contemporary problems.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 355 : Canadian Government and Politics. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Growth and development of Canada and its government; Canada's role in the contemporary world

**Course Outcomes**

No outcomes are available at this time.

POLI 357 : Middle East: Political Systems. (3:3:0)

WHEN TAUGHT: Fall; Winter
RECOMMENDED: Poli 200.
DESCRIPTION: Social, philosophical, and religious impact on Middle East political institutions in an era of modernization and conflict.

**Course Outcomes**

There are no course outcomes available

POLI 358 : Latin American Politics. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: Poli 200 or Lt Am 211.
DESCRIPTION: Conceptual and contemporary issues in Latin America's search for political order and economic development.

**Course Outcomes**

There are no course outcomes available

POLI 475 : Civil Wars and Ethnic Violence. (3:3:0)
PREREQUISITE: Poli 200.
RECOMMENDED: Poli 150 or 250; 170 or 270; 328.
DESCRIPTION: Foundations of ethnic and nationalist identities and how they related to civil wars worldwide, emphasizing theoretical explanations of civil wars and their resolution. Key civil war cases examined.

**Course Outcomes**

There are no course outcomes available

11. Achieve proficiency in a foreign language: Students are to complete courses for one language to a specified level with all attendant prerequisites. Some courses may be waived depending upon previous language training. The specific requirements for each language are listed on a separate sheet available from the International and Area Studies Advisement Office or the international relations coordinator. This requirement is waived for international students for whom English is their second language.
12. Specializations: Complete one of the following tracks (no double-counting of major courses allowed):
    a. International Politics

Complete four courses from the following. At least one course must be from history and at least one course from political science.

ANTHR 432 : Economic and Political Institutions. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: Connections between wealth and power: political and legal systems in state and nonstate societies; global expansion of capitalism and technology.

**Course Outcomes**

- This course is designed to enhance student knowledge and skills as a scholar with relation to critical reading within the discipline, intelligent and informed discussion, and writing about past and current issues in global economics.
- Students will gain a working knowledge of political, legal, and economic anthropology as a preparation for the senior thesis, graduate programs, and possible careers in anthropological, political, legal, or economic fields.
- Students will expand their capacities to read with increased comprehension and to write coherently and persuasively in the discipline.
- Students will be given many opportunities to think critically about topics pertinent to the course content and their individual research assignments.
- Students will present their own individual research assignment in both written form and through the venues of a class presentation and discussion of the central themes and tenets as well as methodologies utilized within their individual research project.

COMMS 381 : International Media Systems. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: Communications or international relations major or minor status.
DESCRIPTION: Comparison of media systems in countries and regions outside the United States. Approaches may include media systems analysis, normative theories of the media, and cultural values and norms.

**Course Outcomes**

No outcomes are available at this time.

COMMS 382 : Issues in Global Communication. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: Communications or international relations major or minor status.
DESCRIPTION: Issues relating to communicating in a global village. Approaches may include global information and policy, cultural imperialism, intercultural interaction, and

multinational communication strategies.

**Course Outcomes**

There are no course outcomes available

GEOG 341 : Political Geography. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Spatial analysis of global politics; focus on geopolitics, territory and conflict, nationalism, and the politics of resources.

**Course Outcomes**

There are no course outcomes available

HIST 293 : World War II: A Global Perspective, 1939-1945. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Causes, flow, and consequences of World War II emphasizing the American experience at home and abroad.

**Course Outcomes**

- Students will be able to explain and analyze the history and memory of the global conflict of 1939 to 1945.
- Students will be able to analyze and interpret primary and secondary source documents.
- Students will be able to interpret and discuss the meanings and history and memory.
- Students will be able to formulate historical arguments based on primary sources and place them in a historiographical context.

HIST 307 : Europe Since 1914. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: International affairs and political and economic history of major European countries (including Russia) from World War I to the present.

**Course Outcomes**

- Students will understand and be able to explain and analyze the international affairs and the political, cultural, military, social, and economic history of Europe from the two world wars until the present
- Students will understand how to use and will be able to analyze and interpret primary source documents.
- Students will be able to review, critique, and evaluate historiographical works.
- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to analyze and discuss current events from more than one national viewpoint.

HIST 376 : U.S. History from 1945 to 2000. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Movements and ideas that shaped society, politics, economy, and diplomacy of the United States from 1945 to 2000.

**Course Outcomes**

- Students will be able to explain and analyze the major political, social, diplomatic, economic, cultural, and constitutional developments in U.S. history from 1945 to the present.
- Students will be able to analyze, interpret, and debate the meanings and historical significance of primary source documents.
- Students will be able to produce an original, analytical, and primary source based historical essay examining a key issue, theme, or individual from U.S. history since 1945.

HIST 391 : U.S. in Vietnam, 1945-1975. (3:3:0)

DESCRIPTION: U.S. involvement in the wars in Vietnam from both a domestic and international perspective, focusing on the conflict independently and in context of the broader Cold War.

**Course Outcomes**

- Students will be able to explain and analyze political, social, cultural, diplomatic, and military developments; short- and long-term influences; and ramifications or “lessons” deriving from the U.S. experience during the Vietnam War from 1945 to 1975 from both a domestic and international perspective.
- Students will be able to analyze, interpret, and debate the meanings and historical significance of primary source documents.
- Students will be able to produce an original, analytical, and primary source based historical essay examining a key issue, theme, or individual from the U.S. experience in Vietnam.

HIST 393 : U.S. Foreign Relations. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: U.S. diplomatic history from the American revolution to the present; examines major themes and critical events within both domestic and international contexts.

**Course Outcomes**

- Students will be able to explain and analyze the major themes and problems in the making, implementation, and evolution of U.S. foreign relations from 1776 to the present.
- Students will be able to analyze, interpret, and debate the meanings and historical significance of primary source documents.
- Students will be able to produce an original, analytical, and primary source based historical essay examining a key issue, theme, or individual from the history of U.S. foreign relations.

POLI 270 : Principles of International Relations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: Poli 200.

DESCRIPTION: An introduction to the subfield of international relations for advanced students and majors. Basic concepts, theories, and methods of international relations and political science.

**Course Outcomes**

There are no course outcomes available

POLI 371 : Foreign Policy Analysis. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200; Poli 170 or 270.

DESCRIPTION: Survey of research regarding multiple levels of foreign policy analysis: individual, group, bureaucratic, societal, economic, systemic.

**Course Outcomes**

No outcomes are available at this time.

POLI 373 : International Law. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Nature and function of international law; recognition, succession, jurisdiction rights, and immunities of states; nationality and jurisdiction over nations.

**Course Outcomes**

There are no course outcomes available

POLI 374 : Ethics and International Affairs. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Ethical considerations in study and practice of international politics. Realism, idealism, and other theories of state behavior subjected to ethical standards.

**Course Outcomes**

There are no course outcomes available

POLI 375 : International Organizations. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200.

DESCRIPTION: International institutions; transnational relations; rise of newer political organizations: League of Nations, United Nations, European communities, world religions, multinational corporations, terrorist groups, global regimes.

**Course Outcomes**

There are no course outcomes available

POLI 377 : National Security Affairs. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policy, defense strategy, and intelligence.

**Course Outcomes**

There are no course outcomes available

POLI 378 : International Conflict. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 150, 170, 250, or 270; Poli 200.
DESCRIPTION: Causes of war; alliances and empires; military innovation; civil-military relations; fungibility of forces; terrorism; security studies methods; use and misuse of history.

**Course Outcomes**
There are no course outcomes available

POLI 382 : International Relations of North America. (3:3:0)
DESCRIPTION: Examination and analysis of factors that affect foreign relations of Canada, U.S., and Mexico, emphasizing trade, security, migration, environment.

**Course Outcomes**
There are no course outcomes available

POLI 472 : International Political Economy of Women. (3:3:0)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Effects upon national, international, and developmental policies when women are rendered visible and valued.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
There are no course outcomes available

POLI 473 : Human Rights. (3:3:0)
PREREQUISITE: Poli 200.
DESCRIPTION: Causes of human rights violations and societal and state responses; nature, history, and impacts of international human rights norms; ways to define and promote rights.

**Course Outcomes**
There are no course outcomes available

POLI 475 : Civil Wars and Ethnic Violence. (3:3:0)
PREREQUISITE: Poli 200.
RECOMMENDED: Poli 150 or 250; 170 or 270; 328.
DESCRIPTION: Foundations of ethnic and nationalist identities and how they related to civil wars worldwide, emphasizing theoretical explanations of civil wars and their resolution. Key civil war cases examined.

**Course Outcomes**
There are no course outcomes available

POLI 476 : Terrorism. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: Poli 200.
RECOMMENDED: Poli 150 or 250; 170 or 270; 328.
DESCRIPTION: Defining and conceptualizing terrorism; causes and varieties of terrorism; counterterrorism; the future of terrorism.

**Course Outcomes**
There are no course outcomes available

b. Political Economy

Complete four courses from at least two disciplines. At least two courses must be from economics.

ECON 382 : Intermediate Price Theory 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: ECON 378 & ECON 380; or STAT 201 & MATH 313 & ECON 380
DESCRIPTION: Welfare theory, imperfect information, imperfect competition, uncertainty, externalities, and public goods.

**Course Outcomes**
- Formally express and analyze economic modelsRecognize the common building blocks of economic models (actors, choices, objectives, constraints)Solve economic models (constrained optimization, equilibrium conditions)Interpret the results (comparative statics)Demonstrate an understanding of the core microeconomic models ofPerfect competition in general equilibrium (exchange and production)Monopoly and oligopolyExternalities and public goodsDecision-making under uncertainty (expected utility)Information problems (moral hazard, adverse selection)Adapt models to new scenariosCompare the impact on equilibrium behavior of altering the assumptions of canonical modelsContrast the results of different market imperfectionsEstablish a

knowledge base that will be useful in economic field classesApply models in various real-world examples and identify the positive and normative conclusions in that environment

ECON 388 : Introduction to Econometrics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 378 & ECON 380; or STAT 201 & MATH 313 & ECON 380

DESCRIPTION: Mathematical and statistical techniques used in estimating, predicting, and testing hypotheses associated with quantifiable economic relationships.

**Course Outcomes**

- Demonstrate an understanding of the theoretical foundations of estimating and testing the basic regression model, employing tools from matrix algebra, calculus, and statistics.Perform basic regression and testing procedures using Stata. Complete an empirical research project that includes the following elements:.Formulate an econometric model.Collect and prepare relevant data for use in estimating the model.Use appropriate methods of estimation.Test relevant behavioral hypotheses.Understand and test the Gauss-Markov assumptions.Analyze and interpret the estimated model.Prepare a written report summarizing the research results.

ECON 431 : Economic Development. (3:3:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: ECON 380; Econ 388 (or concurrent enrollment) or Pl Sc 328.

DESCRIPTION: Microeconomic analysis of the causes of income differences across countries.

**Course Outcomes**

- Discuss the labor and consumption patterns among the world's poor.Demonstrate an understanding of how modifying the neoclassical assumptions learned in Econ 380 can affect the welfare implications of markets. In particular, how the welfare implications are affected byExternalities and Public GoodsFixed Costs or Increasing ReturnsPoorly Enforced Property Rights.Discuss the functioning of the credit and capital market:How it relates to alleviating poverty and stimulating economic growth.Why it may be prone to information problems and the implications of those problems.Explain the potential role of government in economic development, especially as it relates to:Public Goods and ExternalitiesEnforcing ContractsCorruptionExplain the importance of labor, health, and education to the lives of those in developing countries and how these fields relate to improving outcomes among the poor.

ECON 432 : Economic Growth. (3:3:0)

PREREQUISITE: ECON 380 & ECON 381

RECOMMENDED: Econ 388.

DESCRIPTION: Theory and evidence relating to economic growth, including physical and human capital accumulation, population, technological change, institutions, and government.

**Course Outcomes**

- Adjust values in one currency to values in another currency controlling for purchasing power parity (PPP) deviations.Demonstrate an understanding of basic dynamic models of economic growth, including:The Solow modelThe Solow model with population growthThe Harrod-Domar modelAK modelsModels of product varietySchumpeterian models.Discuss growth and development accounting, and decompose observed differences across countries into efficiency and technology components.Discuss Lorenz curves and Gini coefficients.Discuss how growth interacts with:Population & demographyHuman capitalTechnical progressOpennessGovernmentInequalityCultureGeography, Climate & Resources.

ECON 458 : International Trade Theory and Applications. (3:3:0)

PREREQUISITE: ECON 380

DESCRIPTION: Microeconomic analysis of why nations trade, who wins and loses from trade, and the costs and benefits of various trade policies.

**Course Outcomes**

- Discuss why all kinds of nations—rich and poor, large and small—gain from international trade.Demonstrate an understanding of comparative advantage and how it creates gains from trade.Analyze the Ricardian model of trade and thereby learn how different technologies in different nations create comparative advantage and gains from trade.Analyze the Heckscher-Ohlin model of trade and thereby learn: 1) How different factor endowments in different nations create comparative advantage and gains from trade, and 2) Why some people lose from trade even though nations as a whole gain from trade.Discuss economies of scale and how they can generate gains from trade.Discuss how trade generates extra gains by reducing market power.Demonstrate an understanding of the main causes and effects of direct foreign investment.Demonstrate an understanding of the main causes and effects of international migration.Discuss how various trade policies affect national welfare and why such policies help some while hurting others.Discuss the politics of trade.

ECON 459 : International Monetary Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ECON 381 & ECON 388; or ECON 381 & PL SC 328

DESCRIPTION: Monetary and macroeconomic aspects of international relations dealing primarily with short-run balance-of-payments disequilibrium and adjustments.

**Course Outcomes**

- Demonstrate a familiarity with the key issues in two broad fields:International Finance, particularly exchange rate behavior, Open Economy Macroeconomics.Discuss the nature of the foreign exchange market, including:It's market organizationThe role of vehicle currenciesThe instruments tradedThe role of arbitrage.Understand and use models of exchange rate behavior:Covered and uncovered interest rate parityLong-run monetary and equilibrium models.Understand financial portfolio theory to the extent that it is useful in explaining exchange rate behavior, including:The determination of risk premiaHow it may explain the "forward bias" puzzle.Discuss the history of the international financial system since the late 1700's.Discuss the international aspects of the national income and product accounts, along with the balance of payments accounts.Apply simple dynamic models of consumption smoothing to the current account.

ECON 478 : Game Theory and Economics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ECON 378 & ECON 380; or STAT 201 & MATH 313 & ECON 380

DESCRIPTION: Application of game theory to study strategic interaction between individuals and organizations. Applications include imperfect competition, insurance markets, and bargaining.

**Course Outcomes**

- Demonstrate an understanding of the game theoretic method of analysis.Define a Nash Equilibrium and discuss refinements of the Nash Equilibrium Concept.Think abstractly and rigorously about strategic interaction.

POLI 344 : Comparative Political Economy. (3:3:0)

PREREQUISITE: Poli 150 or 250; Poli 200.

DESCRIPTION: Overview of political economy from a comparative perspective. Classic theorists (Smith, Marx, Schumpeter, etc.); classic questions (industrialization, national economic policy, property, globalization, law, and economics).

**Course Outcomes**

There are no course outcomes available

POLI 372 : International Political Economy. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Political implications of international trade, investment, and monetary policies within an increasingly interdependent global context; transnationalism.

**Course Outcomes**

There are no course outcomes available

POLI 444 : The Political Economy of Development. (3:3:0)

WHEN TAUGHT: Contact Department.

RECOMMENDED: Econ 110, Poli 200.

DESCRIPTION: Political foundations of growth, providing public goods, and political reform in developing countries. Development and how institutions and culture shape it.

**Course Outcomes**

There are no course outcomes available

**Note:** Completion of the Econ 378/388 sequence for the statistics requirement above will also count as fulfillment of one course in this track.

c. Asian Politics and History

Complete four courses from the following. At least one course must be from political science and one course from history.

ANTHR 348 : Contemporary Japan. (3:3:0)

DESCRIPTION: Using movies and popular media to examine the social structures and family life dynamics of contemporary Japan.

**Course Outcomes**

There are no course outcomes available

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication

systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOG 273 : Southeast Asia. (3:3.0:0)

WHEN TAUGHT: Fall Contact Department

DESCRIPTION: Fundamental issues of geography relating to Southeast Asia, including the extraction and marketing of natural resources, economic development, neighborly relations, and how diffusion has influenced the unique cultural, religious, and linguistic characteristics of the region.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

HIST 231 : Introduction to East Asian History. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Major themes in the history, thought, and culture of Asian societies from antiquity to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, and social developments in the history of China, Korea, and Japan from antiquity to the present
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and discuss the meaning and significance of historical events on contemporary identity and foreign relations.
- Students will be able to analyze historical arguments.

HIST 337 : Pre-modern Korea. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, economic, and social history of Korea from antiquity to 1850.

**Course Outcomes**

- An understanding of the major features of Korean history and culture both in breadth and in depth.
- An understanding of Korean history contextualized both within the framework of Korean history and in relationship to other histories and other constructions of history.
- The ability to think and write about issues in Korean history in a critical and compelling manner.

HIST 338 : Modern Korea. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: Political, economic, and social history of Korea from 1850 to the present.

**Course Outcomes**

- Students will be able to describe the most significant aspects of the polity, economy, society and ideology of Korea from 1850 to the present.
- Students will be able to recognize and analyze change over time in East Asia
- Students will be able to evaluate and apply primary source texts to broad historical themes
- Students will be able to conduct individual research and situate it in the broader historical context

HIST 341 : China Since 1200. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Economic and political foundations of modernity during high Imperial China; challenge of new order from the West; rise of Chinese nationalism, revolution, and development to the present.

**Course Outcomes**

There are no course outcomes available

HIST 344 : Modern Japan. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Main themes in Japanese history from Tokugawa times to the present.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and cultural developments in Japanese history from approximately 1600 to the present.
- Students will be able to analyze and interpret primary source documents.

Students will be able to interpret and discuss the meanings and historical and historiographical value of primary and secondary source texts.
- Students will be able to analyze historical arguments and place them in a historiographical context.

HIST 348 : Modern South East Asia. (3:3:0)

DESCRIPTION: Complex history of the varied nations of this vast area: religion, colonialism, nationalism, independence.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in South East Asia and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.

POLI 348 : Government and Politics of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Comparative analysis of political developments of the major countries of Asia not covered in other country-specific classes.

**Course Outcomes**

There are no course outcomes available

POLI 353 : China: Government and Politics. (3:3:0)

DESCRIPTION: Structure and behavior of politics; contemporary problems.

**Course Outcomes**

There are no course outcomes available

POLI 354 : Japan: Government and Politics. (3:3:0)

DESCRIPTION: Structure and behavior of politics; contemporary problems.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 385 : International Relations of Asia. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policies and international relations of China, Japan, and Northeast and Southeast Asia; historical and contemporary review and analysis.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 386 : Japanese Foreign Policy. (3:3:0)

DESCRIPTION: Process and outcomes of Japan's foreign policy; analysis of its relations with other nations in a historical and contemporary setting.

**Course Outcomes**

There are no course outcomes available

POLI 388 : Chinese Foreign Policy. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Structure and process of foreign policy of the People's Republic of China.

**Course Outcomes**

There are no course outcomes available

d. Latin American Politics and History

Complete four courses from the following. At least one course must be from political science and one course from history.

GEOG 255 : Middle and South America. (3:3:0)

WHEN TAUGHT: Winter Contact Department

DESCRIPTION: Environmental, cultural, economic, and political parameters of Latin American societies.

**Course Outcomes**

- To link how the “5 Themes of Geography” [Location, Place, Human Environment Interaction, Region, and Movement] relate to the overall study of the Latin American realm.
- To gain a working knowledge of the connection of the underlying physical "stage" of Latin America to the distributions of people and their activities.
- To gain an understanding of the geographic structure of Latin America's cultural components including languages, ethnic groups, settlement patterns, and religious beliefs.
- To develop geographic writing and research skills that result in papers that are fluent, relevant, and creative.
- To use other students' input to effectively enhance Latin American geographic understanding through group work and discussions
- To discover the significance of Latin America's increasing impact on the world's economy, as well as the growing Hispanization of the United States and the Church of Jesus Christ of Latter-day Saints

HIST 252 : Modern Latin America. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: National period (1810 to present): independence, institutional development, culture, and inter-American relations.

**Course Outcomes**

- Students will be exposed to the major economic, political, and cultural shifts that shaped the "modern" Latin American state in the nineteenth and twentieth century, as well as its variants, notably the cult of caudillo rule and its twentieth century offshoots
- Students will become conversant with major theoretical arguments and approaches to Latin American history in the contemporary era.
- Students will gain oral proficiency in discussing historiographical and thematic issues in modern Latin America during weekly discussion.
- Students will either broaden their understanding of literature on one topic in Latin American history by way of an intensive literature survey or deepen their knowledge on a particular topic in Latin American history by way of an original research paper.
- Students will make connections between cultural and polotico-economic issues by way of a wide variety of course readings that expose students to literature, as well as traditional historical themes.

HIST 326 : The History of Mexico. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: The historical evolution of Mexico including pre-Colombian civilizations, the Spanish conquest, the colonial era, national formation, and the modern Mexican state. The impact of foreign relations on Mexican society.

**Course Outcomes**

- Students will gain an understanding of the challenges Mexico faced during the transitions from pre-Colomiban empires to the colonial period, as well as from the colonial period to the national era.
- Students will gain an understanding of the principle factors that created and transformed modern Mexican society, principally the Porfiriato, the Mexican Revolution, and the modern Mexican state structure (twentieth century).
- By way of supplementary readings and writing assignments, students will gain a stronger understanding of the social andcultural issues in Mexican history that have been shaped by the nation's unique political and economic conditions.
- Students will explore the scholarship and sources for a single issue in Mexican history, producing a research paper based on primary and secondary sources
- Students will develop oral proficiency in debating controversialhistorical and contemporary issues during class discussion, including debates on decisive factors in the Spanish conquest, immigration, and bi-national solutions to drug trafficking.

HIST 355 : History of Argentina. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Rise of modern Argentina from colonial times, focusing on the dynamic political, economic, social, and cultural developments since independence.

**Course Outcomes**

- Learn and understand more about the historical processes that have shaped the nation of Argentina from colonial times up to the present.
- To be able to discuss and explain those processes through the written and spoken word with clarity, persuasiveness, and proper use of evidence
- To write a well written, organized, and developed term paper using the critical thinking and writing skills of a historian
- To be able to read primary sources and discuss their utility in constructing historical arguments.

HIST 356 : Brazil. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: From 1500 to present, emphasizing relationship between colonial patterns and twentieth-century reality and dilatory transformation of Brazil's political and economic culture.

**Course Outcomes**

- Students will become academically conversant in the major social, economic, and cultural developments of Brazil's history since 1500.
- Students will be able to analyze and evaluate the content and meaning of primary sources, and through critical interpretation, draw reasonable conclusions.
- Students will be able to formulate original historical questions and answer them by careful and systematic research in primary and secondary sources.
- Students will be able to write history that is coherent and persuasive by following discipline's norms for writing and careful documentation.

HIST 358 : Gender and History in Latin America. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: How gender roles have been defined legally, socially, and culturally in Latin America from the colonial period to the present, emphasizing the nineteenth and twentieth centuries.

**Course Outcomes**

- To understand how gender relations and gender roles developed in Latin America from colonial times to the present.
- To be able to discuss and explain those developments through the written and spoken word with clarity, persuasiveness, and proper use of evidence.
- To write a well written, organized, and developed term paper using the critical thinking and writing skills of a historian.
- To be able to read primary sources and discuss their utility in constructing historical arguments.

POLI 358 : Latin American Politics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200 or Lt Am 211.

DESCRIPTION: Conceptual and contemporary issues in Latin America's search for political order and economic development.

**Course Outcomes**

There are no course outcomes available

POLI 380 : International Relations of Latin America. (3:3:0)

PREREQUISITE: Poli 200 or Lt Am 211.

DESCRIPTION: Factors that affect foreign relations of Latin American countries, including the U.S. role, emphasizing intervention, democracy, development, and trade.

**Course Outcomes**

There are no course outcomes available

e. Middle Eastern Politics and History

Complete four courses from at least two disciplines. At least one course must be from history.

ANTHR 340 : Peoples of the Middle East. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Ecology, social organization, and beliefs of nomadic, rural, and urban groups between western Africa and Pakistan.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will gain an introductory level understanding of the variety of cultures, ethnic groups, religious variances, and competing political entities representative of the regions included in the MIddle East. Special emphasis will be placed on applying this knowledge to archaeological and anthropological perspectives, disciplines, and professions.
- Through course assignments, students will increase their skills in creative thinking, analysis of data, research, and writing.
- Through course assignments, students will gain a knowledge and demonstrate their comprehension of the ecologies, social organizations, religious beliefs, and variances between nomadic, rural, and urban groups in the Middle East.

GEOG 271 : Middle East. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Physical and cultural geography of Southwest Asia and North Africa, emphasizing the cultural mosaic, geopolitics, environment, and resources of the region.

**Course Outcomes**

There are no course outcomes available

HIST 240 : Middle East History to 1800. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: History of the Middle East from the rise of of Islam until 1800.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, cultural and religious developments in the Islamic Near East between approximately AD 640-1800.
- Students will be able to analyze and interpret translations of primary source documents from the Islamic Near East.
- Students will be able to analyze historical questions and place them in a historiographical context..

HIST 241 : Middle East History from 1800. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: History of the Middle East in the modern period form 1800; rise of nation states, relationship with West, role of Islam.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in Middle East and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.
- Demonstrate how faith and reason intersect.

HIST 244 : Jewish History: A.D. 70 to the Present. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Jewish diaspora, Jewish life in Moslem and Christian countries; Jewish religious movements; development of Zionism; Jewish communities in modern Israel and the United States.

**Course Outcomes**

- Gain a historical consciousness by demonstrating an understanding of major developments in Jewish and history, and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately and distinguish between questionable and valid historical assertions.
- Demonstrate proficiency in using the historical method of research effectively by skillfully and honestly using interdisciplinary prinary and secondary sources.
- Skillfully integrate sources into a coherent argument expressed through a clear, well-written style and throrough oral communication.
- Recognize anti-Semitic arguments.
- Gain an understanding of the complexities of modern Jewish identity.
- Appreciate the contribution of Jewish people to the world.

MESA 350 : Islam in Contemporary Society. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MESA 250

DESCRIPTION: Islam in modern society: doctrine, practices, institutions, approaches to the challenges of modern life; the rise of fundamentalism.

**Course Outcomes**

- Class on issues which face contemporary Muslims throughout world.

POLI 357 : Middle East: Political Systems. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Poli 200.

DESCRIPTION: Social, philosophical, and religious impact on Middle East political institutions in an era of modernization and conflict.

**Course Outcomes**

There are no course outcomes available

POLI 381 : International Relations of the Middle East. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Interregional relations and conflicts, political economics, Arab nationalism, processes of political change, alliances, and superpower relations.

**Course Outcomes**

No outcomes are available at this time.

POLI 452 : Islam and Politics. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Tensions and accommodations between religion and politics in Muslim nations.

**Course Outcomes**

There are no course outcomes available

POLI 474 : Arab-Palestinian-Israeli Conflict. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Emphasizes historical background, current situation, and alternatives leading to conflict resolution.

**Course Outcomes**

There are no course outcomes available

**Note:** Hist 242 and 243 do not substitute here.

f. European Politics and History

Complete four courses from the following. At least one course must be from political science and one course from history.

GEOG 260 : Europe. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Systematic approach to physical base, social and political problems, economic issues, and regional summary.

**Course Outcomes**

- To use other students input to effectively enhance European geographic understanding.
- To demonstrate the connection of the underlying physical "stage" of Europe to the distributions of people and their activities. This includes studying the locations and distributions of climates, mountains, rivers, and natural barriers of the region.
- To comprehend the regional geographic structure of Europe's cultural components including languages, demographics, ethnic groups, and religious beliefs.
- To explicate and define the important historical and contemporary geographic linkages in Europe including settlement structure and major industries (e.g., agriculture, manufacturing, tourism, and transportation).
- To become knowledgeable concerning the ongoing geographical manifestations of political and economic restructuring in the modern era. Emphasis will be given to the formation and spread of the European Union.
- To grasp how the “5 Themes of Geography” [Location, Place, Human Environment Interaction, Region, and Movement] relate to our overall studies of the European realm.
- To write geographic research that is fluent, relevant, and creative.

GEOG 265 : Russia and the Former Soviet Union. (3:3:0)

DESCRIPTION: Physical features, resources, political issues, economy and industries, population concerns, and role in world affairs.

**Course Outcomes**

- To use other students input to effectively enhance geographic understanding of the region.
- To comprehend the regional geographic structure of the region's cultural components including languages, demographics, ethnic groups, and religious beliefs.
- To explicate and define the important historical and contemporary geographic linkages in the region including settlement structure and major industries (e.g., agriculture, manufacturing, tourism, and transportation).
- To become knowledgeable concerning the ongoing geographical manifestations of political and economic restructuring in the modern era, including relationship to the European Union and other political entities.
- To grasp how the “5 Themes of Geography” [Location, Place, Human Environment Interaction, Region, and Movement] relate to our overall studies of this region.
- To demonstrate the connection of the underlying physical "stage" of the region to the distributions of people and their activities. This includes studying the locations and distributions of climates, mountains, rivers, and natural barriers of the region.
- To write geographic research that is fluent, relevant, and creative.

HIST 307 : Europe Since 1914. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: International affairs and political and economic history of major European countries (including Russia) from World War I to the present.

**Course Outcomes**

- Students will understand and be able to explain and analyze the international affairs and the political, cultural, military, social, and economic history of Europe from the two world wars until the present

- Students will understand how to use and will be able to analyze and interpret primary source documents.
- Students will be able to review, critique, and evaluate historiographical works.
- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to analyze and discuss current events from more than one national viewpoint.

HIST 309 : European Revolutions Since 1500. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Social and political revolutions in European history since 1500. Successful and unsuccessful cases of state breakdown; the Dutch Revolt, English Revolution, French Revolution, Revolution of 1848, and Russian Revolution.

**Course Outcomes**

- Students will gain a historical consciousness by demonstrating knowledge about crisis and change in European societies.
- Students will acquire the ability to evaluate and analyze historical documents
- Students will understand the way evidence is used to construct historical arguments.
- Students will gain experience collaborating with each other in formulating and carrying out a research project using historical research skills.

HIST 310 : European Economic History. (3:3:0)

WHEN TAUGHT: Spring Odd Yrs.

DESCRIPTION: Economic development of Europe from antiquity to the early twentieth century; impact of the economy on social and political institutions.

**Course Outcomes**

- Students will acquire content knowledge about the economic history of Europe from antiquity to the present
- Students will master the skills necessary to summarize, evaluate, and critique historical arguments.
- Students will understand the way evidence is used to construct historical arguments.
- Students will pose historical questions and support them with appropriate evidence
- Students will gain experience collaborating with each other in formulating and carrying out a research project using historical research skills.

HIST 312 : History of Ideas. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Interrelationship of influential ideas and historical events from the end of the eighteenth century to the present.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Recognize the usefulness, but also the problematic nature of historical periodization.
- Develop interdisciplinary, synthetic, thinking skills, particularly in being able to see history in cultural artifacts and then identify and place these into discursive contexts.
- Relate and trace how ideas continue to influence societies and their institutions
- Awaken in you the realization of how certain modes of modern thought that you might have taken for granted as having existed "forever" can be seen as developments in response to specific historical circumstances.
- Explain how ideas, when extended to their logical conclusions, may challenge your personal world view and consider, as well as articulate, how to resolve such conflicts.
- Write an intellectual history research paper.
- Identify broadly how different approaches to intellectual history operate, e.g. Lovejoy, Cambridge School (Skinner), Berlin, Koselleck, Strauss, etc.

HIST 318 : European Women's History. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

RECOMMENDED: Hist 200.

DESCRIPTION: European women and gender from 1400 to the present.

**Course Outcomes**

- Students will be able to understand and explain major trends in European women's experiences and history since 1400
- Students will be able to analyze and synthesize historiographyof women's history, gender history, and feminism
- Students will read, analyze, and write about primary and secondary sources and explain their connections to one another
- Students will interpret important shifts or trends in the experience of women and attitudes about gender. Students will apply this understanding to the legal, religious, and culture contexts for those shifts or trends
- Working in tandem with each other students will have opportunities to question, investigate, and interrogate contemporary attitudes to women and men's history and gender and how these affect interpretations of the past.

HIST 323 : English History Since 1689. (3:3:0)

DESCRIPTION: Emergence of Britain as a great colonial and industrial power, as well as more recent decline of Britain's influence. Emphasis also on cultural developments.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in England Since 1689.
- Students will be able to analyze and interpret primary source documents
- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers.
- Students will be able to analyze historical questions and place them in a historiographical context.

HIST 324 : France. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: French history from Roman times to the present, emphasizing the French Revolution, Napoleon, and subsequent developments.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in French history between approximately 700 and 1950.
- Students will be able to analyze and interpret primary source documents.
- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers.
- Students will be able to analyze historical questions and place them in a historiographical context.

HIST 325 : Spain. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Political, social, and economic factors in Spanish history from Roman times to present. Emphasis on Reconquest, Golden Age, and Civil War.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, intellectual, and cultural developments in Spain from Roman times to the late twentieth century
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills.
- Students will analyze historical questions and place them in historiographical context.

HIST 327 : Italy in the Modern World Since 1848. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Political, social, economic, and cultural history of Italians and the Italian peninsula in Europe and the world, including nationalism, church and state, migration, Mafia, fascism, and European union.

**Course Outcomes**

- Students will understand and be able to explain and analyze contemporary Italian history, including themes of economic development, state formation, fascism, internationalism, and church/state relations.
- Students will understand and will be able to analyze and interpret primary source documents and secondary historiographical works.
- Students will understand how to research and write.
- Students will be able to analyze, interpret, and debate with their peers in a classroom setting the meanings and historical value of theory, art, media, and primary source texts.
- Students will be able to analyze historical questions and place them in a historiographical context.
- Students will be able to present a topic and argument in class with multimedia and discussion

HIST 328 : Modern Germany. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Political, military, economic and cultural development of Germany during the nineteenth and twentieth centuries.

**Course Outcomes**

- Understand how historians interpret the German past.
- Alert you to how historians construct their narratives.
- Read and dismantle primary and secondary sources.
- Synthesize material from interdisciplinary sources.
- Show essay skills by writing timed essays on a set of primary and secondary sources.
- Demonstrate your ability to use primary sources in a research project.

HIST 331 : Soviet Union and Post-Soviet Russia. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: History of the Soviet Union and post-Soviet developments in Russia and other successor states; governing structures and ideology and the relationship between state and society.

**Course Outcomes**

There are no course outcomes available

HIST 332 : Scandinavian History. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Political, social, religious, cultural, and economic factors in Denmark, Finland, Iceland, Norway, and Sweden from Viking era to present highly developed society.

**Course Outcomes**

- Students will be able to learn about Scandinavian history from prehistoric times through to the Viking Age, Middle Ages/Renaissance to the Era of Swedish Great Power Politics and Great Northern War, in the 1600s and early 1700s.
- Students will be able to learn about the big picture of Scandinavian history from the period of the Napoleonic Wars (esp. Napoleon's erstwhile general, Bernadotte, later King of Sweden-Norway), Industrialization of the North, nationalistic movements and periods of Swedish-Norwegian and russo-Finnish union, through the World Wars and establishment of the Modern Welfare state (since the 1920s)

POLI 341 : Western European Politics. (3:3:0)

RECOMMENDED: Poli 200.

DESCRIPTION: Politics and policy in western Europe. State-building, party systems, nationalism, and cooperation among advanced industrial countries in comparative, historical perspective. Social and Christian democracy; European Union.

**Course Outcomes**

There are no course outcomes available

POLI 347 : Russia/Former Soviet Politics. (3:3:0)

DESCRIPTION: Comparative politics of Russia and Soviet successor states. Development of political systems from common Soviet heritage, emphasizing post-independence politics and institution building.

**Course Outcomes**

There are no course outcomes available

POLI 351 : British Government and Politics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200.

DESCRIPTION: Examination of the origin and contemporary operation of British political institutions as they relate to British society.

**Course Outcomes**

There are no course outcomes available

g. Economic and Political Development

Complete the following (3 hours):

ECON 431 : Economic Development. (3:3:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: ECON 380; Econ 388 (or concurrent enrollment) or Pl Sc 328.

DESCRIPTION: Microeconomic analysis of the causes of income differences across countries.

**Course Outcomes**

- Discuss the labor and consumption patterns among the world's poor.Demonstrate an understanding of how modifying the neoclassical assumptions learned in Econ 380 can affect the welfare implications of markets. In particular, how the welfare implications are affected byExternalities and Public GoodsFixed Costs or Increasing ReturnsPoorly Enforced Property Rights.Discuss the functioning of the credit and capital market:How it relates to alleviating poverty and stimulating economic growth.Why it may be prone to information problems and the implications of those problems.Explain the potential role of government in economic development, especially as it relates to:Public Goods and ExternalitiesEnforcing ContractsCorruptionExplain the importance of labor, health, and education to the lives of those in developing countries and how these fields relate to improving outcomes among the poor.

**Note:** This course cannot be double-counted for the 400-level economics course in the core; Econ 388 is the preferred route to fill the statistics prerequisite for this course.

Complete three courses from the following, of which one course must be from political science:

ECON 388 : Introduction to Econometrics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ECON 378 & ECON 380; or STAT 201 & MATH 313 & ECON 380

DESCRIPTION: Mathematical and statistical techniques used in estimating, predicting, and testing hypotheses associated with quantifiable economic relationships.

**Course Outcomes**

- Demonstrate an understanding of the theoretical foundations of estimating and testing the basic regression model, employing tools from matrix algebra, calculus, and statistics.Perform basic regression and testing procedures using Stata. Complete an empirical research project that includes the following elements:.Formulate an econometric model.Collect and prepare relevant data for use in estimating the model.Use appropriate methods of estimation.Test relevant behavioral hypotheses.Understand and test the Gauss-Markov assumptions.Analyze and interpret the estimated model.Prepare a written report summarizing the research results.

ECON 432 : Economic Growth. (3:3:0)

PREREQUISITE: ECON 380 & ECON 381

RECOMMENDED: Econ 388.

DESCRIPTION: Theory and evidence relating to economic growth, including physical and human capital accumulation, population, technological change, institutions, and government.

**Course Outcomes**

- Adjust values in one currency to values in another currency controlling for purchasing power parity (PPP) deviations.Demonstrate an understanding of basic dynamic models of economic growth, including:The Solow modelThe Solow model with population growthThe Harrod-Domar modelAK modelsModels of product varietySchumpeterian models.Discuss growth and development accounting, and decompose observed differences across countries into efficiency and technology components.Discuss Lorenz curves and Gini coefficients.Discuss how growth interacts with:Population & demographyHuman capitalTechnical progressOpennessGovernmentInequalityCultureGeography, Climate & Resources.

ECON 440 : Natural Resources and Environmental Economics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ECON 380 & ECON 388

RECOMMENDED: Econ 382.

DESCRIPTION: Economic theory applied to allocation of natural resources and environmental amenities. Issues relating to externalities, common property resources, public goods, allocation of depletable natural resources over time, economic factors of environmental polarization, and others.

**Course Outcomes**

- Utilize economic principles and models to address private and public policy issues related to allocating natural resources and environmental amenities.Demonstrate an active understanding of the following elements of economic theory as it relates to natural resource and environmental economics:Welfare economics and concepts of Pareto optimality, efficiency, and equityThe role of property, property rights, and the bundle of rights conceptThe role of externalities, common property resources, and public goodsConcepts and measures of economic value including non-market valuation.Demonstrate a basic knowledge of the role of markets and market failure with regards to the allocation of natural resources and environmental amenities.Gain a basic understanding of the effects and relative merits of public environmental policy efforts, including cap-and-trade schemes, Pigovian taxes, regulation, and public ownership and/or management.Become knowledgeable about and be able to use economic principles and non-market valuation techniques to address a variety of continuing and contemporary natural resource and environmental issues. These issues may include, but are not exclusive to:Population growth and the environmentGlobal warmingWilderness protection and related public lands issuesAir pollution and public healthIntergenerational allocation of soil, forest, and other depleteable natural resourcesImpacts of environmental features on property values.

ECON 458 : International Trade Theory and Applications. (3:3:0)

PREREQUISITE: ECON 380

DESCRIPTION: Microeconomic analysis of why nations trade, who wins and loses from trade, and the costs and benefits of various trade policies.

**Course Outcomes**

- Discuss why all kinds of nations—rich and poor, large and small—gain from international trade.Demonstrate an understanding of comparative advantage and how it creates gains from trade.Analyze the Ricardian model of trade and thereby learn how different technologies in different nations create comparative advantage and gains from trade.Analyze the Heckscher-Ohlin model of trade and thereby learn: 1) How different factor endowments in different nations create comparative advantage and gains from trade, and 2) Why some people lose from trade even though nations as a whole gain from trade.Discuss economies of scale and how they can generate gains from trade.Discuss how trade generates extra gains by reducing market power.Demonstrate an understanding of the main causes and effects of direct foreign investment.Demonstrate an understanding of the main causes and effects of international migration.Discuss how various trade policies affect national welfare and why such policies help some while hurting others.Discuss the politics of trade.

ECON 459 : International Monetary Theory. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ECON 381 & ECON 388; or ECON 381 & PL SC 328

DESCRIPTION: Monetary and macroeconomic aspects of international relations dealing primarily with short-run balance-of-payments disequilibrium and adjustments.

**Course Outcomes**

- Demonstrate a familiarity with the key issues in two broad fields:International Finance, particularly exchange rate behavior, Open Economy Macroeconomics.Discuss the nature of the foreign exchange market, including:It's market organizationThe role of vehicle currenciesThe instruments tradedThe role of arbitrage.Understand and use models of exchange rate behavior:Covered and uncovered interest rate parityLong-run monetary and equilibrium models.Understand financial portfolio theory to the extent that it is useful in explaining exchange rate behavior, including:The determination of risk premiaHow it may explain the "forward bias" puzzle.Discuss the history of the international financial system since the late 1700's.Discuss the international aspects of the national income and product accounts, along with the balance of payments accounts.Apply simple dynamic models of consumption smoothing to the current account.

GEOG 255 : Middle and South America. (3:3:0)

WHEN TAUGHT: Winter Contact Department

DESCRIPTION: Environmental, cultural, economic, and political parameters of Latin American societies.

**Course Outcomes**

- To link how the "5 Themes of Geography" [Location, Place, Human Environment Interaction, Region, and Movement] relate to the overall study of the Latin American realm.
- To gain a working knowledge of the connection of the underlying physical "stage" of Latin America to the distributions of people and their activities.
- To gain an understanding of the geographic structure of Latin America's cultural components including languages, ethnic groups, settlement patterns, and religious beliefs.
- To develop geographic writing and research skills that result in papers that are fluent, relevant, and creative.
- To use other students' input to effectively enhance Latin American geographic understanding through group work and discussions
- To discover the significance of Latin America's increasing impact on the world's economy, as well as the growing Hispanization of the United States and the Church of Jesus Christ of Latter-day Saints

GEOG 271 : Middle East. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Physical and cultural geography of Southwest Asia and North Africa, emphasizing the cultural mosaic, geopolitics, environment, and resources of the region.

**Course Outcomes**

There are no course outcomes available

GEOG 272 : East Asia. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Region of monsoon Asia and its basic human (demographics, nations and ethnic groups, settlement patterns, religious beliefs, transportation and communication systems, political structures), and physical geographic characteristics (land forms, physiography, climatic characteristics, and natural resources).

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOG 273 : Southeast Asia. (3:3.0:0)

WHEN TAUGHT: Fall Contact Department

DESCRIPTION: Fundamental issues of geography relating to Southeast Asia, including the extraction and marketing of natural resources, economic development, neighborly relations, and how diffusion has influenced the unique cultural, religious, and linguistic characteristics of the region.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GEOG 285 : Africa South of the Sahara. (3:3:0)

WHEN TAUGHT: Winter Contact Department

DESCRIPTION: Geographical analysis focusing on resource management, political issues, development, environmental problems, economic development, and urban-rural change; case studies from selected countries.

**Course Outcomes**

There are no course outcomes available

POLI 357 : Middle East: Political Systems. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Poli 200.

DESCRIPTION: Social, philosophical, and religious impact on Middle East political institutions in an era of modernization and conflict.

**Course Outcomes**

There are no course outcomes available

POLI 358 : Latin American Politics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200 or Lt Am 211.

DESCRIPTION: Conceptual and contemporary issues in Latin America's search for political order and economic development.

**Course Outcomes**

There are no course outcomes available

POLI 444 : The Political Economy of Development. (3:3:0)

WHEN TAUGHT: Contact Department.

RECOMMENDED: Econ 110, Poli 200.

DESCRIPTION: Political foundations of growth, providing public goods, and political reform in developing countries. Development and how institutions and culture shape it.

**Course Outcomes**

There are no course outcomes available

POLI 452 : Islam and Politics. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Tensions and accommodations between religion and politics in Muslim nations.

**Course Outcomes**

There are no course outcomes available

POLI 472 : International Political Economy of Women. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Effects upon national, international, and developmental policies when women are rendered visible and valued.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

**Note:** Completion of the Econ 378/388 sequence for the statistics requirement above will also count as fulfillment of one course in this track.

With the prior approval of the international relations coordinator, a maximum of 3 hours of IR 398R, 399R, or IAS 351R may be used toward meeting the four-course requirement of specialization. Only the second semester of IAS 351R would be allowed.

13. Complete a capstone research experience in one of the following ways:

ASIAN 495 : Senior Seminar. (1:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Senior status or program coordinator's consent.

DESCRIPTION: Learning research and writing skills necessary to prepare and present major senior research paper.

NOTE: Most all major requirements should be completed before registering for this course.

**Course Outcomes**

- In this course, you will learn how to complete a significant research project using appropriate methods of research, analysis, and a professional standard of writing. In doing so, you will draw heavily from your knowledge from previous courses.

You will do this by studying a specialized topic in Asian Studies under the guidance of a professor. Thus, you will deepen your familiarity with a sub-field within Asian Studies and Asian Studies more broadly.
- You will also learn how to present your findings in a high-quality oral presentation, and how to give and receive appropriate feedback within a community of scholars.

LT AM 495 : Senior Seminar in Latin American Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Instructor's consent for minors.
DESCRIPTION: Sources, materials, and methods of research and writing; critical analysis of a research project.
NOTE: Required for all Latin American Studies majors their senior year.

**Course Outcomes**

- This a capstone course taylored to individual research and study topics.

MESA 495 : Senior Seminar in Middle East Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: PL SC 200 & ARAB 302
DESCRIPTION: Capstone course, including major research paper demonstrating ability to integrate cross-disciplinary information and methodology.

**Course Outcomes**

- The Capstone Seminar is the final course in the major. It combines in-depth research on a narrow topic with a research, analysis and writing of a substantive research paper in multiple drafts utilizing peer reviews at two stages, an oral presentation of findings, and research utilizing Arabic sources.

POLI 450 : Research Project in Comparative Politics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: POLI 150 & POLI 200; or POLI 250 & POLI 200; or instructor's consent.
DESCRIPTION: Advanced research skills and advanced writing for students in their junior year.

**Course Outcomes**

There are no course outcomes available

POLI 470 : Research Project in International Relations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: POLI 170 & POLI 200; or POLI 270 & POLI 200; or instructor's consent.
DESCRIPTION: Advanced research skills and advanced writing for students in their junior year.

**Course Outcomes**

There are no course outcomes available

**Note 1:** Only MESA 495, Poli 450, or Poli 470 can fill the GE Advanced Written and Oral Communication requirement when coupled with Poli 200.

**Note 2:** For students in the relevant specialization, Asian 495, Lt Am 495, and MESA 495 will satisfy the capstone requirement.

**Note 3:** It may be possible to fulfill the capstone requirement by completing a professional quality research project. Students who wish to do this must receive *prior* approval of the IR coordinator.

**Note 4:** Students majoring in international relations may not pursue a double major or minor in either economics or political science because of the course overlap between international relations and those majors.

## Recommended

**Either** Hist 201, 202
**Or** Poli 201, 202.

Rel C 351.

*Hours include courses that may fulfill university core requirements.

## Undergraduate Courses

**300-Level Courses**

IR 398R : Directed International Study. (1-3:Arr:0.0)
PREREQUISITE: Instructor's consent; international relations major coordinator's consent.
DESCRIPTION: Study and research in an international setting.

**Course Outcomes**
There are no course outcomes available

IR 399R : Academic Internship: International. (.5-12:0:0)
PREREQUISITE: Acceptance into program; international relations major coordinator's consent.
DESCRIPTION: Individualized work or volunteer experience in an international setting.
NOTE: Must be coordinated through International Study Programs.

**Course Outcomes**

- Students will be able to connect and integrate their academic experiences and learning with their work experiences.

# Latin American Studies

## The Discipline

Designed to give a rich background in the languages, culture, and conditions of Latin America, the Latin American Studies program provides a multidisciplinary approach to university education. Courses from BYU's various academic departments (anthropology, Spanish and Portuguese, political science, geography, sociology, history, etc.) teach skills in perceptive reading, analytical thinking, and clear and forceful writing, as well as provide in-depth understanding of Latin American cultures, languages, and history.

Students are invited to consult with their faculty advisor regarding selection of classes.

## Career Opportunities

Excellent career opportunities exist for those who prepare well in Latin American Studies. The degree offers a broad, general background in the liberal arts, and graduates are well prepared for careers in government, private industry, nonprofit organizations, some domestic and foreign teaching opportunities, the Peace Corps, the military, and other professions in which an understanding and appreciation of Latin America are required. Many graduates go into law, medicine, business, journalism, editing, advertising, etc. Others have had success in government, such as working for the State Department, immigration, the FBI, and other agencies.

Students are encouraged to consider a double major or a strong minor in a single academic discipline to enhance their career objectives. The combination of another discipline and Latin American Studies makes the student attractive to employers desiring specific job skills as well as cultural understanding and appreciation.

## General Information

**Foreign Experience.** Latin American Studies students are strongly encouraged to participate in international study programs in Latin American locations. These programs include Study Abroad, international internships, international field studies, and/or direct enrollment with one of our partner schools. See http://kennedy.byu.edu/isp,index.php for more information.

## Program Requirements | View MAP

1. Courses cannot be double counted between the different requirements sections in the major.
2. Complete the following:

LT AM 211 : Introduction to Latin American Studies. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: History, politics, sociology, geography, and culture of Latin America.

**Course Outcomes**
There are no course outcomes available

3. Complete the following prerequisite courses or equivalents:

**Either**

PORT 101 : First-Year Portuguese. (4:5:1)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Pronunciation, conversation, reading, and fundamentals of grammar. Specific attention to Portuguese as the language of Brazil.
NOTE: Native speakers of Portuguese must enroll in Port 321.

**Course Outcomes**
- Participate in classroom activities in Portuguese.
- Communicate verbally in routine situations such as greeting people and becoming acquainted.
- Understand simple conversations about some familiar, concrete topics such as daily activities, likes and dislikes, family, and home.
- Create simple sentences using basic grammar rules and vocabulary with limited accuracy.
- Read short “cultural blurbs” from the textbook, as well as other short texts such as personal ads, menus, and advertisements.
- Write word- and sentence-length messages such as lists, biographical information on forms, and descriptions of people and things.
- Know basic facts about some Portuguese-speaking countries.
- Identify basic cultural products, practices, and perspectives from Portuguese-speaking countries.

PORT 102 : First-Year Portuguese. (4:5:1)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Port 101.
DESCRIPTION: Pronunciation, conversation, reading, and fundamentals of grammar. Specific attention to Portuguese as the language of Brazil.
NOTE: Native speakers of Portuguese must enroll in Port 321.

**Course Outcomes**
- Participate in classroom activities in Portuguese.
- Participate in conversations about some familiar, concrete topics such as daily activities, family, home, work, and school.
- Understand simple conversations about some familiar, concrete topics such as daily activities, likes and dislikes, family, and home.
- Create simple sentences using basic grammar rules and vocabulary with limited accuracy.
- Read short “cultural blurbs” from the textbook, as well as other short texts such as advertisements, letters, recipes, and stories.
- Know basic facts about some Portuguese-speaking countries.
- Identify basic cultural products, practices, and perspectives from Portuguese-speaking countries.

PORT 201 : Third-Semester Portuguese. (4:5:0)
PREREQUISITE: Port 102 or three units of high school Portuguese.
DESCRIPTION: Second-year grammar, reading, writing, and conversation.
NOTE: Native speakers of Portuguese must take Port 321.

**Course Outcomes**

- Maintain a simple face-to-face conversation about concrete topics such as self, family, friends, and daily activities.
- Handle a simple transactional situation (making purchases, interviewing for a job, etc.)
- Discuss some topics of general interest (school, geography, finances, business, etc.)
- Use grammar principles, including the present, past, and future indicative and subjunctive, with increasing accuracy.
- Understand conversations, announcements, and media reports on familiar topics.
- Read short journalistic and literary texts.
- Write short, simple compositions in a variety of genres (stories, résumés, skits, etc.)
- Know basic facts about some Portuguese-speaking countries.
- Identify basic cultural products, practices, and perspectives from Portuguese-speaking countries.

PORT 202 : Fourth-Semester Portuguese: Reading and Comprehension. (4:5:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Port 201.

DESCRIPTION: Fourth-semester class introducing grammar and culture through study of literature.

NOTE: Not for returned missionaries. Culmination of GE Mathematics/Foreign Language requirement. Native speakers of Portuguese must take Port 321. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Maintain a simple face-to-face conversation about an increasing range of topics of general interest (politics, transportation, the media, the arts, sports, etc.)
- Handle some situations with a complication (resolving disagreements, traffic violations, etc.)
- Use previously-learned grammar principles with increasing accuracy.
- Understand oral conversations, announcements, and media reports about familiar topics.
- Read medium-length journalistic and literary texts on familiar topics, including a short story and a play.
- Write simple compositions in a variety of genres (letters, pamphlets, articles, short stories, etc.).
- Discuss some differences between the cultural norms and perspectives of Americans and Portuguese speakers.
- Discuss some common themes from Portuguese-speaking cultures.

**Or**

SPAN 101 : Foundational Spanish 1. (4:5:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Fundamentals of Spanish, emphasizing communication. (Accelerated sections available.) Pass/fail only.

NOTE: For students with no previous Spanish.

**Course Outcomes**

- Respond in Spanish to simple ques-tions on the most commonfeatures of daily life
- Convey minimal meaning tointerlocutors experiencedwith dealing with foreign-ers by using isolated words,lists of words, memorizedphrases and some personal-ized recombinations ofwords and phrases
- Satisfy a very limited num-ber of immediate needs through the use of spoken Spanish.
- Respond in written Spanish at the same level as indicated in outcomes related to speaking.
- Understand common basic cultural practices and products related to greetings and family life in some Spanish-speaking countries.

SPAN 102 : Foundational Spanish 2. (4:5:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Span 101.

DESCRIPTION: Continuation of Span 101. Fundamentals of Spanish, emphasizing communication. (Accelerated sections available.) Pass/fail only.

**Course Outcomes**

- Using Spanish, participate in simple, directconversations on generallypredictable topics related todaily activities and personalenvironment.
- Create with the languageand communicate personalmeaning to sympatheticinterlocutors by combininglanguage elements in dis-crete sentences and stringsof sentences.
- Obtain and give informationby asking and answeringquestions.
- Sustain and bring to a closea number of basic, uncom-plicated communicativeexchanges, mostly in a reac-tive mode.
- Satisfy simple personalneeds and social demandsto survive in the target lan-guage culture.
- Respond in written Spanish at the same level as indicated in preceding objectives related to spoken Spanish.
- Understand common basic cultural practices and products related to travel in some Spanish-speaking countries.

SPAN 105 : University Spanish 1. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Two years of high school Spanish or Span 101/102 or placement by diagnostic test.

DESCRIPTION: Continued development of grammar, cultural understanding, reading, writing, and conversation skills as introduced in foundational courses. Students are expected to attain an *Intermediate-Mid* proficiency level.

**Course Outcomes**

- Use Spanish to maintain simple verbal conversations on everyday topics.
- Communicate using paragraph level discourse in writing.
- Be understood by sympathetic native speakers despite occasional misunderstandings.
- Describe and narrate in the past present and future a portion of the time.
- Understand that hispanic culture is vast and diverse.
- Demonstrate understanding of and appreciation for Hispanic cultures.

SPAN 106 : University Spanish 2. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Span 105.

DESCRIPTION: Expanded development of grammar, cultural understanding, reading, writing, and conversation skills as introduced in foundational and intermediate courses. Students are expected to attain an *Intermediate-Mid* to *Intermediate-High* proficiency level.

**Course Outcomes**

- Use Spanish to maintain simple verbal conversations on everyday topics.
- Communicate using paragraph level discourse in writing.
- Be understood by sympathetic native speakers despite occasional misunderstandings.
- Describe and narrate in the past present and future a portion of the time.
- Understand that hispanic culture is vast and diverse.
- Demonstrate understanding of and appreciation for Hispanic cultures.

SPAN 205 : University Spanish 3. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Four years of high school Spanish, Span 106, or placement by test.

DESCRIPTION: Continued development of grammar, cultural understanding, conversation skills, writing, and reading through the study of literature. Students are expected to attain an *Intermediate-High* proficiency level.

NOTE: Fulfills the University Core Languages of Learning requirement. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Consolidate the student's understanding of the basic structures of the Spanish language and demonstrate intermediate proficiency in Spanish as defined by the American Council on the Teaching of Foreign Languages (ACTFL) proficiency guidelines for reading, writing, speaking, and listening.
- Provide students with a moderate knowledge of the Spanish language and cultures, thus broadening their perception of humanity and its varied manifestations.
- Interpret and analyze a selection of literary works in Spanish within their historical and cultural context.

SPAN 206 : University Spanish 4. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Spanish 205 or placement by test.

DESCRIPTION: Expanded development of grammar, cultural understanding, conversation skills, writing, and reading through the study of literature. Students are expected to attain a strong *Intermediate-High* or *Advanced-Low* proficiency level.

**Course Outcomes**

- Consolidate the student's command of the basic structures of the Spanish language.
- Develop literacy and oral language skills at the intermediate-advanced range.
- Obtain an adequate knowledge of the Spanish language and cultures through the study of selected perceptions and manifestations.
- Understanding the natural speech of native speakers from any Spanish-speaking country and interpret the general idea in their proper cultural background.

4. Complete one of the following options:

**Either**

PORT 321 : Third-Year Portuguese Reading, Grammar, and Culture. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Placement by test.

NOTE: First class for returned Portuguese-speaking missionaries. Fulfills GE Foreign Language requirement.

**Course Outcomes**

There are no course outcomes available

PORT 355 : Brazilian Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Port 321.

DESCRIPTION: Culture, history, art, music, and traditions of Brazil.

**Course Outcomes**

There are no course outcomes available

**Or**

SPAN 321 : Third-Year Spanish Reading, Grammar, and Culture. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Placement by test.

DESCRIPTION: Intensive study and practice with Spanish grammar, vocabulary, and writings incorporating cultural and literary readings.

NOTE: First class for returned Spanish-speaking missionaries. Fullfills the University Core Languages of Learning requirement. Required for Spanish major and minor.

**Course Outcomes**

There are no course outcomes available

SPAN 355 : Spanish American Culture and Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer Contact Department

PREREQUISITE: Span 321 or concurrent enrollment.

DESCRIPTION: Culture, history, art, music, and traditions of Spanish America.

**Course Outcomes**

There are no course outcomes available

5. Complete three social science courses from the following (no more than one course from each discipline):

GEOG 255 : Middle and South America. (3:3:0)

WHEN TAUGHT: Winter Contact Department

DESCRIPTION: Environmental, cultural, economic, and political parameters of Latin American societies.

**Course Outcomes**

- To link how the “5 Themes of Geography” [Location, Place, Human Environment Interaction, Region, and Movement] relate to the overall study of the Latin American realm.
- To gain a working knowledge of the connection of the underlying physical "stage" of Latin America to the distributions of people and their activities.
- To gain an understanding of the geographic structure of Latin America’s cultural components including languages, ethnic groups, settlement patterns, and religious beliefs.
- To develop geographic writing and research skills that result in papers that are fluent, relevant, and creative.
- To use other students’ input to effectively enhance Latin American geographic understanding through group work and discussions
- To discover the significance of Latin America's increasing impact on the world's economy, as well as the growing Hispanization of the United States and the Church of Jesus Christ of Latter-day Saints

HIST 251 : Conquest and Colonization of Latin America. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Pre-Columbian civilizations, Iberian exploration and conquest of the New World, and colonial development of Hispanic and Portuguese America from 1492 to 1823.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, religious, and cultural characteristics of Spanish and Portuguese colonialism in the Americas between 1492 and 1825.
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills.
- Students will analyze historical questions and place them in historiographical context.

**Or**

HIST 252 : Modern Latin America. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: National period (1810 to present): independence, institutional development, culture, and inter-American relations.

**Course Outcomes**

- Students will be exposed to the major economic, political, and cultural shifts that shaped the "modern" Latin American state in the nineteenth and twentieth century, as well as its variants, notably the cult of caudillo rule and its twentieth century offshoots
- Students will become conversant with major theoretical arguments and approaches to Latin American history in the contemporary era.
- Students will gain oral proficiency in discussing historiographical and thematic issues in modern Latin America during weekly discussion.
- Students will either broaden their understanding of literature on one topic in Latin American history by way of an intensive literature survey or deepen their knowledge on a particular topic in Latin American history by way of an original research paper.
- Students will make connections between cultural and polotico-economic issues by way of a wide variety of course readings that expose students to literature, as well as traditional historical themes.

POLI 358 : Latin American Politics. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: Poli 200 or Lt Am 211.
DESCRIPTION: Conceptual and contemporary issues in Latin America's search for political order and economic development.

**Course Outcomes**

There are no course outcomes available

**Or**

POLI 380 : International Relations of Latin America. (3:3:0)
PREREQUISITE: Poli 200 or Lt Am 211.
DESCRIPTION: Factors that affect foreign relations of Latin American countries, including the U.S. role, emphasizing intervention, democracy, development, and trade.

**Course Outcomes**

There are no course outcomes available

SOC 345 : World Populations. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Fertility, mortality, and migration patterns of world populations as they relate to current social, economic, political, and religious issues.

**Course Outcomes**

There are no course outcomes available

6. Complete two humanities courses from the following:

IHUM 260 : Humanities of Latin America. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Achievements of Latin American culture regarding art, philosophy, literature, and music from the pre-Columbian era to the present.

**Course Outcomes**

There are no course outcomes available

PORT 439R : Luso-Brazilian Theatre Production. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: Theory and practice of dramatic performance. Includes participation in play to be performed during semester.
NOTE: No more than 3 hours of 439R credit may count toward any degree.

**Course Outcomes**

- Demonstrate understanding of the theory and practice of dramatic performances.
- Participate in the production of a play during the course of the semester.
- Develop advanced skills in research techniques and academic writing.

PORT 451 : Survey of Brazilian Literature. (3:3:0)
WHEN TAUGHT: Fall; Winter Contact Department
PREREQUISITE: PORT 339
DESCRIPTION: Literary periods, genres, and great writers of Brazil.

**Course Outcomes**

- Define and recognize the periods, areas of specialization, significant authors, schools or movements of Brazilian literature.
- Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to Brazilian literature.
- Write essays in Portuguese, including a final research paper, that demonstrate an advanced knowledge of the use of language and literary criticism.

SPAN 339 : Introduction to Spanish Literature. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Span 321 or concurrent enrollment.
DESCRIPTION: Readings in modern Hispanic literatures, focusing on formal literary analysis.
NOTE: Course is prerequisite to 400-level literature courses.

**Course Outcomes**

- Demonstrate a working knowledge of the most salient elements of the most important literary genres, including, for example, short story, novel, poetry, theater, essay, and film.
- Students will demonstrate a mastery of basic tools of literary analysis, including versification and basic elements of narratology, and interpretation through the study of a variety of works from authors from

Spain and Spanish America.
- Students will write cogent, persuasive essays of literary interpretation.
- Students will demonstrate the ability to speak and write in Spanish about literature with a reasonable degree of grammatical correctness and fluency.

**Or**

PORT 339 : Introduction to Portuguese and Brazilian Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Port 321.
DESCRIPTION: Readings in modern literature; formal literary analysis.

**Course Outcomes**

- Contextualize and analyze literature written in Portuguese from various genres and periods.
- Acquire and apply the fundamental tools for literary analysis, appreciation, and interpretation through a study of a balanced selection of foundational works from Portugal and Brazil and some areas of Lusophone Africa.
- Demonstrate through written exercises mastery of the basic terms of literary analysis and the formal patterns of fiction (narration, plot, characterization, structure, etc.) drama (tragedy, comedy, dialogue, structure, staging, etc.), and poetry (meter, rhyme, syllabification, figurative language, including tropes and figures).
- Produce several interpretive essays that demonstrate mastery of the formal components of fiction, drama, and poetry, and that reveal competence in library research skills, appropriate use of secondary sources, and proper adherence to MLA bibliographic style.

SPAN 365 : Mexican-American Culture. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: Span 321 or concurrent enrollment.
DESCRIPTION: Contemporary culture (education, popular and fine arts, worldview, attitudes, etc.) of the Mexican-American in the U.S.

**Course Outcomes**

- Recognize and describe important cultural products, such as art, literature, architecture, and music, including important works and individuals, as pertaining to Mexican American culture.
- Describe important cultural institutions, including family and religion.
- Discuss important cultural practices, including customs, traditions, celebrations, festivals, etc
- Analyze recent cultural and social developments, including political, social, religious, and artistic events, placing them in historical context.
- Students should be able to recognize, compare, and evaluate the influence of their own cultural background on their attitudes, beliefs, and worldview, in relation to the Mexican- American world.

SPAN 423 : Border Spanish. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: Span 326 or Span 329.
DESCRIPTION: Mexican-American speech patterns, including language contact and bilingualism.
NOTE: Previous course in linguistics strongly recommended.

**Course Outcomes**

- Students will demonstrate a knowledge of principal features of (Mexican-American) Popular Spanish in terms of semantics, morphosyntax, and phonetics/phonology.
- Students will understand and be able to describe succinctly S-E bilingual contact phenomena, such as borrowing, code-switching, and language maintenance/shift.
- Students will gain a greater understanding of and appreciation for Mexicans and Mexican-Americans living in the U.S.

SPAN 451 : Survey of Hispanic-American Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer, Contact Department
PREREQUISITE: SPAN 339
DESCRIPTION: Literary masterpieces of Spanish America.

**Course Outcomes**

- Understand and properly apply the tools of literary analysis, literary theory as well as other critical and philosophical concepts which may apply to Spanish American literature.
- Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Define and recognize the periods, significant authors, schools or movements of Spanish American literature.
- Recognize and value the contributions, past and present, of Spanish American literature to the cultures of its respective countries.
- Develop the habits and skills of lifelong readers of Spanish American literature.
- Demonstrate and apply a strong understanding of the basic structures of the Spanish language as they apply to literature.
- Write analytical and descriptive essays in Spanish that demonstrate an advanced knowledge of the works studied, a proper command of the Spanish language, mastery of the tools of literary criticism, and familiarity with research methodologies.

SPAN 461 : Spanish-Speaking American (Mexican-American) Literature. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Even Yrs.; Spring Contact Department; Summer Contact Department

PREREQUISITE: SPAN 451
DESCRIPTION: Spanish-English literature of the Mexican-American within the United States.

**Course Outcomes**

- Demonstrate thorough understanding of the history of Mexican-American literary history.
- Develop advanced skills in research techniques and academic writing.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to Mexican-American Literature.

7. Complete at least 6 elective hours from the following:

ANTHR 326 : Guatemalan Society and Culture. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: History, culture, society, and life (economic, familial, religious) among peoples of Guatemala. Guatemala as exemplar of colonial, cultural, and global processes evident throughout Latin America.

**Course Outcomes**

- Using Guatemala as a case, which exemplifies the political, economic, and religious histories of Latin America, students will learn the basic relationships between cultural principles, social structure, environmental constraint, and important symbols in Latin America, and how these were constructed through historical processes of violent and peaceful social interaction.

ANTHR 355 : Mesoamerican Archaeology. (3:2:ARR)
WHEN TAUGHT: Fall
DESCRIPTION: Cultural and environmental bases of ancient civilizations in Mexico and Central America. Olmec, Maya, Toltec, and Aztec cultures.

**Course Outcomes**

- Students will gain knowledge of the major archaeological sites excavated and studied in Meso-America with an emphasis on critiquing archaeological methodologies and theory as they have been applied to specific archaeological sites in the field. Through this study, students will also gain a knowledge of the history and cultural development of the major societies and cultures of this region and the role that archaeology plays in assisting in providing data related to questions associated with the development and decline of these entities.

BUS M 596R : Business Language. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: For experienced speakers of the language being taught. Emphasizes business concepts; practice and case study including conversation, reading,and presenting, while enriching business vocabulary.

**Course Outcomes**

No outcomes are available at this time.

(Spanish or Portuguese)
HIST 251 : Conquest and Colonization of Latin America. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Pre-Columbian civilizations, Iberian exploration and conquest of the New World, and colonial development of Hispanic and Portuguese America from 1492 to 1823.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, religious, and cultural characteristics of Spanish and Portuguese colonialism in the Americas between 1492 and 1825.
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills.
- Students will analyze historical questions and place them in historiographical context.

HIST 252 : Modern Latin America. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: National period (1810 to present): independence, institutional development, culture, and inter-American relations.

**Course Outcomes**

- Students will be exposed to the major economic, political, and cultural shifts that shaped the "modern" Latin American state in the nineteenth and twentieth century, as well as its variants, notably the cult of caudillo rule and its twentieth century offshoots
- Students will become conversant with major theoretical arguments and approaches to Latin American history in the contemporary era.
- Students will gain oral proficiency in discussing historiographical and thematic issues in modern Latin America during weekly discussion.
- Students will either broaden their understanding of literature on one topic in Latin American history by way of an intensive literature survey or deepen their knowledge on a particular topic in Latin American history by way of an original research paper.

- Students will make connections between cultural and polotico-economic issues by way of a wide variety of course readings that expose students to literature, as well as traditional historical themes.

HIST 326 : The History of Mexico. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: The historical evolution of Mexico including pre-Colombian civilizations, the Spanish conquest, the colonial era, national formation, and the modern Mexican state. The impact of foreign relations on Mexican society.

**Course Outcomes**

- Students will gain an understanding of the challenges Mexico faced during the transitions from pre-Colomiban empires to the colonial period, as well as from the colonial period to the national era.
- Students will gain an understanding of the principle factors that created and transformed modern Mexican society, principally the Porfiriato, the Mexican Revolution, and the modern Mexican state structure (twentieth century).
- By way of supplementary readings and writing assignments, students will gain a stronger understanding of the social andcultural issues in Mexican history that have been shaped by the nation's unique political and economic conditions.
- Students will explore the scholarship and sources for a single issue in Mexican history, producing a research paper based on primary and secondary sources
- Students will develop oral proficiency in debating controversialhistorical and contemporary issues during class discussion, including debates on decisive factors in the Spanish conquest, immigration, and bi-national solutions to drug trafficking.

HIST 355 : History of Argentina. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Rise of modern Argentina from colonial times, focusing on the dynamic political, economic, social, and cultural developments since independence.

**Course Outcomes**

- Learn and understand more about the historical processes that have shaped the nation of Argentina from colonial times up to the present.
- To be able to discuss and explain those processes through the written and spoken word with clarity, persuasiveness, and proper use of evidence
- To write a well written, organized, and developed term paper using the critical thinking and writing skills of a historian
- To be able to read primary sources and discuss their utility in constructing historical arguments.

HIST 356 : Brazil. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: From 1500 to present, emphasizing relationship between colonial patterns and twentieth-century reality and dilatory transformation of Brazil's political and economic culture.

**Course Outcomes**

- Students will become academically conversant in the major social, economic, and cultural developments of Brazil's history since 1500.
- Students will be able to analyze and evaluate the content and meaning of primary sources, and through critical interpretation, draw reasonable conclusions.
- Students will be able to formulate original historical questions and answer them by careful and systematic research in primary and secondary sources.
- Students will be able to write history that is coherent and persuasive by following discipline's norms for writing and careful documentation.

HIST 357 : The Indian in Latin American History. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: History of Latin American Indians from preconquest days to the present; achievements, contributions, and problems.

**Course Outcomes**

- Students will be able to explain and analyze the political, economic, social, religious, and cultural structures of the Mayas, Aztecs, and Incas, how they were transformed by the Spanish conquest, and how they developed in reaction to European colonialism.
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills.
- Students will analyze historical questions and place them in historiographical context.

HIST 358 : Gender and History in Latin America. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: How gender roles have been defined legally, socially, and culturally in Latin America from the colonial period to the present, emphasizing the nineteenth and twentieth centuries.

**Course Outcomes**

- To understand how gender relations and gender roles developed in Latin America from colonial times to the present.
- To be able to discuss and explain those developments through the written and spoken word with clarity,

persuasiveness, and proper use of evidence.
- To write a well written, organized, and developed term paper using the critical thinking and writing skills of a historian.
- To be able to read primary sources and discuss their utility in constructing historical arguments.

HIST 359 : Inter-American Relations. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Decline of Europe's American empires, legacies bequeathed to the new republics by their European heritage, and how those legacies have affected relations among the various American republics.

**Course Outcomes**

- Students will gain an understanding of the major historiographical schools of thought in Inter-American relations
- Students will gain an in-depth understanding of at least one major figure in Inter-American relations each term the class is taught by way of reading primary sources and writing about the legacy of that individual.
- Students will be exposed to a variety of thematic approaches to Inter-American relations, including gender, health and the environment, culture, tourism, film, and literature. It is expected that these alternatives to traditional diplomatic relations will inform their selection of a research topic for the course.
- Students will write a research paper focusing on one of the thematic approaches presented in class and informed by primary sources, as well as secondary literature, in order to arrive at a stronger understanding of Inter-American relations.
- Students will obtain a stronger cross-cultural understanding of Inter-American relations by debating and discussing issues, informed by our class readings, during our weekly discussions. At times students will be asked to embrace perspectives that they may not entirely agree with or understand.
- Students will become conversant with the watershed events of the Haitian Revolution, the Latin American Revolutions, the Spanish American War, the Cuban Revolution, and the Washington Consensus,and why they have been critical to the tenor of Inter-American Relations.

HIST 363 : The Spanish Frontier in North America. (3:3:0)

DESCRIPTION: Spanish exploration, occupation, and institutions of northern Mexico, the American southwest, and Florida, 1521-1821; Mexican period to 1848.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in the history of the Spanish and Mexican northern frontier in North America between approximately 1492 and 2011
- Students will be able to analyze and interpret primary source documents
- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers.

HIST 385 : Latinos in the United States. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: The place of Latin Americans within the context of U.S. history. The growth and development of the largest Latino communities from pre-colonial times to present day and how Latinos may influence future policies within the U.S.

**Course Outcomes**

- Students will learn the history of Latinos in this country beginning with the circumstances which brought them to this country, the ways they have integrated or resisted integration, and the efforts they have made to claim their rights as citizens.
- Students will learn to interpret the documents and rhetoric of this community which will help them understand the intellectual, cultural and political thought of Latinos over the last 100 years.
- Students will learn the current state of Latino social and cultural integration in the Utah community.
- Students will learn to write a major essay on the history of Latinos in order to understand the literature as well as the primary sources available on this community.

HIST 424 : Romance Language Handwriting and Documents. (3:3:0)

DESCRIPTION: Interpretation of handwriting in vernacular scripts in the Romance languages of Europe (especially Spanish, French, and Italian), sixteenth through eighteenth centuries, in family history sources.

**Course Outcomes**

- Students will be able to read with fluency documents in italic style handwriting;
- Students will be able to recognize and use documents and understand the legal, ecclesiastical and civil systems behind them;
- Students will be able to understand basic concepts of paleography and the impacts of language on the historical development of handwriting
- Students will be able to develop familiarity with secretary (cortesana or procesal) handwriting

IAS 399R : Academic Internship: International. (.5-9:ARR:ARR)

PREREQUISITE: Acceptance into program.

DESCRIPTION: Individualized work or volunteer experience in an international setting.

NOTE: Class must be coordinated through International Study Programs.

**Course Outcomes**

- · Apply skills and material learned in traditional courses to a real-world workplace environment.· Demonstrate proficiency in the skills required by the internship

supervisor.· Demonstrate an ability to link insights gained from traditional classes and from real-world workplace experiences.

POLI 379R : Topics in International Relations. (.5-3:3:0)

PREREQUISITE: Poli 200 or equivalent.

**Course Outcomes**

There are no course outcomes available

POLI 380 : International Relations of Latin America. (3:3:0)

PREREQUISITE: Poli 200 or Lt Am 211.

DESCRIPTION: Factors that affect foreign relations of Latin American countries, including the U.S. role, emphasizing intervention, democracy, development, and trade.

**Course Outcomes**

There are no course outcomes available

PORT 339 : Introduction to Portuguese and Brazilian Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Port 321.

DESCRIPTION: Readings in modern literature; formal literary analysis.

**Course Outcomes**

- Contextualize and analyze literature written in Portuguese from various genres and periods.
- Acquire and apply the fundamental tools for literary analysis, appreciation, and interpretation through a study of a balanced selection of foundational works from Portugal and Brazil and some areas of Lusophone Africa.
- Demonstrate through written exercises mastery of the basic terms of literary analysis and the formal patterns of fiction (narration, plot, characterization, structure, etc.) drama (tragedy, comedy, dialogue, structure, staging, etc.), and poetry (meter, rhyme, syllabification, figurative language, including tropes and figures).
- Produce several interpretive essays that demonstrate mastery of the formal components of fiction, drama, and poetry, and that reveal competence in library research skills, appropriate use of secondary sources, and proper adherence to MLA bibliographic style.

PORT 355 : Brazilian Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Port 321.

DESCRIPTION: Culture, history, art, music, and traditions of Brazil.

**Course Outcomes**

There are no course outcomes available

PORT 395R : Contemporary Culture. (.5-3:0:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Contemporary Portuguese or Brazilian culture: the people and their customs and institutions.

NOTE: For Study Abroad programs only.

**Course Outcomes**

- Through readings, develop a familiarity with macro forces (historical, political, economical) that have shaped the host culture.
- Through a series of cultural proofs (visits, interviews, observations), develop a familiarity with the host culture at the level of the individual.

PORT 439R : Luso-Brazilian Theatre Production. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Theory and practice of dramatic performance. Includes participation in play to be performed during semester.

NOTE: No more than 3 hours of 439R credit may count toward any degree.

**Course Outcomes**

- Demonstrate understanding of the theory and practice of dramatic performances.
- Participate in the production of a play during the course of the semester.
- Develop advanced skills in research techniques and academic writing.

PORT 451 : Survey of Brazilian Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department

PREREQUISITE: PORT 339

DESCRIPTION: Literary periods, genres, and great writers of Brazil.

**Course Outcomes**

- Define and recognize the periods, areas of specialization, significant authors, schools or movements of Brazilian literature.

Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to Brazilian literature.
- Write essays in Portuguese, including a final research paper, that demonstrate an advanced knowledge of the use of language and literary criticism.

PORT 452 : Machado de Assis. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: PORT 451

**Course Outcomes**

- Demonstrate thorough understanding of Brazilian literary history, the cultural context for the work of Machado de Assis, and the reception of Machado's work.
- Demonstrate ability to apply key terms in critical practice (e.g., practical criticism, structural analysis, hermeneutics, etc.).
- Develop advanced skills in research techniques and academic writing.

PORT 453 : Twentieth-Century Brazilian Literature. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

PREREQUISITE: PORT 451

**Course Outcomes**

- Demonstrate thorough understanding of twentieth-century literary history in Brazil.
- Demonstrate ability to apply key terms in critical practice (e.g., practical criticism, structural analysis, hermeneutics, etc.).
- Develop advanced skills in research techniques and academic writing.

PORT 459R : Special Topics in Brazilian Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PORT 451

DESCRIPTION: Specific topics in Portuguese (Brazilian) literature. Course content will vary each semester to offer optimum exposure to all areas of Brazilian literature.

**Course Outcomes**

- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to Brazilian literary texts.
- Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Develop the habits and skills for Brazilian literary study that inspire continued learning.
- Write essays in Portuguese, including one final research paper, that demonstrate an advanced knowledge of the use of language and literary criticism.

PORT 520 : Advanced Portuguese Grammar. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department

PREREQUISITE: Port 326 or 329.

DESCRIPTION: Applying contemporary grammatical concepts to problems in Portuguese grammar.

**Course Outcomes**

- The student enrolled in Advanced Portuguese Grammar will carefully examine some grammar “problems” by reading and studying selections from grammarians and researchers who provide insights into the problem in question. The student’s ability to synthesize coherent and meaningful generalizations will be objectively tested by exams and further evaluated while he or she participates in classroom discussion.
- The student enrolled in Advanced Portuguese Grammar will acquire a greater understanding of both descriptive and prescriptive grammars and their function and limitations. The student will also acquire specialized terms employed by grammarians and morphosyntacticians. The student’s ability to understand and use these terms appropriately will also be objectively measured by examination.
- Complete a research paper/presentation on a particular grammar point or construction. This assignment will test a student’s ability to locate appropriate refereed sources, read and synthesize them and prepare a written document and oral presentation according to a recognized style manual.

PORT 521 : Romance Philology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Port 326 or 329.

DESCRIPTION: Comparative study of evolution of Latin into modern romance languages.

**Course Outcomes**

- Situate Latin and the Romance Languages in their “external” (i.e. political and literary) historical context.
- Recognize the “laws” of regular phonological evolution (e.g. syncope, lenition, diphthongization, etc.).
- Compare the “major” (i.e. literary) Romance languages as far as their phonological development is concerned.
- Lexical Differences and Etymology
- Become familiar with articles published in professional journals relating to the subject matter and produce accurate and meaningful written summaries and reactions to them.
- Learn the rudiments of transcribing medieval or Renaissance manuscripts.

PORT 522 : History of the Portuguese Language. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department
PREREQUISITE: Port 326 or 329.
DESCRIPTION: Linguistic sources that contributed to formation of Portuguese.

**Course Outcomes**

- Acquire a basic knowledge of the changes undergone by the nominal and verbal systems of Latin and Portuguese (e.g., the demise of the case system, the development of new verbal tenses, etc.).
- Demonstrate the ability to summarize and discuss in a clear and concise manner several scholarly articles on the topic of the history of the Portuguese language.
- Situate Latin and Portuguese in their political and literary historical contexts.
- Recognize the laws of regular phonological development (e.g. syncope, lenition, diphthongization, etc.).
- Identify the sources of the Portuguese lexicon.
- Understand the different theories that claim to understand the relation between Latin and the Romance languages, especially the relation between Latin and Portuguese.
- Understand the process of linguistic standardization in Romance and its implications for the linguistic map of the Iberian Peninsula.

PORT 529R : Special Topics in Portuguese Linguistics. (3:3:0)
WHEN TAUGHT: Fall Contact Department; Winter Contact Department
PREREQUISITE: Port 326 or 329, or instructor's approval.
DESCRIPTION: Topics from semantics to dialectology to sociolinguistics.

**Course Outcomes**

- Read and analyze research articles related to special topic in Portuguese linguistics.
- Produce an original research paper/project centered on the theme of the seminar.

PORT 599R : Academic Internship: Portuguese Internship. (1-3:0:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: Port 321; instructor's consent.
NOTE: For supervised internship credit on BYU Study Abroad programs only.

**Course Outcomes**

- Successfully complete internship in a Portuguese-speaking country.

SOC 345 : World Populations. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Fertility, mortality, and migration patterns of world populations as they relate to current social, economic, political, and religious issues.

**Course Outcomes**

There are no course outcomes available

SPAN 339 : Introduction to Spanish Literature. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Span 321 or concurrent enrollment.
DESCRIPTION: Readings in modern Hispanic literatures, focusing on formal literary analysis.
NOTE: Course is prerequisite to 400-level literature courses.

**Course Outcomes**

- Demonstrate a working knowledge of the most salient elements of the most important literary genres, including, for example, short story, novel, poetry, theater, essay, and film.
- Students will demonstrate a mastery of basic tools of literary analysis, including versification and basic elements of narratology, and interpretation through the study of a variety of works from authors from Spain and Spanish America.
- Students will write cogent, persuasive essays of literary interpretation.
- Students will demonstrate the ability to speak and write in Spanish about literature with a reasonable degree of grammatical correctness and fluency.

SPAN 355 : Spanish American Culture and Civilization. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer Contact Department
PREREQUISITE: Span 321 or concurrent enrollment.
DESCRIPTION: Culture, history, art, music, and traditions of Spanish America.

**Course Outcomes**

There are no course outcomes available

SPAN 365 : Mexican-American Culture. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: Span 321 or concurrent enrollment.
DESCRIPTION: Contemporary culture (education, popular and fine arts, worldview, attitudes, etc.) of the Mexican-American in the U.S.

**Course Outcomes**

Recognize and describe important cultural products, such as art, literature, architecture, and music, including important works and individuals, as pertaining to Mexican American culture.
- Describe important cultural institutions, including family and religion.
- Discuss important cultural practices, including customs, traditions, celebrations, festivals, etc
- Analyze recent cultural and social developments, including political, social, religious, and artistic events, placing them in historical context.
- Students should be able to recognize, compare, and evaluate the influence of their own cultural background on their attitudes, beliefs, and worldview, in relation to the Mexican- American world.

SPAN 395R : Contemporary Culture. (.5-3:ARR:ARR)

WHEN TAUGHT: Contact Department.
DESCRIPTION: Contemporary Spanish (or Spanish- American) culture: the people and their customs and institutions.
NOTE: For Study Abroad programs only.

**Course Outcomes**

- Through a series of cultural proofs (visits, interviews, observations), develop a familiarity with the host culture at the level of the individual.
- Through readings, develop a familiarity with macro forces (historical, political, economical) that have shaped the host culture.

SPAN 423 : Border Spanish. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: Span 326 or Span 329.
DESCRIPTION: Mexican-American speech patterns, including language contact and bilingualism.
NOTE: Previous course in linguistics strongly recommended.

**Course Outcomes**

- Students will demonstrate a knowledge of principal features of (Mexican-American) Popular Spanish in terms of semantics, morphosyntax, and phonetics/phonology.
- Students will understand and be able to describe succinctly S-E bilingual contact phenomena, such as borrowing, code-switching, and language maintenance/shift.
- Students will gain a greater understanding of and appreciation for Mexicans and Mexican-Americans living in the U.S.

SPAN 425 : Contrastive Analysis of the Structures of Spanish and English. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: Span 326 or Span 329.
DESCRIPTION: Contrastive analysis of phonology, morphology, syntax, and semantics of Spanish and English.

**Course Outcomes**

- Students will be able to explain the chief differences and similarities between the structures of the English and Spanish languages.
- Learn the basic principles of Spanish phonology, morphology (both derivational and inflectional), syntax and sociolinguistics.
- Learn what the assumptions of modern linguistics are (e.g., natural language is based on the use of signs; language is a social phenomenon; oral language takes precedence over written language; linguistics is descriptive, not prescriptive; variation is intrinsic to language; language is highly structured; there are linguistic universals; etc.)
- Be able to solve linguistic problems in the teaching and learning of a second language.

SPAN 438 : Hispanic Cinema. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: SPAN 339
DESCRIPTION: Introduction to study of film; background in appreciating best of motion picture art in Spain and Spanish America.
NOTE: Previous experience with film useful but not required.

**Course Outcomes**

- Students will demonstrate a mastery of basic tools of film analysis through the study of a variety of films from the various film industries from Spain and Spanish America.
- Students will write cogent, persuasive essays of literary interpretation.
- Students will demonstate the ability to speak and write in Spanish about film with a reasonable degree of grammatical correctness and fluency.

SPAN 450R : Early Spanish-American Literature. (3:3:0)

WHEN TAUGHT: Contact Department. ; Winter Even Yrs.
PREREQUISITE: SPAN 451
DESCRIPTION: Indigenous literature (Maya, Nahuatl, etc.) and other texts written in Spanish Colonial America through eighteenth century.

**Course Outcomes**

- Apply a variety of analytical and theoretical approaches to the study of early Spanish American writings as literature and as a reflection of the early cultures of the Spanish-speaking countries of the Americas.
- Demonstrate an ability to critically analyze early Spanish American literature through insightful in-class participation, oral presentations, and written assignments.

- Demonstrate a strong knowledge of a broad range of the important literary and historical texts of the early Spanish American period and of the historical and cultural contexts in which they were produced.

SPAN 454R : The Spanish American Novel. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: SPAN 451

DESCRIPTION: Selected Spanish-American novelists such as Juan Rulfo, Gabriel Garcia Marquez, Alejo Carpentier, Mario Vargas-Llosa, etc.

**Course Outcomes**

There are no course outcomes available

SPAN 455R : Spanish-American Poetry. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: SPAN 451

DESCRIPTION: Selected Spanish-American poets, movements, and national traditions.

**Course Outcomes**

- Demonstrate critical acuity in interpreting individual poems, making appropriate reference to formal poetic devices.
- Demonstrate a grasp of the historical, social, and literary contexts of the poems and poets studied.
- Express one's insights in a research paper which makes appropriate use of secondary sources.

SPAN 456R : Spanish American Drama. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: SPAN 451

DESCRIPTION: Twentieth-century theatre from Spanish America and Brazil.

**Course Outcomes**

There are no course outcomes available

SPAN 458R : Hispanic-American Short Story. (3:3:0)

WHEN TAUGHT: Contact Department. Fall Odd Yrs.

PREREQUISITE: SPAN 451

DESCRIPTION: Introduction and development of an important literary genre in Spanish America, including works of Jorge Luis Borges, Julio Cortazar, Juan Rulfo, Gabriel Garcia Marquez, etc.

**Course Outcomes**

- Master basic bibliographical techniques related to the short story genre.
- Demonstrate a firm grasp of the formal aspects of the short story genre.
- Gain a working knowledge of the history and principal figures of the Spanish American short story.

SPAN 459R : Special Topics in Spanish American Literature. (3:3:0)

WHEN TAUGHT: Contact Department. ; Spring Even Yrs.

PREREQUISITE: SPAN 451

DESCRIPTION: Specific topics in Latin American literature. Course content will vary each semester to offer optimum exposure to all areas of Latin American literature.

**Course Outcomes**

- Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Write essays in Spanish, including one final research paper, that demonstrate an advanced knowledge of the use of language and literary criticism.
- Develop the habits and skills for Spanish literary study that inspire continued learning.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to special topics in Spanish-American Literature.

SPAN 461 : Spanish-Speaking American (Mexican-American) Literature. (3:3:0)

WHEN TAUGHT: Fall Contact Department; Winter Even Yrs.; Spring Contact Department; Summer Contact Department

PREREQUISITE: SPAN 451

DESCRIPTION: Spanish-English literature of the Mexican-American within the United States.

**Course Outcomes**

- Demonstrate thorough understanding of the history of Mexican-American literary history.
- Develop advanced skills in research techniques and academic writing.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to Mexican-American Literature.

SPAN 520 : Problems in Spanish Grammar. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs., Contact Department; Spring Contact Department; Summer Even Yrs.

PREREQUISITE: SPAN 326; or SPAN 329

DESCRIPTION: Application of contemporary grammatical concepts to problems in Spanish grammar.

**Course Outcomes**

- The student enrolled in Problems in Spanish Grammar will carefully examine and formulate more accurate and complete rules for several recalcitrant grammar "problems" by reading and studying selections from grammarians and researchers who provide insights into the problem in question. The student's ability to synthesize coherent and meaningful generalizations will be objectively tested by exams and further evaluated while he or she participates in classroom discussion.
- The student enrolled in Problems in Spanish Grammar will acquire a greater understanding of both descriptive and prescriptive grammars and their function and limitations. The student will also acquire specialized terms employed by grammarians and morphosyntacticians. The student's ability to understand and use these terms appropriately will also be objectively measured by examination.
- Complete a research paper/presentation on a particular grammar point or construction. This assignment will test a student's ability to locate appropriate refereed sources, read and synthesize them and prepare a written document and oral presentation according to a recognized style manual.

SPAN 521 : Romance Philology. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: SPAN 326; or SPAN 329
DESCRIPTION: Comparative study of the evolution of Latin into modern Romance languages.

**Course Outcomes**

- Situate Latin and the Romance Languages in their "external" (i.e. political and literary) historical context.
- Recognize the "laws" of regular phonological evolution (e.g. syncope, lenition, diphthongization, etc.).
- Compare the "major" (i.e. literary) Romance languages as far as their phonological development is concerned.
- Summarize the major lexical differences across Romance languages and some of the basic principles of etymology.
- Become familiar with articles published in professional journals relating to the subject matter and produce accurate and meaningful written summaries and reactions to them.
- Learn the rudiments of transcribing medieval or Renaissance manuscripts.

SPAN 522 : History of the Spanish Language. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.; Summer Odd Yrs.
PREREQUISITE: SPAN 326; or SPAN 329
DESCRIPTION: Linguistic sources that contributed to formation of the Spanish language.

**Course Outcomes**

- Acquire a basic knowledge of the changes undergone by the nominal and verbal systems of Latin and Castilian (e.g. the demise of the case system, the development of new verbal tenses, etc.).
- Demonstrate the ability to summarize and discuss in a clear and concise manner several scholarly articles on the topic of the history of the Spanish language.
- Situate Latin and Castilian in their political and literary historical contexts.
- Recognize the laws of regular phonological development (e.g. syncope, lenition, diphthongization, etc.).
- Identify the sources of the Castilian lexicon.
- Understand the different theories that claim to understand the relation between Latin and the Romance languages, especially the relation between Latin and Castilian.
- Understand the process of linguistic standardization in Romance and its implications for the linguistic map of the Iberian Peninsula.

8. Complete the following:

LT AM 495 : Senior Seminar in Latin American Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Instructor's consent for minors.
DESCRIPTION: Sources, materials, and methods of research and writing; critical analysis of a research project.
NOTE: Required for all Latin American Studies majors their senior year.

**Course Outcomes**

- This a capstone course taylored to individual research and study topics.

9. Complete 3 hours of an internship course, a service learning course, or Study Abroad program course.
   a. Internship students (field study or service learning) will register for IAS 399R.
   b. Study Abroad programs shall be in a Latin American venue, either Portuguese speaking or Spanish speaking; students must enroll in a 3.0 credit hour international or cross-cultural course during their program (e.g. IAS 380R).

**Note:** The hours used for this requirement cannot double count for requirement 7 and 9.

*Hours include courses that may fulfill university core requirements.

## Program Requirements

1. Complete the following prerequisite courses or equivalents:

**Either**

PORT 101 : First-Year Portuguese. (4:5:1)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Pronunciation, conversation, reading, and fundamentals of grammar. Specific attention to Portuguese as the language of Brazil.
NOTE: Native speakers of Portuguese must enroll in Port 321.

**Course Outcomes**
- Participate in classroom activities in Portuguese.
- Communicate verbally in routine situations such as greeting people and becoming acquainted.
- Understand simple conversations about some familiar, concrete topics such as daily activities, likes and dislikes, family, and home.
- Create simple sentences using basic grammar rules and vocabulary with limited accuracy.
- Read short “cultural blurbs” from the textbook, as well as other short texts such as personal ads, menus, and advertisements.
- Write word- and sentence-length messages such as lists, biographical information on forms, and descriptions of people and things.
- Know basic facts about some Portuguese-speaking countries.
- Identify basic cultural products, practices, and perspectives from Portuguese-speaking countries.

PORT 102 : First-Year Portuguese. (4:5:1)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Port 101.
DESCRIPTION: Pronunciation, conversation, reading, and fundamentals of grammar. Specific attention to Portuguese as the language of Brazil.
NOTE: Native speakers of Portuguese must enroll in Port 321.

**Course Outcomes**
- Participate in classroom activities in Portuguese.
- Participate in conversations about some familiar, concrete topics such as daily activities, family, home, work, and school.
- Understand simple conversations about some familiar, concrete topics such as daily activities, likes and dislikes, family, and home.
- Create simple sentences using basic grammar rules and vocabulary with limited accuracy.
- Read short “cultural blurbs” from the textbook, as well as other short texts such as advertisements, letters, recipes, and stories.
- Know basic facts about some Portuguese-speaking countries.
- Identify basic cultural products, practices, and perspectives from Portuguese-speaking countries.

PORT 201 : Third-Semester Portuguese. (4:5:0)

PREREQUISITE: Port 102 or three units of high school Portuguese.
DESCRIPTION: Second-year grammar, reading, writing, and conversation.
NOTE: Native speakers of Portuguese must take Port 321.

**Course Outcomes**
- Maintain a simple face-to-face conversation about concrete topics such as self, family, friends, and daily activities.
- Handle a simple transactional situation (making purchases, interviewing for a job, etc.)
- Discuss some topics of general interest (school, geography, finances, business, etc.)
- Use grammar principles, including the present, past, and future indicative and subjunctive, with increasing accuracy.
- Understand conversations, announcements, and media reports on familiar topics.
- Read short journalistic and literary texts.
- Write short, simple compositions in a variety of genres (stories, résumés, skits, etc.)
- Know basic facts about some Portuguese-speaking countries.
- Identify basic cultural products, practices, and perspectives from Portuguese-speaking countries.

PORT 202 : Fourth-Semester Portuguese: Reading and Comprehension. (4:5:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Port 201.

DESCRIPTION: Fourth-semester class introducing grammar and culture through study of literature.

NOTE: Not for returned missionaries. Culmination of GE Mathematics/Foreign Language requirement. Native speakers of Portuguese must take Port 321. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Maintain a simple face-to-face conversation about an increasing range of topics of general interest (politics, transportation, the media, the arts, sports, etc.)
- Handle some situations with a complication (resolving disagreements, traffic violations, etc.)
- Use previously-learned grammar principles with increasing accuracy.
- Understand oral conversations, announcements, and media reports about familiar topics.
- Read medium-length journalistic and literary texts on familiar topics, including a short story and a play.
- Write simple compositions in a variety of genres (letters, pamphlets, articles, short stories, etc.).
- Discuss some differences between the cultural norms and perspectives of Americans and Portuguese speakers.
- Discuss some common themes from Portuguese-speaking cultures.

**Or**

SPAN 101 : Foundational Spanish 1. (4:5:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Fundamentals of Spanish, emphasizing communication. (Accelerated sections available.) Pass/fail only.

NOTE: For students with no previous Spanish.

**Course Outcomes**

- Respond in Spanish to simple ques-tions on the most commonfeatures of daily life
- Convey minimal meaning tointerlocutors experiencedwith dealing with foreign-ers by using isolated words,lists of words, memorizedphrases and some personal-ized recombinations ofwords and phrases
- Satisfy a very limited num-ber of immediate needs through the use of spoken Spanish.
- Respond in written Spanish at the same level as indicated in outcomes related to speaking.
- Understand common basic cultural practices and products related to greetings and family life in some Spanish-speaking countries.

SPAN 102 : Foundational Spanish 2. (4:5:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Span 101.

DESCRIPTION: Continuation of Span 101. Fundamentals of Spanish, emphasizing communication. (Accelerated sections available.) Pass/fail only.

**Course Outcomes**

- Using Spanish, participate in simple, directconversations on generallypredictable topics related todaily activities and personalenvironment.
- Create with the languageand communicate personalmeaning to sympatheticinterlocutors by combininglanguage elements in dis-crete sentences and stringsof sentences.
- Obtain and give informationby asking and answeringquestions.
- Sustain and bring to a closea number of basic, uncom-plicated communicativeexchanges, mostly in a reac-tive mode.
- Satisfy simple personalneeds and social demandsto survive in the target lan-guage culture.
- Respond in written Spanish at the same level as indicated in preceding objectives related to spoken Spanish.
- Understand common basic cultural practices and products related to travel in some Spanish-speaking countries.

SPAN 105 : University Spanish 1. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Two years of high school Spanish or Span 101/102 or placement by diagnostic test.

DESCRIPTION: Continued development of grammar, cultural understanding, reading, writing, and conversation skills as introduced in foundational courses. Students are expected to attain an *Intermediate-Mid* proficiency level.

**Course Outcomes**

- Use Spanish to maintain simple verbal conversations on everyday topics.
- Communicate using paragraph level discourse in writing.
- Be understood by sympathetic native speakers despite occasional misunderstandings.
- Describe and narrate in the past present and future a portion of the time.
- Understand that hispanic culture is vast and diverse.
- Demonstrate understanding of and appreciation for Hispanic cultures.

SPAN 106 : University Spanish 2. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Span 105.

DESCRIPTION: Expanded development of grammar, cultural understanding, reading, writing, and conversation skills as introduced in foundational and intermediate courses. Students are expected to attain an *Intermediate-Mid* to *Intermediate-High* proficiency level.

**Course Outcomes**

- Use Spanish to maintain simple verbal conversations on everyday topics.
- Communicate using paragraph level discourse in writing.
- Be understood by sympathetic native speakers despite occasional misunderstandings.
- Describe and narrate in the past present and future a portion of the time.
- Understand that hispanic culture is vast and diverse.
- Demonstrate understanding of and appreciation for Hispanic cultures.

SPAN 205 : University Spanish 3. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Four years of high school Spanish, Span 106, or placement by test.

DESCRIPTION: Continued development of grammar, cultural understanding, conversation skills, writing, and reading through the study of literature. Students are expected to attain an *Intermediate-High* proficiency level.

NOTE: Fulfills the University Core Languages of Learning requirement. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Consolidate the student's understanding of the basic structures of the Spanish language and demonstrate intermediate proficiency in Spanish as defined by the American Council on the Teaching of Foreign Languages (ACTFL) proficiency guidelines for reading, writing, speaking, and listening.
- Provide students with a moderate knowledge of the Spanish language and cultures, thus broadening their perception of humanity and its varied manifestations.
- Interpret and analyze a selection of literary works in Spanish within their historical and cultural context.

SPAN 206 : University Spanish 4. (4:5:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Spanish 205 or placement by test.

DESCRIPTION: Expanded development of grammar, cultural understanding, conversation skills, writing, and reading through the study of literature. Students are expected to attain a strong *Intermediate-High* or *Advanced-Low* proficiency level.

**Course Outcomes**

- Consolidate the student's command of the basic structures of the Spanish language.
- Develop literacy and oral language skills at the intermediate-advanced range.
- Obtain an adequate knowledge of the Spanish language and cultures through the study of selected perceptions and manifestations.
- Understanding the natural speech of native speakers from any Spanish-speaking country and interpret the general idea in their proper cultural background.

2. Complete one of the following courses:

PORT 321 : Third-Year Portuguese Reading, Grammar, and Culture. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Placement by test.

NOTE: First class for returned Portuguese-speaking missionaries. Fulfills GE Foreign Language requirement.

**Course Outcomes**

There are no course outcomes available

SPAN 321 : Third-Year Spanish Reading, Grammar, and Culture. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Placement by test.

DESCRIPTION: Intensive study and practice with Spanish grammar, vocabulary, and writings incorporating cultural and literary readings.

NOTE: First class for returned Spanish-speaking missionaries. Fullfills the University Core Languages of Learning requirement. Required for Spanish major and minor.

**Course Outcomes**

There are no course outcomes available

3. Complete one of the following courses:

IHUM 260 : Humanities of Latin America. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Achievements of Latin American culture regarding art, philosophy, literature, and music from the pre-Columbian era to the present.

**Course Outcomes**

There are no course outcomes available

PORT 355 : Brazilian Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Port 321.
DESCRIPTION: Culture, history, art, music, and traditions of Brazil.

**Course Outcomes**

There are no course outcomes available

SPAN 355 : Spanish American Culture and Civilization. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer Contact Department
PREREQUISITE: Span 321 or concurrent enrollment.
DESCRIPTION: Culture, history, art, music, and traditions of Spanish America.

**Course Outcomes**

There are no course outcomes available

4. Complete four courses from the following:

ANTHR 326 : Guatemalan Society and Culture. (3:3:0)

WHEN TAUGHT: Winter
DESCRIPTION: History, culture, society, and life (economic, familial, religious) among peoples of Guatemala. Guatemala as exemplar of colonial, cultural, and global processes evident throughout Latin America.

**Course Outcomes**

- Using Guatemala as a case, which exemplifies the political, economic, and religious histories of Latin America, students will learn the basic relationships between cultural principles, social structure, environmental constraint, and important symbols in Latin America, and how these were constructed through historical processes of violent and peaceful social interaction.

ANTHR 355 : Mesoamerican Archaeology. (3:2:ARR)

WHEN TAUGHT: Fall
DESCRIPTION: Cultural and environmental bases of ancient civilizations in Mexico and Central America. Olmec, Maya, Toltec, and Aztec cultures.

**Course Outcomes**

- Students will gain knowledge of the major archaeological sites excavated and studied in Meso-America with an emphasis on critiquing archaeological methodologies and theory as they have been applied to specific archaeological sites in the field. Through this study, students will also gain a knowledge of the history and cultural development of the major societies and cultures of this region and the role that archaeology plays in assisting in providing data related to questions associated with the development and decline of these entities.

GEOG 255 : Middle and South America. (3:3:0)

WHEN TAUGHT: Winter Contact Department
DESCRIPTION: Environmental, cultural, economic, and political parameters of Latin American societies.

**Course Outcomes**

- To link how the “5 Themes of Geography” [Location, Place, Human Environment Interaction, Region, and Movement] relate to the overall study of the Latin American realm.
- To gain a working knowledge of the connection of the underlying physical "stage" of Latin America to the distributions of people and their activities.
- To gain an understanding of the geographic structure of Latin America’s cultural components including languages, ethnic groups, settlement patterns, and religious beliefs.
- To develop geographic writing and research skills that result in papers that are fluent, relevant, and creative.
- To use other students’ input to effectively enhance Latin American geographic understanding through group work and discussions
- To discover the significance of Latin America’s increasing impact on the world’s economy, as well as the growing Hispanization of the United States and the Church of Jesus Christ of Latter-day Saints

HIST 251 : Conquest and Colonization of Latin America. (3:3:0)

WHEN TAUGHT: Fall
DESCRIPTION: Pre-Columbian civilizations, Iberian exploration and conquest of the New World, and colonial development of Hispanic and Portuguese America from 1492 to 1823.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, religious, and cultural characteristics of Spanish and Portuguese colonialism in the Americas between 1492 and 1825.
- Students will be able to analyze and interpret primary source documents.

Students will gain experience in historical research and improve writing skills.
- Students will analyze historical questions and place them in historiographical context.

HIST 252 : Modern Latin America. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: National period (1810 to present): independence, institutional development, culture, and inter-American relations.

**Course Outcomes**

- Students will be exposed to the major economic, political, and cultural shifts that shaped the "modern" Latin American state in the nineteenth and twentieth century, as well as its variants, notably the cult of caudillo rule and its twentieth century offshoots
- Students will become conversant with major theoretical arguments and approaches to Latin American history in the contemporary era.
- Students will gain oral proficiency in discussing historiographical and thematic issues in modern Latin America during weekly discussion.
- Students will either broaden their understanding of literature on one topic in Latin American history by way of an intensive literature survey or deepen their knowledge on a particular topic in Latin American history by way of an original research paper.
- Students will make connections between cultural and polotico-economic issues by way of a wide variety of course readings that expose students to literature, as well as traditional historical themes.

HIST 355 : History of Argentina. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

DESCRIPTION: Rise of modern Argentina from colonial times, focusing on the dynamic political, economic, social, and cultural developments since independence.

**Course Outcomes**

- Learn and understand more about the historical processes that have shaped the nation of Argentina from colonial times up to the present.
- To be able to discuss and explain those processes through the written and spoken word with clarity, persuasiveness, and proper use of evidence
- To write a well written, organized, and developed term paper using the critical thinking and writing skills of a historian
- To be able to read primary sources and discuss their utility in constructing historical arguments.

HIST 356 : Brazil. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: From 1500 to present, emphasizing relationship between colonial patterns and twentieth-century reality and dilatory transformation of Brazil's political and economic culture.

**Course Outcomes**

- Students will become academically conversant in the major social, economic, and cultural developments of Brazil's history since 1500.
- Students will be able to analyze and evaluate the content and meaning of primary sources, and through critical interpretation, draw reasonable conclusions.
- Students will be able to formulate original historical questions and answer them by careful and systematic research in primary and secondary sources.
- Students will be able to write history that is coherent and persuasive by following discipline's norms for writing and careful documentation.

HIST 357 : The Indian in Latin American History. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: History of Latin American Indians from preconquest days to the present; achievements, contributions, and problems.

**Course Outcomes**

- Students will be able to explain and analyze the political, economic, social, religious, and cultural structures of the Mayas, Aztecs, and Incas, how they were transformed by the Spanish conquest, and how they developed in reaction to European colonialism.
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills.
- Students will analyze historical questions and place them in historiographical context.

HIST 358 : Gender and History in Latin America. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: How gender roles have been defined legally, socially, and culturally in Latin America from the colonial period to the present, emphasizing the nineteenth and twentieth centuries.

**Course Outcomes**

- To understand how gender relations and gender roles developed in Latin America from colonial times to the present.
- To be able to discuss and explain those developments through the written and spoken word with clarity, persuasiveness, and proper use of evidence.
- To write a well written, organized, and developed term paper using the critical thinking and writing skills

of a historian.
- To be able to read primary sources and discuss their utility in constructing historical arguments.

HIST 359 : Inter-American Relations. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Decline of Europe's American empires, legacies bequeathed to the new republics by their European heritage, and how those legacies have affected relations among the various American republics.

**Course Outcomes**

- Students will gain an understanding of the major historiographical schools of thought in Inter-American relations
- Students will gain an in-depth understanding of at least one major figure in Inter-American relations each term the class is taught by way of reading primary sources and writing about the legacy of that individual.
- Students will be exposed to a variety of thematic approaches to Inter-American relations, including gender, health and the environment, culture, tourism, film, and literature. It is expected that these alternatives to traditional diplomatic relations will inform their selection of a research topic for the course.
- Students will write a research paper focusing on one of the thematic approaches presented in class and informed by primary sources, as well as secondary literature, in order to arrive at a stronger understanding of Inter-American relations.
- Students will obtain a stronger cross-cultural understanding of Inter-American relations by debating and discussing issues, informed by our class readings, during our weekly discussions. At times students will be asked to embrace perspectives that they may not entirely agree with or understand.
- Students will become conversant with the watershed events of the Haitian Revolution, the Latin American Revolutions, the Spanish American War, the Cuban Revolution, and the Washington Consensus,and why they have been critical to the tenor of Inter-American Relations.

HIST 363 : The Spanish Frontier in North America. (3:3:0)

DESCRIPTION: Spanish exploration, occupation, and institutions of northern Mexico, the American southwest, and Florida, 1521-1821; Mexican period to 1848.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, and religious developments in the history of the Spanish and Mexican northern frontier in North America between approximately 1492 and 2011
- Students will be able to analyze and interpret primary source documents
- Students will be able to interpret and debate the meanings and historical value of primary source texts with their peers.

HIST 385 : Latinos in the United States. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

DESCRIPTION: The place of Latin Americans within the context of U.S. history. The growth and development of the largest Latino communities from pre-colonial times to present day and how Latinos may influence future policies within the U.S.

**Course Outcomes**

- Students will learn the history of Latinos in this country beginning with the circumstances which brought them to this country, the ways they have integrated or resisted integration, and the efforts they have made to claim their rights as citizens.
- Students will learn to interpret the documents and rhetoric of this community which will help them understand the intellectual, cultural and political thought of Latinos over the last 100 years.
- Students will learn the current state of Latino social and cultural integration in the Utah community.
- Students will learn to write a major essay on the history of Latinos in order to understand the literature as well as the primary sources available on this community.

HIST 424 : Romance Language Handwriting and Documents. (3:3:0)

DESCRIPTION: Interpretation of handwriting in vernacular scripts in the Romance languages of Europe (especially Spanish, French, and Italian), sixteenth through eighteenth centuries, in family history sources.

**Course Outcomes**

- Students will be able to read with fluency documents in italic style handwriting;
- Students will be able to recognize and use documents and understand the legal, ecclesiastical and civil systems behind them;
- Students will be able to understand basic concepts of paleography and the impacts of language on the historical development of handwriting
- Students will be able to develop familiarity with secretary (cortesana or procesal) handwriting

IHUM 260 : Humanities of Latin America. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Achievements of Latin American culture regarding art, philosophy, literature, and music from the pre-Columbian era to the present.

**Course Outcomes**

There are no course outcomes available

IAS 399R : Academic Internship: International. (.5-9:ARR:ARR)

PREREQUISITE: Acceptance into program.
DESCRIPTION: Individualized work or volunteer experience in an international setting.
NOTE: Class must be coordinated through International Study Programs.

**Course Outcomes**

- · Apply skills and material learned in traditional courses to a real-world workplace environment.· Demonstrate proficiency in the skills required by the internship supervisor.· Demonstrate an ability to link insights gained from traditional classes and from real-world workplace experiences.

LT AM 211 : Introduction to Latin American Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: History, politics, sociology, geography, and culture of Latin America.

**Course Outcomes**

There are no course outcomes available

LT AM 495 : Senior Seminar in Latin American Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Instructor's consent for minors.
DESCRIPTION: Sources, materials, and methods of research and writing; critical analysis of a research project.
NOTE: Required for all Latin American Studies majors their senior year.

**Course Outcomes**

- This a capstone course taylored to individual research and study topics.

POLI 358 : Latin American Politics. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: Poli 200 or Lt Am 211.
DESCRIPTION: Conceptual and contemporary issues in Latin America's search for political order and economic development.

**Course Outcomes**

There are no course outcomes available

POLI 380 : International Relations of Latin America. (3:3:0)

PREREQUISITE: Poli 200 or Lt Am 211.
DESCRIPTION: Factors that affect foreign relations of Latin American countries, including the U.S. role, emphasizing intervention, democracy, development, and trade.

**Course Outcomes**

There are no course outcomes available

PORT 339 : Introduction to Portuguese and Brazilian Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Port 321.
DESCRIPTION: Readings in modern literature; formal literary analysis.

**Course Outcomes**

- Contextualize and analyze literature written in Portuguese from various genres and periods.
- Acquire and apply the fundamental tools for literary analysis, appreciation, and interpretation through a study of a balanced selection of foundational works from Portugal and Brazil and some areas of Lusophone Africa.
- Demonstrate through written exercises mastery of the basic terms of literary analysis and the formal patterns of fiction (narration, plot, characterization, structure, etc.) drama (tragedy, comedy, dialogue, structure, staging, etc.), and poetry (meter, rhyme, syllabification, figurative language, including tropes and figures).
- Produce several interpretive essays that demonstrate mastery of the formal components of fiction, drama, and poetry, and that reveal competence in library research skills, appropriate use of secondary sources, and proper adherence to MLA bibliographic style.

PORT 451 : Survey of Brazilian Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter Contact Department
PREREQUISITE: PORT 339
DESCRIPTION: Literary periods, genres, and great writers of Brazil.

**Course Outcomes**

- Define and recognize the periods, areas of specialization, significant authors, schools or movements of Brazilian literature.
- Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to Brazilian literature.

Write essays in Portuguese, including a final research paper, that demonstrate an advanced knowledge of the use of language and literary criticism.

SOC 345 : World Populations. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Fertility, mortality, and migration patterns of world populations as they relate to current social, economic, political, and religious issues.

**Course Outcomes**

There are no course outcomes available

SPAN 339 : Introduction to Spanish Literature. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Span 321 or concurrent enrollment.

DESCRIPTION: Readings in modern Hispanic literatures, focusing on formal literary analysis.

NOTE: Course is prerequisite to 400-level literature courses.

**Course Outcomes**

- Demonstrate a working knowledge of the most salient elements of the most important literary genres, including, for example, short story, novel, poetry, theater, essay, and film.
- Students will demonstrate a mastery of basic tools of literary analysis, including versification and basic elements of narratology, and interpretation through the study of a variety of works from authors from Spain and Spanish America.
- Students will write cogent, persuasive essays of literary interpretation.
- Students will demonstrate the ability to speak and write in Spanish about literature with a reasonable degree of grammatical correctness and fluency.

SPAN 365 : Mexican-American Culture. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Span 321 or concurrent enrollment.

DESCRIPTION: Contemporary culture (education, popular and fine arts, worldview, attitudes, etc.) of the Mexican-American in the U.S.

**Course Outcomes**

- Recognize and describe important cultural products, such as art, literature, architecture, and music, including important works and individuals, as pertaining to Mexican American culture.
- Describe important cultural institutions, including family and religion.
- Discuss important cultural practices, including customs, traditions, celebrations, festivals, etc
- Analyze recent cultural and social developments, including political, social, religious, and artistic events, placing them in historical context.
- Students should be able to recognize, compare, and evaluate the influence of their own cultural background on their attitudes, beliefs, and worldview, in relation to the Mexican- American world.

SPAN 395R : Contemporary Culture. (.5-3:ARR:ARR)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Contemporary Spanish (or Spanish- American) culture: the people and their customs and institutions.

NOTE: For Study Abroad programs only.

**Course Outcomes**

- Through a series of cultural proofs (visits, interviews, observations), develop a familiarity with the host culture at the level of the individual.
- Through readings, develop a familiarity with macro forces (historical, political, economical) that have shaped the host culture.

SPAN 423 : Border Spanish. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Span 326 or Span 329.

DESCRIPTION: Mexican-American speech patterns, including language contact and bilingualism.

NOTE: Previous course in linguistics strongly recommended.

**Course Outcomes**

- Students will demonstrate a knowledge of principal features of (Mexican-American) Popular Spanish in terms of semantics, morphosyntax, and phonetics/phonology.
- Students will understand and be able to describe succinctly S-E bilingual contact phenomena, such as borrowing, code-switching, and language maintenance/shift.
- Students will gain a greater understanding of and appreciation for Mexicans and Mexican-Americans living in the U.S.

SPAN 438 : Hispanic Cinema. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: SPAN 339

DESCRIPTION: Introduction to study of film; background in appreciating best of motion picture art in Spain and

Spanish America.
NOTE: Previous experience with film useful but not required.

**Course Outcomes**

- Students will demonstrate a mastery of basic tools of film analysis through the study of a variety of films from the various film industries from Spain and Spanish America.
- Students will write cogent, persuasive essays of literary interpretation.
- Students will demonstate the ability to speak and write in Spanish about film with a reasonable degree of grammatical correctness and fluency.

SPAN 450R : Early Spanish-American Literature. (3:3:0)
WHEN TAUGHT: Contact Department. ; Winter Even Yrs.
PREREQUISITE: SPAN 451
DESCRIPTION: Indigenous literature (Maya, Nahuatl, etc.) and other texts written in Spanish Colonial America through eighteenth century.

**Course Outcomes**

- Apply a variety of analytical and theoretical approaches to the study of early Spanish American writings as literature and as a reflection of the early cultures of the Spanish-speaking countries of the Americas.
- Demonstrate an ability to critically analyze early Spanish American literature through insightful in-class participation, oral presentations, and written assignments.
- Demonstrate a strong knowledge of a broad range of the important literary and historical texts of the early Spanish American period and of the historical and cultural contexts in which they were produced.

SPAN 451 : Survey of Hispanic-American Literature. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer, Contact Department
PREREQUISITE: SPAN 339
DESCRIPTION: Literary masterpieces of Spanish America.

**Course Outcomes**

- Understand and properly apply the tools of literary analysis, literary theory as well as other critical and philosophical concepts which may apply to Spanish American literature.
- Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Define and recognize the periods, significant authors, schools or movements of Spanish American literature.
- Recognize and value the contributions, past and present, of Spanish American literature to the cultures of its respective countries.
- Develop the habits and skills of lifelong readers of Spanish American literature.
- Demonstrate and apply a strong understanding of the basic structures of the Spanish language as they apply to literature.
- Write analytical and descriptive essays in Spanish that demonstrate an advanced knowledge of the works studied, a proper command of the Spanish language, mastery of the tools of literary criticism, and familiarity with research methodologies.

SPAN 454R : The Spanish American Novel. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: SPAN 451
DESCRIPTION: Selected Spanish-American novelists such as Juan Rulfo, Gabriel Garcia Marquez, Alejo Carpentier, Mario Vargas-Llosa, etc.

**Course Outcomes**

There are no course outcomes available

SPAN 455R : Spanish-American Poetry. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: SPAN 451
DESCRIPTION: Selected Spanish-American poets, movements, and national traditions.

**Course Outcomes**

- Demonstrate critical acuity in interpreting individual poems, making appropriate reference to formal poetic devices.
- Demonstrate a grasp of the historical, social, and literary contexts of the poems and poets studied.
- Express one's insights in a research paper which makes appropriate use of secondary sources.

SPAN 456R : Spanish American Drama. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: SPAN 451
DESCRIPTION: Twentieth-century theatre from Spanish America and Brazil.

**Course Outcomes**

There are no course outcomes available

SPAN 459R : Special Topics in Spanish American Literature. (3:3:0)
WHEN TAUGHT: Contact Department. ; Spring Even Yrs.

TAUGHT:
PREREQUISITE: SPAN 451
DESCRIPTION: Specific topics in Latin American literature. Course content will vary each semester to offer optimum exposure to all areas of Latin American literature.

**Course Outcomes**

- Recognize aesthetic constructs, genre differences and similarities, ideological trends, and historical contexts.
- Write essays in Spanish, including one final research paper, that demonstrate an advanced knowledge of the use of language and literary criticism.
- Develop the habits and skills for Spanish literary study that inspire continued learning.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to special topics in Spanish-American Literature.

SPAN 461 : Spanish-Speaking American (Mexican-American) Literature. (3:3:0)
WHEN TAUGHT: Fall Contact Department; Winter Even Yrs.; Spring Contact Department; Summer Contact Department
PREREQUISITE: SPAN 451
DESCRIPTION: Spanish-English literature of the Mexican-American within the United States.

**Course Outcomes**

- Demonstrate thorough understanding of the history of Mexican-American literary history.
- Develop advanced skills in research techniques and academic writing.
- Understand and properly apply the tools of literary analysis, as well as critical and philosophical concepts which may apply to Mexican-American Literature.

5. With prior approval from the program coordinator, students may receive up to 3 elective hours for service learning, an internship, or Study Abroad.

*Hours include courses that may fulfill university core requirements.

# BA in Ancient Near Eastern Studies (61–65 hours*)

Show All Course Descriptions
Hide All Course Descriptions

## The Discipline

Ancient Near Eastern Studies deals with the history, literature, religions, and cultures of the ancient Near East from 3000 B.C. to A.D. 640. It involves study in the humanities, social sciences, and ancient scripture. Geographically the ancient Near East consists of the region currently designated the Middle East. The Ancient Near Eastern Studies major is structured to provide students with a broad understanding of the civilizations of the ancient Near East and to emphasize the study of the Hebrew Bible and related literature or the Greek New Testament and related literature in their broader ancient Near Eastern context.

## Career Opportunities

The Ancient Near Eastern Studies major prepares students to pursue graduate work and an academic career in all areas of biblical and ancient Near Eastern studies. Ancient Near Eastern Studies, with its emphasis on critical reading, thinking, and writing skills, also provides quality training for students entering professional or library science programs. Additionally, an Ancient Near Eastern Studies degree offers relevant preparation for students seeking to teach seminary and institute in the Church Educational System.

## Program Requirements | View MAP

1. Complete the following core courses:

ANES 201 : Introduction to Ancient Near Eastern Studies. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Historical background, research skills, and methods of academic inquiry relevant to ancient Near Eastern Studies.

**Course Outcomes**
- Introduce students to the field of Ancient Near Eastern Studies, including the historical and geographical breadth from 3000 b.c.e down to 600 c.e., the development of the field of study, the major texts and their standard editions, research skills, major terms, and employment possibilities.
- Introduce students to the issues in the study of the Ancient Near East that have an impact on understanding the Hebrew Bible and the New Testament, including a discussion on the challenges “believing” students face, LDS in particular. This will include a discussion of some of the ethical issues in current scholarship.
- Help students critically read, discuss, research and write about ancient texts with methodological rigor and academic integrity.

ANES 310 : History and Culture of Ancient Israel. (3:3:0)
WHEN TAUGHT: Fall Odd Yrs.
PREREQUISITE: HIST 238; or HIST 239
DESCRIPTION: Israelite history and culture in Canaan/Israel from c. 2000 B.C. to A.D. 200. Methodology for using the Bible in historical research.

**Course Outcomes**
- Students will know and be able to interpret the significant events and developments in the history of ancient Israel within the large context of the ANE, and know and be able to interpret the main features of the culture of ancient Israel, based on textual and artifactual data.
- be able to analyze and discuss the value and limitations of the Bible as a reliable source of historical information, and be able to relate and analyze major opinions on this issue in the field of biblical studies.
- be able to research, analyze, and write clearly and persuasively about the issues just listed.
- have considered how their own faith-views impact their approach to certain of the issues just listed.

ANES 495 : Senior Seminar in Ancient Near Eastern Studies. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Capstone seminar utilizing research, analytical, and writing skills to produce a senior research paper on an ancient Near Eastern topic.

**Course Outcomes**
- Students will be ableto do rigorous research in the area of their academic specialty that will result in a

**Middle and Near Eastern Studies**

**Majors**

20-25 page publishable senior paper, which, in turn, should prepare the student for further graduate work.
- Students will learn how to better present their own research and do quality peer review of other's work.
- Students will learn how to navigate and understand the publishing process, includinghow to solicit publication of work and how to find scholarly symposia and other suitable venues to present their research.

HIST 238 : Ancient Near East to 330 BC. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Ancient cultures of the Near East (Egypt, Mesopotamia, Syro-Palestine, Anatolia, Iran) from the beginnings of civilization to the conquests of Alexander the Great.

**Course Outcomes**

- Students will gain a historical consciousness of the Ancient Near East by demonstrating a critical literacy of major developments in Ancient Near East history, key historical terms, primary sources, and narratives of Ancient Near East history up to Alexander.
- Students will develop an ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions about ancient Near East primary sources.
- Students will develop use of the historical method of research effectively by skillfully and honestly using primary and secondary sources in the formation of answers to major questions surrounding the narratives of the ancient Near East
- Students will develop their writing ability through a range of pre-writing and writing assignments.

HIST 239 : Ancient Near East, 330 BC - 640 AD. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Cultures and empires of the Near East (Persia, Hellenistic kingdoms, Judaism, early Christianity, Rome, and Byzantium) from Alexander the Great to the Arab conquests.

**Course Outcomes**

- Gain a firsthand understanding of the Hellenistic and Christian Near East through studying and analyzing primary sources, using a template of (suggested) questions
- Understand basic issues of faith and reason, as they relate to Christianity and Judaism in the formative period of the former
- Master an early Christian primary source well enough to present, as a group, its gist, meaning, and significance
- Understand how the political and social changes in the Eastern Mediterranean in the Hellenistic period contributed to the development of science, technology, philosophy, and religion
- Understand the basic historical issues surrounding the origin of Christianity
- Understand the development of the Christian Roman Empire (Byzantium)

REL A 211 : The New Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Historical background, narrative, and doctrines of the New Testament. Covers the life and teachings of Jesus Christ set forth in the four Gospels.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

REL A 212 : The New Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Historical background, narrative, and doctrines of the New Testament. Covers the Acts of the Apostles through the Revelation of John.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

REL A 301 : The Old Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Historical background, narrative, and doctrines of the Old Testament. Covers Genesis through 2 Samuel.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

REL A 302 : The Old Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Historical background, narrative, and doctrines of the Old Testament. Covers 1 Kings through Malachi.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

**And** complete one of the following:

ANTHR 351 : Archaeology and the Bible. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.; Winter Odd Yrs.

DESCRIPTION: Setting and context of the Bible as clarified and supplemented from archaeology, history, and related studies. Archaeological methods.

**Course Outcomes**

- Students will gain knowledge of the development of Biblical archaeology as a field within the overall umbrella of the discipline of anthropology. This study will include extensive study of the both the defining personalities and methodologies in this sub-area of archaeology, as well as the major excavated sites in the Levant associated with Biblical events. Students will also gain a knowledge of the historical development of the Near East through its archaeological contexts, and the debates existing between differing methodologies associated with the use of the Bible as a primary document.

ANTHR 375 : Archaeology of Egypt. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: ANTHR 101; or ANTHR 110; or ANTHR 215

DESCRIPTION: Survey of the most important archaeological sites, artifacts, and monuments of Egypt, their cultural contexts, as well as major methodological developments in Egyptian archaeology and Egyptology.

**Course Outcomes**

- Survey of the most important archaeological sites, artifacts, and monuments of Egypt, their cultural contexts, as well as major methodological developments in Egyptian archaeology and Egyptology
- Pre-Islamic roots through Ottoman period. Sites, artifacts, and monuments of Islam. Focus on religious and cultural contexts. Relevant Islamic texts and archaeological methods for understanding medieval Islamic sites and artifacts

ANTHR 378 : Near Eastern Archaeology. (3:2:ARR)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Peoples and culture history in Mesopotamia, Syria, Palestine, Egypt, 3500--500 B.C. Substantial reading, writing, discussion.

**Course Outcomes**

- Students will gain an introductory level understanding of the archaeology, history, and ancient

cultural contexts of the major ancient civilizations of Mesopotamia, Syria, Palestine, and Egypt through readings, research assignments, and discussion.
- Students will increase their skill sets with regard to critical thinking, research, analysis of data, and writing through multiple types of course assignments including a final research paper project.

2. Complete one of the following language/literature options:
    - Hebrew Bible and related literature:
        1. Complete one course from the following:

HEB 131 : First-Year Biblical Hebrew. (4:5:0)

WHEN TAUGHT: Fall; Summer

DESCRIPTION: Old Testament Hebrew. Provides foundation in grammar and vocabulary; reading Hebrew prose texts in Bible.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Recite the Hebrew alphabet and recognize the vowels;2. Analyze and discuss most of the fundamental elements of Hebrew grammar;3. Read and translate elemental biblical historical narrative texts with limited use of a lexicon;4. Analyze and parse the verbal system: Pa'al (Qal);5. Define approximately 315 vocabulary words.

HEB 133 : Honors Hebrew and the Old Testament. (4:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: Must be taken in conjunction with specified Honors section of Rel A 301.

DESCRIPTION: Rapid survey of biblical Hebrew.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Recite the Hebrew alphabet and recognize the vowels;2. Analyze and discuss most of the fundamental elements of Hebrew grammar;3. Read and translate elemental biblical historical narrative texts with limited use of a lexicon;4. Analyze and parse the verbal system: Pa'al (Qal);5. Define approximately 315 vocabulary words.

        2. Complete one course from the following:

HEB 132 : First-Year Biblical Hebrew. (4:5:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: HEB 131

DESCRIPTION: Old Testament Hebrew. Provides foundation in grammar and vocabulary; reading Hebrew prose texts in Bible.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Analyze and discuss the fundamental elements of Hebrew grammar.2. Read and translate elemental biblical historical narrative texts with limited use of a lexicon.3. Analyze and parse the verbal system: pa'al, niphal, piel, pual, hiphil, hophal, hithpael.4. Define approximately 400 vocabulary words.

HEB 134 : Honors Hebrew and the Old Testament. (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: Must be taken in conjunction with specified Honors section of Rel A 302.

DESCRIPTION: Rapid survey of biblical Hebrew.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Analyze and discuss the fundamental elements of Hebrew grammar.2. Read and translate elemental biblical historical narrative texts with limited use of a lexicon.3. Analyze and parse the verbal system: pa'al, niphal, piel, pual, hiphil, hophal, hithpael.4. Define approximately 400 vocabulary words.

        3. Complete the following:

ANES 331 : Readings in Ancient Near Eastern Texts to 330 B.C. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: HIST 238

DESCRIPTION: Reading and analysis of major ancient Near Eastern texts in English translation. Methodology for dealing with potential biblical parallels.

**Course Outcomes**

- Students will be able to competently read, analyze, and communicate about ANE texts.
- Extrapolate cultural and historical information from primary texts, while accurately placing them in their original historical and cultural context.
- Critically analyze and write about scholarly theories on major ANE texts.

ANES 363 : Hebrew Bible Studies. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.
PREREQUISITE: HEB 331
DESCRIPTION: Current analytical methods used in academic study and interpretation of the Hebrew Bible.

**Course Outcomes**

- Students will be introduced to the variety of interpretative strategies and theories about the Hebrew Bible
- Students will analyze and interpret passages of scripture from the Hebrew Bible assisted by and comparing LDS and non-LDS sources and approaches.
- Students will reflect and write about their own approach to the Hebrew Bible.

ANES 430R : Advanced Topics in Ancient Near Eastern Studies. (3:3:0)
WHEN TAUGHT: Winter Even Yrs.
DESCRIPTION: Seminar involving in-depth examination of an ancient Near Eastern topic and then writing about it.

**Course Outcomes**

- Students will demonstrate at a senior level their ability to research and write / present in-depth about a particular ANE topic, situating it within the larger field of ANES, employing both rigor and academic integrity.

HEB 331 : Readings in the Hebrew Scriptures 1. (4:5:0)
WHEN TAUGHT: Fall
PREREQUISITE: Heb 132, 201, or equivalent.
DESCRIPTION: Grammar review and vocabulary building through reading historical and prophetic books.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Define the top 300 vocabulary words from the Hebrew Bible.2. Analyze and discuss the fundamental elements of Hebrew grammar.3. Analyze and categorize the verbal system: pa'al, piel, hiphil, hophal, niphal, pual, and hithpael.

HEB 431 : Readings in the Hebrew Scriptures 2. (4:4:0)
WHEN TAUGHT: Winter
PREREQUISITE: HEB 331
DESCRIPTION: Readings in the poetic and wisdom literature.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Define the top 600 vocabulary words from the Hebrew Bible.2. Analyze and discuss the fundamental elements of Hebrew grammar.3. Analyze and categorize the verbal system: pa'al, piel, hiphil, hophal, niphal, pual, and hithpael.4. Understand elemental forms of Hebrew parallelistic poetry and figures of speech.

4. Complete two enrollments in the following:
HEB 432R : Ancient Hebrew Texts. (2:2:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: HEB 331

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Define the top 600 vocabulary words from the Hebrew Bible.2. Analyze and discuss the fundamental elements of Hebrew grammar.3. Analyze and categorize the verbal system: pa'al, piel, hiphil, hophal, niphal, pual, and hithpael.

- Greek New Testament and related literature:
  1. Complete the following:
  ANES 332 : Readings in Classical Near Eastern Texts. (3:3:0)
  WHEN TAUGHT: Fall Even Yrs.
  DESCRIPTION: Reading and analyzing major ancient Near Eastern texts in English translation. Methodology for dealing with potential biblical parallels.

  **Course Outcomes**

  - Students will be able to competently read, analyze, and communicate about Classical Near Eastern texts.
  - Extrapolate cultural and historical information from primary texts, while accurately placing them in their original historical and cultural context.
  - Critically analyze and write about scholarly theories on major Classical Near Eastern texts.

CL CV 363 : Judaism and Christianity in the Classical Near East. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Historical and cultural contexts of early Judaism and Christianity; analysis of major Jewish and Christian texts produced in classical Near East; methodological emphasis.

**Course Outcomes**

There are no course outcomes available

CLSCS 430R : (Clscs-Hist) Topics in Greek and Roman History. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Cl Cv 304-Hist 247 and Greek 201 (Greek topics) or Cl Cv 307-Hist 248 and Latin 201 (Roman topics).

DESCRIPTION: Topics vary (e.g., rise of the Greek city-state, Greek political thought, classical historiography, Rome and the Etruscans, imperial Rome).

**Course Outcomes**

There are no course outcomes available

: Greek City-State.

**Course Outcomes**

: Classical Historiography.

**Course Outcomes**

: Hellenistic World.

**Course Outcomes**

: Rome and Etruscans.

**Course Outcomes**

: Rise of Rome.

**Course Outcomes**

: Roman Revolution.

**Course Outcomes**

: Imperial Rome.

**Course Outcomes**

: Roman Politics.

**Course Outcomes**

: Roman Religion.

**Course Outcomes**

: Augustan Rome.

**Course Outcomes**

: Archaic Greece.

**Course Outcomes**

: Athens: Rise and Fall.

**Course Outcomes**

: 4th Century Greece.

**Course Outcomes**

: Late Roman Empire.

**Course Outcomes**

: World of New Testament.

**Course Outcomes**

: Early Christianity.

: Julio-Claudians.

**Course Outcomes**

**Or**

HIST 430R : (Hist-Clscs) Topics in Greek and Roman History. (3:3:0)

PREREQUISITE: ClCv-Hist 304 and Greek 201 (Greek topics) or ClCv-Hist 307 and Latin 201 (Roman topics).

DESCRIPTION: Topics vary (e.g., rise of the Greek city-state, Greek political thought, classical historiography, Rome and the Etruscans, imperial Rome).

**Course Outcomes**

- By approaching primary historiographical texts and secondary scholarship treating the History of Greece or Rome (depending upon the special topic chosen for the course), successful students will come to understand the history of Greece and Rome. Topics may fall anywhere within the range of events from Bronze Age Greece to the end of the Roman Empire.
- Successful students will consider available primary sources for Greek and Roman history, both prose and verse literature, and learn how to evaluate the reliability of those sources.
- Through oral reports, examinations, and research papers successful students will demonstrate the ability to critically evaluate complex historical issues and to develop original interpretations of those issues.

GREEK 101 : First-Year Greek (First Semester). (4:4:0)

WHEN TAUGHT: Fall

**Course Outcomes**

There are no course outcomes available

GREEK 102 : First-Year Greek (Second Semester). (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: GREEK 101; or departmental approval.

**Course Outcomes**

There are no course outcomes available

GREEK 201 : Intermediate Greek. (4:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: GREEK 102; or departmental approval.

DESCRIPTION: Readings from Xenophon with review and continuation of grammar.

**Course Outcomes**

There are no course outcomes available

GREEK 302 : Classical Greek Prose. (3:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: GREEK 201

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

GREEK 311 : New Testament in Greek: Gospels. (3:3:0)

PREREQUISITE: GREEK 201

**Course Outcomes**

There are no course outcomes available

2. Complete two enrollments in the following:

GREEK 411R : Greek New Testament and Early Christian Greek Texts. (3:3:0)

PREREQUISITE: GREEK 311; Greek 302 or concurrent enrollment.

DESCRIPTION: Topics include Greek New Testament, the transmission and translation of New Testament manuscripts, and selections from other early Christian Greek writings.

**Course Outcomes**

There are no course outcomes available

: Synoptic Gospels.

**Course Outcomes**

: Luke-Acts.

**Course Outcomes**

: Pauline Epistles.

**Course Outcomes**

: Apocalypse.

**Course Outcomes**

: Johannine Writings.

**Course Outcomes**

: New Testament Apocrypha.

**Course Outcomes**

: Apostolic Fathers.

**Course Outcomes**

: Pre-Nicene Fathers.

**Course Outcomes**

: Post-Nicene Fathers.

**Course Outcomes**

3. Complete six hours from the following elective courses:

ANES 353R : Archaeological Fieldwork in the Near East. (1-3:Arr:Arr)

PREREQUISITE: Ancient Near Eastern Studies coordinator's consent.

DESCRIPTION: Archaeological fieldwork and corresponding field school activities in the Near East.

**Course Outcomes**

- Credit for those students who participate in an authorized "dig" somewhere in the Near East, thus gaining firsthand experience with archaeological techiques, such as excavating, analyzing, and recording data. A written report on the experience is required for academic credit.

ANES 392R : Topics in Ancient Near Eastern Studies. (2-3:ARR:0)

DESCRIPTION: Topical studies in the ancient Near East based on student interest and faculty expertise.

**Course Outcomes**

- Students will demonstrate their ability to research and write / present in-depthabout a particular ANE topic, situating it within the larger field of ANES, employing both rigor and academic integrity.

ANTHR 351 : Archaeology and the Bible. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.; Winter Odd Yrs.

DESCRIPTION: Setting and context of the Bible as clarified and supplemented from archaeology, history, and related studies. Archaeological methods.

**Course Outcomes**

- Students will gain knowledge of the development of Biblical archaeology as a field within the overall umbrella of the discipline of anthropology. This study will include extensive study of the both the defining personalities and methodologies in this sub-area of archaeology, as well as the major excavated sites in the Levant associated with Biblical events. Students will also gain a knowledge of the historical development of the Near East through its archaeological contexts, and the debates existing between differing methodologies associated with the use of the Bible as a primary document.

**Or**

ANTHR 375 : Archaeology of Egypt. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: ANTHR 101; or ANTHR 110; or ANTHR 215

DESCRIPTION: Survey of the most important archaeological sites, artifacts, and monuments of Egypt, their cultural contexts, as well as major methodological developments in Egyptian archaeology and Egyptology.

**Course Outcomes**

- Survey of the most important archaeological sites, artifacts, and monuments of Egypt, their cultural contexts, as well as major methodological developments in Egyptian archaeology and Egyptology
- Pre-Islamic roots through Ottoman period. Sites, artifacts, and monuments of Islam. Focus on religious and cultural contexts. Relevant Islamic texts and archaeological methods for understanding medieval Islamic sites and artifacts

**Or**

ANTHR 378 : Near Eastern Archaeology. (3:2:ARR)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Peoples and culture history in Mesopotamia, Syria, Palestine, Egypt, 3500--500 B.C. Substantial reading, writing, discussion.

**Course Outcomes**

- Students will gain an introductory level understanding of the archaeology, history, and ancient cultural contexts of the major ancient civilizations of Mesopotamia, Syria, Palestine, and Egypt through readings, research assignments, and discussion.
- Students will increase their skill sets with regard to critical thinking, research, analysis of data, and writing through multiple types of course assignments including a final research paper project.

(whichever is not taken in item 1 above).

ARTHC 310 : Early Christian and Byzantine Art. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ARTHC 201

DESCRIPTION: Survey of Christian art in the Roman and Byzantine Empire from ca. 200 to 1453.

**Course Outcomes**

There are no course outcomes available

CL CV 310 : Classical Archaeology. (3:3:0)

DESCRIPTION: Major excavations and antiquities of the Mediterranean region illustrating Greco-Roman history.

**Course Outcomes**

No outcomes are available at this time.

CL CV 340R : Topics in Classical Literature and Civilization. (3:3:0)

DESCRIPTION: Classical literary genres; rhetorical, philosophical, and historical writings; relationships of art and literature; or the classical tradition in the Middle Ages and Renaissance. Topics vary.

**Course Outcomes**

There are no course outcomes available

: Greek Historians.

: Augustan Rome.

**Course Outcomes**

: Christianity and the Empire.

**Course Outcomes**

(topic must be relevant to Ancient Near Eastern Studies. The Ancient Near Eastern Studies coordinator's approval is required)

HIST 334 : History of Ancient Iraq. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Examining the social and economic aspects of the rise of cities, inter-regional trade, political exchange, and imperialism in ancient Mesopotamia using primary and secondary sources. Topics include agriculture in Babylon, cities in Mesopotamia, royal courts, Assyrian trade and markets, family and kin.

**Course Outcomes**

- Gain a historical consciousness of social and economic institutions and developments in ancient Iraq.
- Develop an ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions.
- Develop use of the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate evidence into a coherent argument or narrative expressed through a clear, well-written style and through oral communication.

NE LG 345 : Texts and Ancient Temples. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Major ancient Near Eastern texts dealing with the temple; analysis of primary elements of ancient temple type as a place of worship.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:Define the concept of sacred space and time.Understand the temples as sacred space.Analyze temple systems in the ancient world.Understand that the church, synagogue, and mosque have decisively been influenced by the temple.

NE LG 511R : Studies in Ancient Near Eastern Languages. (.5-4:4:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Grammar and reading skills.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:Understand and recognize the fundamental elements of subject grammar (i.e., Aramaic, Coptic, Egyptian, Syriac, Akkadian, etc.)Define the top 300 vocabulary words of the subject language.Analyze and categorize the verbal system.

: Akkadian.

**Course Outcomes**

: Aramaic.

**Course Outcomes**

: Coptic.

**Course Outcomes**

: Egyptian.

**Course Outcomes**

: Syriac.

**Course Outcomes**

: Ugaritic.

**Course Outcomes**

REL A 304 : Writings of Isaiah. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Teachings and prophecies of Isaiah in light of their historical context and relevance to latter-day people.

**Course Outcomes**

There are no course outcomes available

REL A 392R : Special Studies in Religion: Ancient Scripture. (.5-3:ARR:0)

OFFERED: Honors also

WHEN TAUGHT: Contact Department.

DESCRIPTION: Topical studies in religion based on student interest and teacher expertise.

**Course Outcomes**

- Students will demonstrably learn relevant doctrine, principles and/or history of a specific aspect

: Writings of John.

**Course Outcomes**

: Honors: Special Studies in Religion: Ancient Scripture.

**Course Outcomes**

: Honors: Writings of John.

**Course Outcomes**

: Special Topics in the Book of Mormon. (2:2:0)

**Course Outcomes**

(topic must be relevant to Ancient Near Eastern Studies. The Ancient Near Eastern Studies coordinator's approval is required)

Any Ancient Near Eastern Studies, Greek, or Biblical Hebrew courses not used in item 2 above.

*Hours include courses that may fulfill university core requirements.

# BA in Middle East Studies/Arabic (54–69 hours*)

Show All Course Descriptions
Hide All Course Descriptions

## The Discipline

Middle East Studies examines the Arabic-, Turkish-, and Persian-speaking peoples and countries of the Middle East from a variety of perspectives. The region itself provides the focus, but historians, political scientists, anthropologists, economists, geographers, linguists, art historians, and literary and religious scholars all provide important insights into the area, each from the context of their own discipline. Undergirding all of these perspectives is linguistic skill in Arabic, through which access to original sources, press analyses, and native speakers is possible. Middle East Studies as a whole tries to integrate these insights and to provide analysis and understanding that go beyond any single discipline.

## Career Opportunities

The Middle East Studies/Arabic major aims specifically to prepare students to work as analysts and experts on the Middle East for government agencies, businesses, and other organizations. Linguistic skill in Arabic, as well as a solid understanding of the history, politics, and culture of the region is vital to these agencies, many of them desperate for real expertise and language ability. With its integrated, interdisciplinary focus on a single region and a strong emphasis on acquiring a usable knowledge of Arabic, it is also a good liberal arts major for students planning a career in law, medicine, or business in general—in fact, any field where a broad understanding and finely honed analytical and writing skills are valued.

## Program Requirements | View MAP

**Important Note:** In order to gain maximum academic benefit from the MESA curriculum, students should take lower-division (100- and 200-level) courses before taking upper-division (300- and 400-level) courses. Doing so will also help students avoid problems in scheduling classes during later semesters and in making timely progress toward graduation. For these purposes, by the end of the second semester as a MESA major, students are required to create a course map and have it reviewed and approved by both the MESA faculty coordinator and advisor from the International and Area Studies Advisement Office.

1. Complete the following "gateway" courses (i.e. prerequisites and basic skills):

ARAB 101 : First-Year Arabic. (4:5:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Basic skills of spoken and written Arabic.
NOTE: Suggested first class for students learning Arabic.

**Course Outcomes**
There are no course outcomes available

ARAB 102 : First-Year Arabic. (4:5:0)
WHEN TAUGHT: Winter; Spring; Summer
DESCRIPTION: Second-semester Arabic. Basic language skills, both spoken and written.

**Course Outcomes**
- Demonstrate expanding ability to socially interact with Arabs appropriately.
- Converse successfully with native speakers of Arabic about likes/dislikes, home/school, health, schedule, plans, and accomplish basic tasks such as shopping.
- Comprehend simple but longer written and audio/video texts on an expanded range of familiar topics.
- Write descriptive prose and narrate events occuring in the past, present and future.
- Demonstrate increasing ability to appropriately employ formal and vernacular Arabic.
- Significantly increase control of foundational structures (verb conjugations, complex sentence types).
- Employ expanded range of language learning and communication strategies (knowledge of root and pattern system, circumlocution).

(Arab 101 and 102 may be waived for students with appropriate lanaguage experience.)
MESA 201 : Introduction to Middle East Studies. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Introduction to Middle East from historical, art/literary, and various social science perspectives, including introduction to disciplinary methodologies and major issues of interest.

**Course Outcomes**

- This course identifies major areas of study necessary to understand the culture, context, and areas of current concern in the Middle East and poses questions as to how we may go about learning.

MESA 250 : Introduction to the Religion of Islam. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Exploring the rise of Islam, the life of Muhammad, basic beliefs and practices, major figures and movements, and contemporary political and social issues.

**Course Outcomes**

- Study of the sources, history, principles of religion, law, and practice from the founding of Islam until the present period.

POLI 200 : Political Inquiry. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Methodology of political science, including theory and techniques of qualitative and quantitative research design.

NOTE: Prerequisite to all upper-division courses.

**Course Outcomes**

There are no course outcomes available

2. Complete the following prerequisites for Study Abroad:

ARAB 201 : Second-Year Arabic. (4:5:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: Arab 102 or equivalent experience.

DESCRIPTION: Significantly expanding proficiency in Modern Standard Arabic and increasing conversational repertoire.

**Course Outcomes**

- Speak Colloquial Arabic at the ACTFL intermediate low level. Show an elementary ability to distinguish between Colloquial and Standard Arabic in word choice and pronunciation.
- Read and understand simple written Standard Arabic texts at the ACTFL intermediate low level.
- Understand spoken conversations and dialogues in Standard and Colloquial Arabic at the ACTFL intermediate low level.
- Show a mastery of basic verb conjugations, idaafa, and other basic structures, with some familiarity with more advanced structures (passive, active and passive participles, relative clauses, diptotes and other vowelling issues).

ARAB 202 : Intermediate Arabic. (4:5:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: Arab 201 or equivalent experience.

DESCRIPTION: Continuation of Arab 201.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Speak Colloquial Arabic at the ACTFL intermediate mid level. Show a developing ability to distinguish between Colloquial and Standard Arabic in word choice and pronunciation.
- Read and understand simple written Standard Arabic texts at the ACTFL intermediate mid level. Show a developing ability to understand front page news articles on familiar topics.
- Understand spoken conversations and dialogues in Standard and Colloquial Arabic at the ACTFL intermediate mid level.
- Write short essays, journal entries and notes at the ACTFL novice high level.
- Show a mastery of verb conjugations (including defective verbs), passive, and other basic structures, and a developing familiarity with advanced Arabic grammatical constructions like cognate accusative, false idaafa, tamyiiz, and haal. Demonstrate an ability to vowel simple texts accurately, and a developing ability to vowel more complicated texts.
- Vocabulary MasteryDemonstrate a mastery of basic Arabic vocabulary, both colloquial and standard (2500 words).

GEOG 271 : Middle East. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Physical and cultural geography of Southwest Asia and North Africa, emphasizing the cultural mosaic, geopolitics, environment, and resources of the region.

**Course Outcomes**

There are no course outcomes available

IHUM 242 : Introduction to the Humanities of the Islamic World. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Major arts of Islamic cultures in their historical, religious, and philosophical settings.

**Course Outcomes**

There are no course outcomes available

3. Complete the one-semester Study Abroad program in the Arab world, during which the following Arabic language courses required for the major are completed:

ARAB 211R : Second-Year Conversation. (2:2:0)

OFFERED: Study Abroad only.
WHEN TAUGHT: Fall
PREREQUISITE: Arab 202.
DESCRIPTION: Intermediate spoken Arabic.

**Course Outcomes**

- Speak Colloquial Arabic at the ACTFL beginning hi level. Show an ability to distinguish between Colloquial and Standard Arabic in word choice and pronunciation.
- Demonstrate a mastery of the vocabulary used to describe, narrate and express basic daily functions and interactions

ARAB 300 : Advanced Modern Standard Arabic. (4:5:0)

OFFERED: Study Abroad only.
WHEN TAUGHT: Fall
PREREQUISITE: ARAB 202
DESCRIPTION: Advanced work in reading, writing, listening, speaking.

**Course Outcomes**

- Read and understand written Standard Arabic texts at the ACTFL Advanced Lo level. Demonstrate an ability to read and comprehend front page news articles fluently with little recourse to a dictionary.
- Write short essays, journal entries and notes at the ACTFL intermediate mid level.

ARAB 302 : Newspaper Arabic. (4:5:0)

OFFERED: Study Abroad only.
WHEN TAUGHT: Fall
PREREQUISITE: ARAB 202
DESCRIPTION: Extensive reading of Arabic newspapers and magazines, with appropriate vocabulary building.

**Course Outcomes**

- Read and understand written Standard Arabic texts at the ACTFL Advanced Lo level. Demonstrate an ability to read and comprehend front page news articles fluently with little recourse to a dictionary.
- Write short essays, journal entries and notes at the ACTFL intermediate mid level.

ARAB 311R : Third-Year Conversation. (2:2:0)

OFFERED: Study Abroad only.
WHEN TAUGHT: Fall
PREREQUISITE: ARAB 202
DESCRIPTION: Advanced conversation skills.

**Course Outcomes**

- Speak Colloquial Arabic at the ACTFL intermediate hi level. Show an ability to distinguish between Colloquial and Standard Arabic in word choice and pronunciation.
- Demonstrate a mastery of the vocabulary used to describe, narrate and express opinions about current events.

ARAB 331 : Spoken Arabic. (4:5:0)

OFFERED: Study Abroad only.
WHEN TAUGHT: Fall
PREREQUISITE: ARAB 202
DESCRIPTION: Intensive study of the spoken language.

**Course Outcomes**

- Speak Colloquial Arabic at the ACTFL intermediate hi level. Show an ability to distinguish between Colloquial and Standard Arabic in word choice and pronunciation.
- Demonstrate a mastery of the vocabulary necessary to narrate, describe and express opinion on a variety of topics.
- Demonstrate a command of the basic rules of grammatical spoken Arabic: agreement, verb conjugation, word order, etc., and an increasing command of native-like expression, word choice and idiomatic expression.

4. Complete the following courses:

HIST 240 : Middle East History to 1800. (3:3:0)

WHEN TAUGHT: Fall
DESCRIPTION: History of the Middle East from the rise of of Islam until 1800.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, cultural and religious developments in the Islamic Near East between approximately AD 640-1800.
- Students will be able to analyze and interpret translations of primary source documents from the Islamic

Near East.
- Students will be able to analyze historical questions and place them in a historiographical context..

HIST 241 : Middle East History from 1800. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: History of the Middle East in the modern period form 1800; rise of nation states, relationship with West, role of Islam.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in Middle East and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.
- Demonstrate how faith and reason intersect.

MESA 350 : Islam in Contemporary Society. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MESA 250

DESCRIPTION: Islam in modern society: doctrine, practices, institutions, approaches to the challenges of modern life; the rise of fundamentalism.

**Course Outcomes**

- Class on issues which face contemporary Muslims throughout world.

POLI 357 : Middle East: Political Systems. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Poli 200.

DESCRIPTION: Social, philosophical, and religious impact on Middle East political institutions in an era of modernization and conflict.

**Course Outcomes**

There are no course outcomes available

MESA 495 : Senior Seminar in Middle East Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PL SC 200 & ARAB 302

DESCRIPTION: Capstone course, including major research paper demonstrating ability to integrate cross-disciplinary information and methodology.

**Course Outcomes**

- The Capstone Seminar is the final course in the major. It combines in-depth research on a narrow topic with a research, analysis and writing of a substantive research paper in multiple drafts utilizing peer reviews at two stages, an oral presentation of findings, and research utilizing Arabic sources.

5. Complete six hours from the following elective courses:

ANTHR 340 : Peoples of the Middle East. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Ecology, social organization, and beliefs of nomadic, rural, and urban groups between western Africa and Pakistan.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will gain an introductory level understanding of the variety of cultures, ethnic groups, religious variances, and competing political entities representative of the regions included in the MIddle East. Special emphasis will be placed on applying this knowledge to archaeological and anthropological perspectives, disciplines, and professions.
- Through course assignments, students will increase their skills in creative thinking, analysis of data, research, and writing.
- Through course assignments, students will gain a knowledge and demonstrate their comprehension of the ecologies, social organizations, religious beliefs, and variances between nomadic, rural, and urban groups in the Middle East.

ANTHR 379 : Archaeology of Islam. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

RECOMMENDED: Anthr 101, 110, or 205.

DESCRIPTION: Pre-Islamic roots through Ottoman period. Sites, artifacts, and monuments of Islam. Focus on religious and cultural contexts. Relevant Islamic texts and archaeological methods for understanding medieval Islamic sites and artifacts.

**Course Outcomes**

- Pre-Islamic roots through Ottoman period. Sites, artifacts, and monuments of Islam. Focus on religious and cultural contexts. Relevant Islamic texts and archaeological methods for understanding medieval Islamic sites and artifacts

FLANG 101R : First-Year Language Study. (4:5:1)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Beginning speaking, listening, reading, and writing skills.

**Course Outcomes**

- Speak the target language well enough to satisfy immediate needs related to basic social situations, simple transactions, basic food and lodging, and routine travel.
- Understand written and spoken target language relating to familiar topics.
- In the target language, write short, simple messages consisting of structurally-accurate sentences on familiar topics.
- Function appropriately in routine, familiar situations in the target culture.

(Turkish or Persian)

FLANG 102R : First-Year Language Study. (4:5:1)

WHEN TAUGHT: Contact Department.

PREREQUISITE: FLANG 101R

DESCRIPTION: Second-semester speaking, listening, reading, and writing skills.

NOTE: Teacher may waive prerequisite based on prior experience.

**Course Outcomes**

No outcomes are available at this time.

(Turkish or Persian)

HEB 101 : First-Year Modern Hebrew 1. (4:5:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Modern Hebrew as spoken in Israel today.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:- Speak Modern Hebrew at beginning levels, utilizing pa'al verbs- Read and engage beginning level texts in Hebrew, and express thoughts and ideas in written Hebrew- Understand the modern Israeli cultural tradition (including music, art, and literature)

HEB 102 : First-Year Modern Hebrew 2. (4:5:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Modern Hebrew as spoken in Israel today.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:- Speak Modern Hebrew at beginning levels, demonstrating an ability to communicate with others- Use pa'al, pi'el, hif'il, and hitpa'el present and past tense verbs correctly- Read and engage beginning level texts in Hebrew- Express thoughts and ideas in written Hebrew- Appreciate and value the modern Israeli cultural tradition (including music, art, and literature)

HEB 201 : Second-Year Modern Hebrew 1. (4:5:0)

WHEN TAUGHT: Fall

PREREQUISITE: Heb 102 or equivalent.

**Course Outcomes**

- Speak Modern Hebrew at intermediate levels, demonstrating an ability to communicate with others
- Use and understand past tense as well as pa'al and piel future tense verbs
- Read and comprehend intermediate level texts in modern Hebrew, including newspapers and Israeli literature
- Write in Modern Hebrew at the intermediate level
- Appreciate and value the modern Israeli cultural tradition (including music, art, and literature)

HIST 239 : Ancient Near East, 330 BC - 640 AD. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Cultures and empires of the Near East (Persia, Hellenistic kingdoms, Judaism, early Christianity, Rome, and Byzantium) from Alexander the Great to the Arab conquests.

**Course Outcomes**

- Gain a firsthand understanding of the Hellenistic and Christian Near East through studying and analyzing primary sources, using a template of (suggested) questions
- Understand basic issues of faith and reason, as they relate to Christianity and Judaism in the formative period of the former
- Master an early Christian primary source well enough to present, as a group, its gist, meaning, and significance
- Understand how the political and social changes in the Eastern Mediterranean in the Hellenistic period contributed to the development of science, technology, philosophy, and religion
- Understand the basic historical issues surrounding the origin of Christianity

- Understand the development of the Christian Roman Empire (Byzantium)

HIST 244 : Jewish History: A.D. 70 to the Present. (3:3:0)

IAS 354R : Model Arab League Preparation. (.5-3:Arr:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Understanding Middle Eastern governments and foreign policies. Preparation and attendance at the Model Arab League Conference.

**Course Outcomes**

There are no course outcomes available

IAS 399R : Academic Internship: International. (.5-9:ARR:ARR)

PREREQUISITE: Acceptance into program.

DESCRIPTION: Individualized work or volunteer experience in an international setting.

NOTE: Class must be coordinated through International Study Programs.

**Course Outcomes**

- · Apply skills and material learned in traditional courses to a real-world workplace environment.· Demonstrate proficiency in the skills required by the internship supervisor.· Demonstrate an ability to link insights gained from traditional classes and from real-world workplace experiences.

(with prior approval)

MESA 398R : Directed Middle East Study. (1-3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent; Middle East Studies/Arabic coordinator's consent.

DESCRIPTION: Study and research in the Middle East.

**Course Outcomes**

- This course is for students who wish to follow a well-defined, advanced course of study achieved through readings, research and critique supervised by a professor.

MESA 399R : Academic Internship. (1-3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Middle East Studies/Arabic coordinator's consent.

DESCRIPTION: Individualized work or volunteer experience in the Middle East or with an organization dealing with the Middle East. Must be coordinated through International Study Programs or the Washington Seminar and with the consent of the Middle East Studies/Arabic coordinator.

**Course Outcomes**

No outcomes are available at this time.

MESA 451 : The Figure of Muhammad in Islamic Tradition. (3:3:0)

PREREQUISITE: ARAB 202

DESCRIPTION: Introduction to Muslim views regarding Muhammad as found in two significant Islamic textual traditions: The Sira (biography)/Maghazi (battles) and Hadith (acts) of Muhammad.

**Course Outcomes**

No outcomes are available at this time.

MESA 467R : Topics in Middle East Studies. (.5-3:Arr.:0)

DESCRIPTION: Topics vary.

**Course Outcomes**

- Substantative Research PapersLibrary/Internet Research

MESA 468R : Key Issues In Understanding the Middle East. (.5-3:Arr.:Arr.)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

DESCRIPTION: Topics vary. Guest and BYU professors teach subjects in an intensive format over a limited time period through lectures and readings.

**Course Outcomes**

- Course on special topics taught by guest professors at the University.

MESA 494 : Capstone Arabic. (1:1:0)

WHEN TAUGHT: Winter

PREREQUISITE: ARAB 300 & ARAB 302

DESCRIPTION: Readings in Arabic texts supporting research for the MESA capstone seminar.

**Course Outcomes**

- Capstone Arabic provides an advanced course in reading Arabic primary and secondary sources for Capstone Seminar research.

POLI 381 : International Relations of the Middle East. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Interregional relations and conflicts, political economics, Arab nationalism, processes of political change, alliances, and superpower relations.

**Course Outcomes**

No outcomes are available at this time.

POLI 452 : Islam and Politics. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Tensions and accommodations between religion and politics in Muslim nations.

**Course Outcomes**

There are no course outcomes available

POLI 474 : Arab-Palestinian-Israeli Conflict. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Emphasizes historical background, current situation, and alternatives leading to conflict resolution.

**Course Outcomes**

There are no course outcomes available

Any other 300- or 400-level Arabic courses not already taken.

**Note:** Students with a second major in Arabic Language cannot double count the same upper-division Arabic courses for both the double major and for MESA elective credit.

## *Middle East/Government Service Track*

Students interested in using their Arabic language expertise to work in government (Department of State, Central Intelligence Agency, National Security Agency, military services, Federal Bureau of Investigation, etc.) are srongly recommended to complete the following courses, some of which will count for general education credit.

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

: Honors Economic Principles and Problems.

**Course Outcomes**

POLI 110 : American Government and Politics. (3:3:0)

OFFERED: Honors also. Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Origin and development of federal Constitution; national, state, and local governments and politics.

**Course Outcomes**

There are no course outcomes available

POLI 150 : Comparative Government and Politics. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Patterns of European, Asian, Latin American, and other political systems.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

There are no course outcomes available

POLI 376 : U.S. Foreign Policy. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Formation, implementation, analysis, and criticism of themes in American foreign policy.

**Course Outcomes**

There are no course outcomes available

**Note:** Econ 110 and Poli 110 combined may fill the American Heritage general education requirement.

Other courses to consider:

GEOG 341 : Political Geography. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Spatial analysis of global politics; focus on geopolitics, territory and conflict, nationalism, and the politics of resources.

**Course Outcomes**

There are no course outcomes available

POLI 270 : Principles of International Relations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: Poli 200.

DESCRIPTION: An introduction to the subfield of international relations for advanced students and majors. Basic concepts, theories, and methods of international relations and political science.

**Course Outcomes**

There are no course outcomes available

POLI 313 : Interest Groups. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 110 or 210; Poli 200.

DESCRIPTION: Theories on formation and maintenance of interest groups; tactics of groups in legislative, executive, bureaucratic, and court settings; influence of groups on elections and public policy.

**Course Outcomes**

There are no course outcomes available

POLI 315 : Congress and the Legislative Process. (3:3:0)

WHEN TAUGHT: Contact Department.

RECOMMENDED: Poli 110 or 210; Poli 200.

DESCRIPTION: Election process; structure, organization, and procedures of legislative bodies; relations with pressure groups, the president, and executive branch.

**Course Outcomes**

There are no course outcomes available

POLI 321 : The Media in American Politics. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: News media's role in processes of American politics, including electoral process, legislative process, and public policy-making.

**Course Outcomes**

There are no course outcomes available

POLI 371 : Foreign Policy Analysis. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200; Poli 170 or 270.

DESCRIPTION: Survey of research regarding multiple levels of foreign policy analysis: individual, group, bureaucratic, societal, economic, systemic.

**Course Outcomes**

No outcomes are available at this time.

POLI 372 : International Political Economy. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Political implications of international trade, investment, and monetary policies within an increasingly interdependent global context; transnationalism.

**Course Outcomes**

There are no course outcomes available

POLI 373 : International Law. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Nature and function of international law; recognition, succession, jurisdiction rights, and immunities of states; nationality and jurisdiction over nations.

**Course Outcomes**

There are no course outcomes available

POLI 375 : International Organizations. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 200.

DESCRIPTION: International institutions; transnational relations; rise of newer political organizations: League of Nations, United Nations, European communities, world religions, multinational corporations, terrorist groups, global regimes.

**Course Outcomes**

There are no course outcomes available

POLI 377 : National Security Affairs. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Foreign policy, defense strategy, and intelligence.

**Course Outcomes**

There are no course outcomes available

POLI 378 : International Conflict. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Poli 150, 170, 250, or 270; Poli 200.

DESCRIPTION: Causes of war; alliances and empires; military innovation; civil-military relations; fungibility of forces; terrorism; security studies methods; use and misuse of history.

**Course Outcomes**

There are no course outcomes available

REL A 301 : The Old Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Historical background, narrative, and doctrines of the Old Testament. Covers Genesis through 2 Samuel.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

REL C 351 : Survey of World Religions. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Explores the origins, theological doctrines, scriptural works, and religious practices of several internationally religious

traditions, including Christianity, Islam, Judaism, Hinduism, Sikhism, Buddhism, Taoism, Confucianism, and Shinto. Comparisions are offered between these religions, and Latter-day Saints belief and practice.

## Program Requirements

1. Complete the following core courses:

HIST 238 : Ancient Near East to 330 BC. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Ancient cultures of the Near East (Egypt, Mesopotamia, Syro-Palestine, Anatolia, Iran) from the beginnings of civilization to the conquests of Alexander the Great.

**Course Outcomes**

- Students will gain a historical consciousness of the Ancient Near East by demonstrating a critical literacy of major developments in Ancient Near East history, key historical terms, primary sources, and narratives of Ancient Near East history up to Alexander.
- Students will develop an ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions about ancient Near East primary sources.
- Students will develop use of the historical method of research effectively by skillfully and honestly using primary and secondary sources in the formation of answers to major questions surrounding the narratives of the ancient Near East
- Students will develop their writing ability through a range of pre-writing and writing assignments.

HIST 239 : Ancient Near East, 330 BC - 640 AD. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Cultures and empires of the Near East (Persia, Hellenistic kingdoms, Judaism, early Christianity, Rome, and Byzantium) from Alexander the Great to the Arab conquests.

**Course Outcomes**

- Gain a firsthand understanding of the Hellenistic and Christian Near East through studying and analyzing primary sources, using a template of (suggested) questions
- Understand basic issues of faith and reason, as they relate to Christianity and Judaism in the formative period of the former
- Master an early Christian primary source well enough to present, as a group, its gist, meaning, and significance
- Understand how the political and social changes in the Eastern Mediterranean in the Hellenistic period contributed to the development of science, technology, philosophy, and religion
- Understand the basic historical issues surrounding the origin of Christianity
- Understand the development of the Christian Roman Empire (Byzantium)

2. Complete one of the following language/literature options:
   - Hebrew Bible and related literature:
     1. Complete one course from the following:

HEB 131 : First-Year Biblical Hebrew. (4:5:0)

WHEN TAUGHT: Fall; Summer

DESCRIPTION: Old Testament Hebrew. Provides foundation in grammar and vocabulary; reading Hebrew prose texts in Bible.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Recite the Hebrew alphabet and recognize the vowels;2. Analyze and discuss most of the fundamental elements of Hebrew grammar;3. Read and translate elemental biblical historical narrative texts with limited use of a lexicon;4. Analyze and parse the verbal system: Pa'al (Qal);5. Define approximately 315 vocabulary words.

HEB 133 : Honors Hebrew and the Old Testament. (4:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: Must be taken in conjunction with specified Honors section of Rel A 301.

DESCRIPTION: Rapid survey of biblical Hebrew.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Recite the Hebrew alphabet and recognize the vowels;2. Analyze and discuss most of the fundamental elements of Hebrew grammar;3. Read and translate elemental biblical historical narrative texts with limited use of a lexicon;4. Analyze and parse the verbal system: Pa'al (Qal);5. Define approximately 315 vocabulary words.

2. Complete one course from the following:

HEB 132 : First-Year Biblical Hebrew. (4:5:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: HEB 131

DESCRIPTION: Old Testament Hebrew. Provides foundation in grammar and vocabulary; reading Hebrew prose texts in Bible.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Analyze and discuss the fundamental elements of Hebrew grammar.2. Read and translate elemental biblical historical narrative texts with limited use of a lexicon.3. Analyze and parse the verbal system: pa'al, niphal, piel, pual, hiphil, hophal, hithpael.4. Define approximately 400 vocabulary words.

HEB 134 : Honors Hebrew and the Old Testament. (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: Must be taken in conjunction with specified Honors section of Rel A 302.

DESCRIPTION: Rapid survey of biblical Hebrew.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:1. Analyze and discuss the fundamental elements of Hebrew grammar.2. Read and translate elemental biblical historical narrative texts with limited use of a lexicon.3. Analyze and parse the verbal system: pa'al, niphal, piel, pual, hiphil, hophal, hithpael.4. Define approximately 400 vocabulary words.

3. Complete one course from the following:

REL A 211 : The New Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Historical background, narrative, and doctrines of the New Testament. Covers the life and teachings of Jesus Christ set forth in the four Gospels.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

REL A 212 : The New Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Historical background, narrative, and doctrines of the New Testament. Covers the Acts of the Apostles through the Revelation of John.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

4. Complete the following:

REL A 301 : The Old Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Historical background, narrative, and doctrines of the Old Testament. Covers Genesis through 2 Samuel.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

REL A 302 : The Old Testament. (2:2:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

DESCRIPTION: Historical background, narrative, and doctrines of the Old Testament. Covers 1 Kings through Malachi.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

- Greek New Testament and related literature:
  1. Complete the following:

GREEK 311 : New Testament in Greek: Gospels. (3:3:0)

PREREQUISITE: GREEK 201

**Course Outcomes**

There are no course outcomes available

GREEK 411R : Greek New Testament and Early Christian Greek Texts. (3:3:0)

PREREQUISITE: GREEK 311; Greek 302 or concurrent enrollment.

DESCRIPTION: Topics include Greek New Testament, the transmission and translation of New Testament manuscripts, and selections from other early Christian Greek writings.

**Course Outcomes**

There are no course outcomes available

: Synoptic Gospels.

**Course Outcomes**

: Luke-Acts.

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of—how selected Old Testament passages can be applied to daily living.

3. Complete three hours from the following:

ANES 201 : Introduction to Ancient Near Eastern Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Historical background, research skills, and methods of academic inquiry relevant to ancient Near Eastern Studies.

**Course Outcomes**

- Introduce students to the field of Ancient Near Eastern Studies, including the historical and geographical breadth from 3000 b.c.e down to 600 c.e., the development of the field of study, the major texts and their standard editions, research skills, major terms, and employment possibilities.
- Introduce students to the issues in the study of the Ancient Near East that have an impact on understanding the Hebrew Bible and the New Testament, including a discussion on the challenges "believing" students face, LDS in particular. This will include a discussion of some of the ethical issues in current scholarship.
- Help students critically read, discuss, research and write about ancient texts with methodological rigor and academic integrity.

ANES 310 : History and Culture of Ancient Israel. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: HIST 238; or HIST 239

DESCRIPTION: Israelite history and culture in Canaan/Israel from c. 2000 B.C. to A.D. 200. Methodology for using the Bible in historical research.

**Course Outcomes**

- Students will know and be able to interpret the significant events and developments in the history of ancient Israel within the large context of the ANE, and know and be able to interpret the main features of the culture of ancient Israel, based on textual and artifactual data.
- be able to analyze and discuss the value and limitations of the Bible as a reliable source of historical information, and be able to relate and analyze major opinions on this issue in the field of biblical studies.
- be able to research, analyze, and write clearly and persuasively about the issues just listed.
- have considered how their own faith-views impact their approach to certain of the issues just listed.

ANES 331 : Readings in Ancient Near Eastern Texts to 330 B.C. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: HIST 238

DESCRIPTION: Reading and analysis of major ancient Near Eastern texts in English translation. Methodology for dealing with potential biblical parallels.

**Course Outcomes**

- Students will be able to competently read, analyze, and communicate about ANE texts.
- Extrapolate cultural and historical information from primary texts, while accurately placing them in their original historical and cultural context.
- Critically analyze and write about scholarly theories on major ANE texts.

ANES 332 : Readings in Classical Near Eastern Texts. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Reading and analyzing major ancient Near Eastern texts in English translation. Methodology for dealing with potential biblical parallels.

**Course Outcomes**

- Students will be able to competently read, analyze, and communicate about Classical Near Eastern texts.
- Extrapolate cultural and historical information from primary texts, while accurately placing them in their original historical and cultural context.
- Critically analyze and write about scholarly theories on major Classical Near Eastern texts.

ANES 392R : Topics in Ancient Near Eastern Studies. (2-3:ARR:0)

DESCRIPTION: Topical studies in the ancient Near East based on student interest and faculty expertise.

**Course Outcomes**

- Students will demonstrate their ability to research and write / present in-depthabout a particular ANE topic, situating it within the larger field of ANES, employing both rigor and academic integrity.

ANTHR 351 : Archaeology and the Bible. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.; Winter Odd Yrs.

DESCRIPTION: Setting and context of the Bible as clarified and supplemented from archaeology, history, and related studies. Archaeological methods.

**Course Outcomes**

- Students will gain knowledge of the development of Biblical archaeology as a field within the overall umbrella of the discipline of anthropology. This study will include extensive study of the both the defining personalities and methodologies in this sub-area of archaeology, as well as the major excavated sites in the Levant associated with Biblical events. Students will also gain a knowledge of the historical development of the Near East through its archaeological contexts, and the debates existing between differing methodologies associated with the use of the Bible as a primary document.

ANTHR 378 : Near Eastern Archaeology. (3:2:ARR)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Peoples and culture history in Mesopotamia, Syria, Palestine, Egypt, 3500--500 B.C. Substantial reading, writing, discussion.

**Course Outcomes**

- Students will gain an introductory level understanding of the archaeology, history, and ancient cultural contexts of the major ancient civilizations of Mesopotamia, Syria, Palestine, and Egypt through readings, research assignments, and discussion.
- Students will increase their skill sets with regard to critical thinking, research, analysis of data, and writing through multiple types of course assignments including a final research paper project.

ARTHC 310 : Early Christian and Byzantine Art. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ARTHC 201

DESCRIPTION: Survey of Christian art in the Roman and Byzantine Empire from ca. 200 to 1453.

**Course Outcomes**

There are no course outcomes available

CL CV 363 : Judaism and Christianity in the Classical Near East. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Historical and cultural contexts of early Judaism and Christianity; analysis of major Jewish and Christian texts produced in classical Near East; methodological emphasis.

**Course Outcomes**

There are no course outcomes available

HIST 334 : History of Ancient Iraq. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Examining the social and economic aspects of the rise of cities, inter-regional trade, political exchange, and imperialism in ancient Mesopotamia using primary and secondary sources. Topics include agriculture in Babylon, cities in Mesopotamia, royal courts, Assyrian trade and markets, family and kin.

**Course Outcomes**

- Gain a historical consciousness of social and economic institutions and developments in ancient Iraq.
- Develop an ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions.
- Develop use of the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate evidence into a coherent argument or narrative expressed through a clear, well-written style and through oral communication.

NE LG 340 : Ancient Near Eastern Mythology. (3:3:0)

DESCRIPTION: Major themes in mythological literature of Egypt, Canaan, Mesopotamia, Anatolia, and ancient Iran. All readings in English.

**Course Outcomes**

No outcomes are available at this time.

NE LG 345 : Texts and Ancient Temples. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Major ancient Near Eastern texts dealing with the temple; analysis of primary elements of ancient temple type as a place of worship.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:Define the concept of sacred space and time.Understand the temples as sacred space.Analyze temple systems in the ancient world.Understand that the church, synagogue, and mosque have decisively been influenced by the temple.

## Program Requirements

1. Complete eight hours in Arabic, modern Hebrew, Persian, or Turkish.

2. Complete the following:

MESA 201 : Introduction to Middle East Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to Middle East from historical, art/literary, and various social science perspectives, including introduction to disciplinary methodologies and major issues of interest.

**Course Outcomes**
- This course identifies major areas of study necessary to understand the culture, context, and areas of current concern in the Middle East and poses questions as to how we may go about learning.

MESA 250 : Introduction to the Religion of Islam. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Exploring the rise of Islam, the life of Muhammad, basic beliefs and practices, major figures and movements, and contemporary political and social issues.

**Course Outcomes**
- Study of the sources, history, principles of religion, law, and practice from the founding of Islam until the present period.

3. Complete one course from the following:

ANTHR 340 : Peoples of the Middle East. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Ecology, social organization, and beliefs of nomadic, rural, and urban groups between western Africa and Pakistan.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**
- Students will gain an introductory level understanding of the variety of cultures, ethnic groups, religious variances, and competing political entities representative of the regions included in the MIddle East. Special emphasis will be placed on applying this knowledge to archaeological and anthropological perspectives, disciplines, and professions.
- Through course assignments, students will increase their skills in creative thinking, analysis of data, research, and writing.
- Through course assignments, students will gain a knowledge and demonstrate their comprehension of the ecologies, social organizations, religious beliefs, and variances between nomadic, rural, and urban groups in the Middle East.

GEOG 271 : Middle East. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Physical and cultural geography of Southwest Asia and North Africa, emphasizing the cultural mosaic, geopolitics, environment, and resources of the region.

**Course Outcomes**

There are no course outcomes available

HIST 240 : Middle East History to 1800. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: History of the Middle East from the rise of of Islam until 1800.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, cultural and religious developments in the Islamic Near East between approximately AD 640-1800.
- Students will be able to analyze and interpret translations of primary source documents from the Islamic Near East.
- Students will be able to analyze historical questions and place them in a historiographical context..

HIST 241 : Middle East History from 1800. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: History of the Middle East in the modern period form 1800; rise of nation states, relationship with West, role of Islam.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in Middle East and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.
- Demonstrate how faith and reason intersect.

IHUM 242 : Introduction to the Humanities of the Islamic World. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Major arts of Islamic cultures in their historical, religious, and philosophical settings.

**Course Outcomes**

There are no course outcomes available

POLI 357 : Middle East: Political Systems. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Poli 200.

DESCRIPTION: Social, philosophical, and religious impact on Middle East political institutions in an era of modernization and conflict.

**Course Outcomes**

There are no course outcomes available

4. Complete one course from the following:

ANTHR 340 : Peoples of the Middle East. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Ecology, social organization, and beliefs of nomadic, rural, and urban groups between western Africa and Pakistan.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

**Course Outcomes**

- Students will gain an introductory level understanding of the variety of cultures, ethnic groups, religious variances, and competing political entities representative of the regions included in the MIddle East. Special emphasis will be placed on applying this knowledge to archaeological and anthropological perspectives, disciplines, and professions.
- Through course assignments, students will increase their skills in creative thinking, analysis of data, research, and writing.
- Through course assignments, students will gain a knowledge and demonstrate their comprehension of the ecologies, social organizations, religious beliefs, and variances between nomadic, rural, and urban groups in the Middle East.

GEOG 271 : Middle East. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Physical and cultural geography of Southwest Asia and North Africa, emphasizing the cultural mosaic, geopolitics, environment, and resources of the region.

**Course Outcomes**

There are no course outcomes available

HIST 240 : Middle East History to 1800. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: History of the Middle East from the rise of of Islam until 1800.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, cultural and religious developments in the Islamic Near East between approximately AD 640-1800.
- Students will be able to analyze and interpret translations of primary source documents from the Islamic Near East.

- Students will be able to analyze historical questions and place them in a historiographical context..

HIST 241 : Middle East History from 1800. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: History of the Middle East in the modern period form 1800; rise of nation states, relationship with West, role of Islam.

**Course Outcomes**

- Gain a historical consciousness by demonstrating a knowledge of major developments in Middle East and world history and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately, and distinguish between questionable and valid historical assertions by using the historical method of research effectively by skillfully and honestly using primary and secondary sources.
- Skillfully integrate data into a coherent argument expressed through a clear, well-written style and through oral communication.
- Demonstrate how faith and reason intersect.

HIST 244 : Jewish History: A.D. 70 to the Present. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Jewish diaspora, Jewish life in Moslem and Christian countries; Jewish religious movements; development of Zionism; Jewish communities in modern Israel and the United States.

**Course Outcomes**

- Gain a historical consciousness by demonstrating an understanding of major developments in Jewish and history, and understand key historical terms and theories.
- Acquire the ability to analyze historical questions and issues clearly, assess historical information accurately and distinguish between questionable and valid historical assertions.
- Demonstrate proficiency in using the historical method of research effectively by skillfully and honestly using interdisciplinary prinary and secondary sources.
- Skillfully integrate sources into a coherent argument expressed through a clear, well-written style and throrough oral communication.
- Recognize anti-Semitic arguments.
- Gain an understanding of the complexities of modern Jewish identity.
- Appreciate the contribution of Jewish people to the world.

HIST 325 : Spain. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Political, social, and economic factors in Spanish history from Roman times to present. Emphasis on Reconquest, Golden Age, and Civil War.

**Course Outcomes**

- Students will be able to explain and analyze the major political, economic, social, intellectual, and cultural developments in Spain from Roman times to the late twentieth century
- Students will be able to analyze and interpret primary source documents.
- Students will gain experience in historical research and improve writing skills.
- Students will analyze historical questions and place them in historiographical context.

IHUM 242 : Introduction to the Humanities of the Islamic World. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Major arts of Islamic cultures in their historical, religious, and philosophical settings.

**Course Outcomes**

There are no course outcomes available

MESA 350 : Islam in Contemporary Society. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MESA 250

DESCRIPTION: Islam in modern society: doctrine, practices, institutions, approaches to the challenges of modern life; the rise of fundamentalism.

**Course Outcomes**

- Class on issues which face contemporary Muslims throughout world.

POLI 357 : Middle East: Political Systems. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Poli 200.

DESCRIPTION: Social, philosophical, and religious impact on Middle East political institutions in an era of modernization and conflict.

**Course Outcomes**

There are no course outcomes available

POLI 474 : Arab-Palestinian-Israeli Conflict. (3:3:0)

PREREQUISITE: Poli 200.

DESCRIPTION: Emphasizes historical background, current situation, and alternatives leading to conflict resolution.

**Course Outcomes**

There are no course outcomes available

## Undergraduate Courses

### 200-Level Courses

ANES 201 : Introduction to Ancient Near Eastern Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Historical background, research skills, and methods of academic inquiry relevant to ancient Near Eastern Studies.

**Course Outcomes**
- Introduce students to the field of Ancient Near Eastern Studies, including the historical and geographical breadth from 3000 b.c.e down to 600 c.e., the development of the field of study, the major texts and their standard editions, research skills, major terms, and employment possibilities.
- Introduce students to the issues in the study of the Ancient Near East that have an impact on understanding the Hebrew Bible and the New Testament, including a discussion on the challenges “believing” students face, LDS in particular. This will include a discussion of some of the ethical issues in current scholarship.
- Help students critically read, discuss, research and write about ancient texts with methodological rigor and academic integrity.

### 300-Level Courses

ANES 310 : History and Culture of Ancient Israel. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: HIST 238; or HIST 239

DESCRIPTION: Israelite history and culture in Canaan/Israel from c. 2000 B.C. to A.D. 200. Methodology for using the Bible in historical research.

**Course Outcomes**
- Students will know and be able to interpret the significant events and developments in the history of ancient Israel within the large context of the ANE, and know and be able to interpret the main features of the culture of ancient Israel, based on textual and artifactual data.
- be able to analyze and discuss the value and limitations of the Bible as a reliable source of historical information, and be able to relate and analyze major opinions on this issue in the field of biblical studies.
- be able to research, analyze, and write clearly and persuasively about the issues just listed.
- have considered how their own faith-views impact their approach to certain of the issues just listed.

ANES 331 : Readings in Ancient Near Eastern Texts to 330 B.C. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: HIST 238

DESCRIPTION: Reading and analysis of major ancient Near Eastern texts in English translation. Methodology for dealing with potential biblical parallels.

**Course Outcomes**
- Students will be able to competently read, analyze, and communicate about ANE texts.
- Extrapolate cultural and historical information from primary texts, while accurately placing them in their original historical and cultural context.
- Critically analyze and write about scholarly theories on major ANE texts.

ANES 332 : Readings in Classical Near Eastern Texts. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Reading and analyzing major ancient Near Eastern texts in English translation. Methodology for dealing with potential biblical parallels.

**Course Outcomes**
- Students will be able to competently read, analyze, and communicate about Classical Near Eastern texts.
- Extrapolate cultural and historical information from primary texts, while accurately placing them in their original historical and cultural context.

- Middle East Studies

**Course Information**

- Ancient Near Eastern Studies (ANES) Courses
- Middle East Studies/Arabic (MESA) Courses

Critically analyze and write about scholarly theories on major Classical Near Eastern texts.

ANES 353R : Archaeological Fieldwork in the Near East. (1-3:Arr:Arr)

PREREQUISITE: Ancient Near Eastern Studies coordinator's consent.

DESCRIPTION: Archaeological fieldwork and corresponding field school activities in the Near East.

**Course Outcomes**

- Credit for those students who participate in an authorized "dig" somewhere in the Near East, thus gaining firsthand experience with archaeological techiques, such as excavating, analyzing, and recording data. A written report on the experience is required for academic credit.

ANES 363 : Hebrew Bible Studies. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: HEB 331

DESCRIPTION: Current analytical methods used in academic study and interpretation of the Hebrew Bible.

**Course Outcomes**

- Students will be introduced to the variety of interpretative strategies and theories about the Hebrew Bible
- Students will analyze and interpret passages of scripture from the Hebrew Bible assisted by and comparing LDS and non-LDS sources and approaches.
- Students will reflect and write about their own approach to the Hebrew Bible.

ANES 390R : Directed Readings in Ancient Near Eastern Studies. (1-3:Arr:0)

WHEN TAUGHT: Contact Department.

RECOMMENDED: Written plan of study approved by both instructor and program coordinator.

DESCRIPTION: Directed individual study of historical topics or ancient texts.

**Course Outcomes**

There are no course outcomes available

ANES 392R : Topics in Ancient Near Eastern Studies. (2-3:ARR:0)

DESCRIPTION: Topical studies in the ancient Near East based on student interest and faculty expertise.

**Course Outcomes**

- Students will demonstrate their ability to research and write / present in-depthabout a particular ANE topic, situating it within the larger field of ANES, employing both rigor and academic integrity.

**400-Level Courses**

ANES 430R : Advanced Topics in Ancient Near Eastern Studies. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Seminar involving in-depth examination of an ancient Near Eastern topic and then writing about it.

**Course Outcomes**

- Students will demonstrate at a senior level their ability to research and write / present in-depth about a particular ANE topic, situating it within the larger field of ANES, employing both rigor and academic integrity.

ANES 495 : Senior Seminar in Ancient Near Eastern Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Capstone seminar utilizing research, analytical, and writing skills to produce a senior research paper on an ancient Near Eastern topic.

**Course Outcomes**

- Students will be ableto do rigorous research in the area of their academic specialty that will result in a 20-25 page publishable senior paper, which, in turn, should prepare the student for further graduate work.
- Students will learn how to better present their own research and do quality peer review of other's work.
- Students will learn how to navigate and understand the publishing process, includinghow to solicit publication of work and how to find scholarly symposia and other suitable venues to present their research.

## Undergraduate Courses

### 200-Level Courses

MESA 201 : Introduction to Middle East Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to Middle East from historical, art/literary, and various social science perspectives, including introduction to disciplinary methodologies and major issues of interest.

**Course Outcomes**

- This course identifies major areas of study necessary to understand the culture, context, and areas of current concern in the Middle East and poses questions as to how we may go about learning.

MESA 250 : Introduction to the Religion of Islam. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Exploring the rise of Islam, the life of Muhammad, basic beliefs and practices, major figures and movements, and contemporary political and social issues.

**Course Outcomes**

- Study of the sources, history, principles of religion, law, and practice from the founding of Islam until the present period.

### 300-Level Courses

MESA 350 : Islam in Contemporary Society. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MESA 250

DESCRIPTION: Islam in modern society: doctrine, practices, institutions, approaches to the challenges of modern life; the rise of fundamentalism.

**Course Outcomes**

- Class on issues which face contemporary Muslims throughout world.

MESA 398R : Directed Middle East Study. (1-3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent; Middle East Studies/Arabic coordinator's consent.

DESCRIPTION: Study and research in the Middle East.

**Course Outcomes**

- This course is for students who wish to follow a well-defined, advanced course of study achieved through readings, research and critique supervised by a professor.

MESA 399R : Academic Internship. (1-3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Middle East Studies/Arabic coordinator's consent.

DESCRIPTION: Individualized work or volunteer experience in the Middle East or with an organization dealing with the Middle East. Must be coordinated through International Study Programs or the Washington Seminar and with the consent of the Middle East Studies/Arabic coordinator.

**Course Outcomes**

No outcomes are available at this time.

**400-Level Courses**

MESA 451 : The Figure of Muhammad in Islamic Tradition. (3:3:0)

PREREQUISITE: ARAB 202

DESCRIPTION: Introduction to Muslim views regarding Muhammad as found in two significant Islamic textual traditions: The Sira (biography)/Maghazi (battles) and Hadith (acts) of Muhammad.

**Course Outcomes**

No outcomes are available at this time.

MESA 467R : Topics in Middle East Studies. (.5-3:Arr.:0)

DESCRIPTION: Topics vary.

**Course Outcomes**

- Substantative Research PapersLibrary/Internet Research

MESA 468R : Key Issues In Understanding the Middle East. (.5-3:Arr.:Arr.)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department

DESCRIPTION: Topics vary. Guest and BYU professors teach subjects in an intensive format over a limited time period through lectures and readings.

**Course Outcomes**

- Course on special topics taught by guest professors at the University.

MESA 494 : Capstone Arabic. (1:1:0)

WHEN TAUGHT: Winter

PREREQUISITE: ARAB 300 & ARAB 302

DESCRIPTION: Readings in Arabic texts supporting research for the MESA capstone seminar.

**Course Outcomes**

- Capstone Arabic provides an advanced course in reading Arabic primary and secondary sources for Capstone Seminar research.

MESA 495 : Senior Seminar in Middle East Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PL SC 200 & ARAB 302

DESCRIPTION: Capstone course, including major research paper demonstrating ability to integrate cross-disciplinary information and methodology.

**Course Outcomes**

- The Capstone Seminar is the final course in the major. It combines in-depth research on a narrow topic with a research, analysis and writing of a substantive research paper in multiple drafts utilizing peer reviews at two stages, an oral presentation of findings, and research utilizing Arabic sources.

**Jerusalem Center Home**

**Course Information**

- Jerusalem Center Courses

# Jerusalem Center for Near Eastern Studies

## General Information

1. The Brigham Young University Jerusalem Center for Near Eastern Studies is an educational and cultural center created for study in the Near East, emphasizing religion, the humanities, and the social sciences. The Jerusalem Center has four principal goals:
    a. Provide students an opportunity to study the scriptures in the setting in which the patriarchs, prophets, and the Lord himself lived and taught, and by that study to gain understanding of and commitment to the truths of the gospel of Jesus Christ.

    b. Expand students' understanding of the religions, cultures, history, archaeology, geography, languages, and politics of the ancient and modern Near East.

    c. Foster research and creative endeavors by BYU faculty, students, and visiting scholars.

    d. Promote understanding with other peoples, cultures, and religious faiths that trace their roots to the Holy Land.
2. To achieve these goals, the Jerusalem Center offers a core curriculum with courses in the Old and New Testament and in the ancient and modern Near East. In addition, the center provides specialized courses in archaeology, geography, history, and cultures of the Near East, including language study in Hebrew and Arabic.
3. The Jerusalem Center has marvelous physical facilities on Mount Scopus overlooking the oldest part of the city of Jerusalem. Classrooms, a library, a learning center, auditoriums, student and faculty apartments, a gymnasium and conditioning room, and a cafeteria provide a complete learning environment.

## Academic Program

1. **Calendar and Program Emphasis.** Three programs are offered during the calendar year, scheduled to approximate the Provo campus calendar: fall, winter, and spring-summer (four-month programs).
    a. The semester programs are designed for students who are currently enrolled at a college or university seeking their first undergraduate degree. Most of the courses offered are at the upper-division level. Students are encouraged to prepare themselves in advance for this exceptional experience by taking such courses as Pl Sc 170, Geog 120, Hist 300, 302, Arab 101, Heb 101.

    b. All programs include field trips within the Holy Land and to Jordan and Turkey.
2. **Predeparture Orientation Course.** This Independent Study course (NES 100) is taken the semester or term before a student's work at the Jerusalem Center.
3. **Curriculum.** The following subject areas are currently taught at the center:

    a. Biblical Studies: Old Testament and New Testament

    b. Ancient Near Eastern Studies

    c. Modern Near Eastern Studies

    d. Introductory course in either Hebrew or Arabic.

    e. Elective courses in biblical studies, ancient and modern Near Eastern Studies, and archaeology as arranged each semester.

**Note:** Some courses taken at the Jerusalem Center for Near Eastern Studies may be applied toward degrees in Near Eastern Studies, International Relations, and other majors in the College of Family, Home, and Social Sciences. Students should contact their advisement centers concerning specific degree requirements.

**Jerusalem Center Home**

**Course Information**

## Undergraduate Courses

Courses offered at the Jerusalem Center are *not* offered on the Provo campus and hence cannot be retaken.

## Orientation Course

NES 100 : Jerusalem Center Orientation. (1:2:0)

PREREQUISITE: Application for a Jerusalem Center foreign study program.
DESCRIPTION: Introduction to the peoples and cultures of the Near East.
NOTE: Required of all participants prior to departure.

**Course Outcomes**

No outcomes are available at this time.

## Religion Courses

REL A 101 : Old Testament Survey. (2:2:3)

OFFERED: Offered only at the BYU Jerusalem Center for Near Eastern Studies.
WHEN TAUGHT: Spring; Summer
DESCRIPTION: Survey of the Old Testament, integrated with extensive field study in the biblical world; leads to understanding, appreciation, and application of scriptural teachings today.
NOTE: Jerusalem Center courses may not be repeated.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Old Testament narrative in its context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements of this course will be able to demonstrate that they have acquired and understanding of how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements of this course will be able to demonstrate that they have acquired an understanding of how selected Old Testament passages can be applied to daily living.

REL A 111 : New Testament Survey of the Gospels. (2:2:3)

OFFERED: Offered only at the BYU Jerusalem Center for Near Eastern Studies.
WHEN TAUGHT: Spring; Summer
DESCRIPTION: Survey of the New Testament Gospels integrated with extensive field experience in the biblical world; leads to understanding, appreciation, and application of scriptural teachings today.
NOTE: Jerusalem Center courses may not be repeated.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

REL A 303R : Old Testament Studies. (1.5-3:Arr.:Arr.)

OFFERED: Offered only at the BYU Jerusalem Center for Near Eastern Studies.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Study of the Old Testament integrated with extensive field experiences in the biblical world; leads to an understanding, appreciation, and application of scriptural teachings today.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Old Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the Old Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the Old Testament bears witness of the work of Jehovah.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected Old Testament passages can be applied to daily living.

REL A 311R : New Testament Studies of the Gospels. (1.5-3:Arr.:Arr.)

OFFERED: Offered only at the BYU Jerusalem Center for Near Eastern Studies.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Study of the New Testament Gospels integrated with extensive field experiences in the biblical world; leads to an understanding, appreciation, and application of scriptural teachings today.

**Course Outcomes**

- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament narrative in its historical and cultural context.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of the New Testament's fundamental doctrines and principles.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how the New Testament bears witness of the mission and message of Jesus Christ.
- Students who successfully complete the requirements for this course will be able to demonstrate that they have acquired an understanding of how selected New Testament passages can be applied to daily living.

## Near Eastern Studies Courses

NES 101R : Topics in Near Eastern Studies. (.5-3:ARR:ARR)

DESCRIPTION: Studies based on individual and program needs.

NOTE: Elective credit for major and minor. Offered at the Jerusalem Center for Near Eastern Studies only.

**Course Outcomes**

No outcomes are available at this time.

NES 136 : Introduction to Near Eastern Studies. (2:2:1)

DESCRIPTION: Survey core course in social science/humanities.

NOTE: Offered (as part of the summer term program) at the Jerusalem Center for Near Eastern Studies only. Elective credit for major and minor.

**Course Outcomes**

There are no course outcomes available

NES 326 : Introduction to Near Eastern Studies. (2:2:1)

PREREQUISITE: At least junior class standing.

DESCRIPTION: Social science/humanities core course.

NOTE: Elective credit for major and minor. Offered (as part of the summer term program) at the Jerusalem Center for Near Eastern Studies only. Does not receive GE credit.

**Course Outcomes**

No outcomes are available at this time.

NES 336R : Ancient Near Eastern Studies. (1.5-3:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Social science/humanities core course emphasizing ancient history extending to the Byzantine period.

NOTE: Elective credit for major and minor. Offered at the Jerusalem Center for Near Eastern Studies only.

**Course Outcomes**

There are no course outcomes available

NES 347R : (NES-Hist 242R) Arab and Islamic Civilization. (1-2:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Social science/humanities core course covering Arab and Islamic civilization; historical evolution of Middle East to present. Overview of modern Palestinian society.

NOTE: Elective credit for major and minor in NES. Offered at the Jerusalem Center for Near Eastern Studies only. Does not receive GE credit.

**Course Outcomes**

There are no course outcomes available

NES 349R : (NES-Hist 243R) Jewish Civilization. (1-2:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Social science/humanities core course; broad introduction to Jewish self-understanding and history, focusing on relationships among people, faith, and land.

NOTE: Elective credit for major and minor. Offered at the Jerusalem Center for Near Eastern Studies only. Does not receive GE credit.

**Course Outcomes**

There are no course outcomes available

NES 395R : Jerusalem Center Field Trips. (.5-1:0:Arr.)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Concurrent enrollment in NES 336R.

DESCRIPTION: The history, archaeology, and scriptural relevance of important places visited during participation in the BYU Jerusalem Center program.

**Course Outcomes**

- Field trips correlated with classroom study to maximize the advantage of on-site learning.

NES 398R : Advanced Topics in Near Eastern Studies. (.5-3:ARR:ARR)

DESCRIPTION: Studies based on individual and program needs.

NOTE: Elective credit for major and minor. Also offered at the Jerusalem Center for Near Eastern Studies.

**Course Outcomes**

There are no course outcomes available

NES 499R : Special Topics in Near Eastern Studies. (.5-3:ARR:0)

PREREQUISITE: Instructor's consent.

DESCRIPTION: Studies based on individual and program needs.

**Course Outcomes**

There are no course outcomes available

## Language Courses

ARAB 100R : Introduction to Arabic. (.5-1:Arr.:0)

OFFERED: Offered at the Jerusalem Center for Near Eastern Studies only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Beginning Arabic

**Course Outcomes**

- Demonstrate ability to socially interact with Arabs appropriately (control basic "God wishes," gender/status sensitive).
- Comprehend simple written and audio/video texts on familiar topics.
- Converse simply but successfully with native speakers of Arabic about self and family; order a meal, ask/give simple directions, and accomplish other basic tasks.

HEB 100R : Introduction to Hebrew. (.5-1:Arr.:0)

OFFERED: Offered at the Jerusalem Center for Near Eastern Studies only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Beginning Hebrew.

**Course Outcomes**

- Upon completion of this course, participants will have acquired the skills necessary to:- Speak Modern Hebrew at beginning levels- Read and engage beginning level texts in Hebrew, and express thoughts and ideas in written Hebrew- Understand the modern Israeli cultural tradition (including music, art, and literature)

HEB 314R : Intermediate Hebrew Language in Jerusalem. (1-3:Arr:0)

WHEN TAUGHT: Spring; Summer

PREREQUISITE: HEB 202

DESCRIPTION: Emphasizes intermediate conversation in everyday situations. Students role play various situations in class and then apply learning in Jerusalem.

NOTE: Offered at the Jerusalem Center for Near Eastern Studies only. Replaces Jerusalem Center core course equivalent of Hebrew 100R.

**Course Outcomes**

There are no course outcomes available

HEB 346R : Israeli and Jewish Civilization. (1-2:Arr:0)

| | |
|---|---|
| WHEN TAUGHT: | Spring; Summer |
| PREREQUISITE: | HEB 202 |
| DESCRIPTION: | Social science/humanities core course. Broad introduction to Jewish self-understanding and history, focusing on relationships among people, faith, and land. |
| NOTE: | Offered at the Jerusalem Center for Near Eastern Studies only. Replaces Jerusalem Center core course requirement of NES 349R (2 cr. hrs.). Does not receive GE credit. |

**Course Outcomes**

There are no course outcomes available

**Note:** Heb 314R and Heb 346R are offered as part of the Intensive Modern Hebrew program.

## Undergraduate Courses

**100-Level Courses**

STAC 100R : Intercollegiate Athletics. (.5:2:10.5)

WHEN TAUGHT: Fall; Winter

**Course Outcomes**

- Demonstrate competence and proper technique in chosen sport through practice and competition for the University Intercollegiate Athletics team.
- Demonstrate proficiency with the rules, strategies and scoring for the sport in practice and in competition.
- Demonstrate improvement in sport skills and physical fitness in practice and in competition.

: Intercollegiate Athletics: Cheer.

**Course Outcomes**

: Intercollegiate Athletics: Men's Baseball.

**Course Outcomes**

: Intercollegiate Athletics: Men's Basketball.

**Course Outcomes**

: Intercollegiate Athletics: Men's Diving.

**Course Outcomes**

: Intercollegiate Athletics: Men's Football.

**Course Outcomes**

: Intercollegiate Athletics: Men's Golf.

**Course Outcomes**

: Intercollegiate Athletics: Men's Swimming.

**Course Outcomes**

: Intercollegiate Athletics: Men's Tennis.

**Course Outcomes**

: Intercollegiate Athletics: Men's Track and Field.

**Course Outcomes**

: Intercollegiate Athletics: Men's Volleyball.

**Course Outcomes**

: Intercollegiate Athletics: Women's Basketball.

**Course Outcomes**

: Intercollegiate Athletics: Women's Diving.

**Course Outcomes**

: Intercollegiate Athletics: Women's Golf.

**Course Outcomes**

: Intercollegiate Athletics: Women's Gymnastics.

**Course Outcomes**

: Intercollegiate Athletics: Women's Soccer.

**Course Outcomes**

: Intercollegiate Athletics: Women's Softball.

**Course Outcomes**

: Intercollegiate Athletics: Women's Swimming.

**Course Outcomes**

: Intercollegiate Athletics: Women's Tennis.

**Course Outcomes**

: Intercollegiate Athletics: Women's Track and Field.

**Course Outcomes**

: Intercollegiate Athletics: Women's Volleyball.

**Course Outcomes**

STAC 102R : Adapted Physical Education. (.5:0:2)

PREREQUISITE: Medical referral.

**Course Outcomes**

- Accommodate students who are enrolled in a regular activity class and have become injured such that they cannot participate in full activity. Exercise program is geared to accommodate individual needs and abilities.

STAC 104 : Dance Aerobics. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Aerobic dance is an individualized dynamic fitness program designed to bring about an increase in total body fitness for participants of all levels of condition, ability, and needs.

**Course Outcomes**

- Students will learn how to perform a safe and effective workout for total body fitness.
- Students will evaluate their own physical fitness and set individual goals for improvement.
- Students will demonstrate an understanding of basic scientific principles regarding cardiovasular endurance, strength, flexibility, and lean/fat body ratio.

STAC 106 : Badminton, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter

**Course Outcomes**

- Demonstrate competence in the fundamental skills of badminton: clear, smash, drive and drop through class drills, practice and competition.
- Demonstrate an understanding of the rules, strategies, and scoring in badminton by passing a written test.

STAC 107 : Pilates. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Pilates strengthens and tones muscles, improves posture, provides flexibility and balance, unites body and mind, and enables a sense of mental control.

**Course Outcomes**

- Students will learn how to perform a safe and effective workout for total body fitness.
- Students will evaluate their own physical fitness and set individual goals for improvement.
- Students will demonstrate an understanding of basic scientific principles regarding cardiovasular endurance, strength, flexibility, and lean/fat body ratio.

STAC 108 : Zumba. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Zumba Fitness is a dance exercise program designed to bring about an increase in total body fitness for participants of all levels of condition, ability, and needs.

**Course Outcomes**

- Students will establish healthy perspectives on body image and appropriate health goals.
- Students will evaluate their own health and determine needed changes.
- Students will learn a variety of Latin, international, and folk dance movements adapted for the purpose of exercise.
- Students will gain an understanding of basic principles of exercise, physiology, and health maintenance.

STAC 109 : Yoga. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Yoga teaches how to exercise and/or meditate in order to unify the mind, body and spirit, feeling quiet in your mind, strong and energized in your body, and peaceful in your spirit.

**Course Outcomes**

- Students will demonstrate an understanding of basic yoga principles and practices.
- Students will learn basic sequencing and alignment for an Ashtanga Vinyasa practice.
- Students will develop a yoga practice that supports and honors their bodies.

STAC 110 : Indoor Cycling. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Students in the class will be guided through weekly cycling exercise sessions to improve their cardiovascular fitness and aerobic endurance as well as increase their leg muscle strength and power.

**Course Outcomes**

- Students will learn proper bicycle positioning skills and techniques to provide comfort, safety and efficiency while cycling.
- Students will learn some basica principles of endurance training and be exposed to a variety of cycling exercise programs designed to develop muscular endurance, strength and power.
- Students will understand basic principles of nutrition and hydration to support endurance exercise performance.

STAC 111 : Basketball, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate competence in the fundamental skills of basketball through class drills, practice and competition.
- Demonstrate an understanding of the rules, strategies, and scoring in basketball by passing a written test.

STAC 112 : Basketball, Intermediate. (.5:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 111 or equivalent.

**Course Outcomes**

- Demonstrate competence in intermediate basketball skills through class drills, practice and competition.
- Demonstrate an understanding of the rules, strategies, and scoring in basketball by passing a written test.

STAC 116 : Bowling, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

NOTE: Fee.

**Course Outcomes**

- Demonstrate competence in the fundamental skills of bowling through class drills, practice and competition.
- Demonstrate an understanding of the rules, vocabulary, strategies, and scoring in bowling by passing a written exam.
- Identify in a written exam the benefits of bowling as a physical activity and source of life-long enjoyment.

STAC 121 : Diving, Springboard. (.5:0:2)

WHEN TAUGHT: Fall; Winter

**Course Outcomes**

- Demonstrate competence in the fundamentals of diving in eight different dives from five different groups from the 1-meter springboard.
- Demonstrate an understanding of diving mechanics by passing a written midterm evaluation.

STAC 125 : Flexibility. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate the ability to assess flexibility progress through the completion of pre and post tests.
- Demonstrate an understanding of the strategies behind and importance of flexibility to improve and maintain good health by passing a written test.
- Demonstrate the ability to make life changing decisions about health and fitness by writing a one-month flexibility program.

STAC 131 : Golf, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate in drills and practice competence in the fundamental skills of golf on: drives, approaches, pitches, chips, and putts.
- Demonstrate golfing skills by playing three 9-hole rounds of golf.
- Demonstrate and understanding of the rules, strategies and scoring in golf by passing three open-book quizzes, reading responses and grade sheets.

STAC 132 : Golf, Intermediate. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ExSc 131 or equivalent.

**Course Outcomes**

- Demonstrate in drills and practice competence in the fundamental skills of golf on: drives, approaches, pitches, chips, and putts.
- Demonstrate golfing skills by playing three 9-hole rounds of golf.
- Demonstrate an understanding of the rules, strategies and scoring in golf by passing three open-book quizzes, reading responses and grade sheets.

STAC 136 : Gymnastics, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring

**Course Outcomes**

- Identify specific skills for each apparatus.
- Demonstrate elementary skills on each apparatus.
- Increase strength and flexibility.
- Demonstrate an understanding of the course requirements and gymnastics terminology by passing an exam.

STAC 139 : Jogging. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate an understanding of the scientific principles of exercise and nutrition and their effects on the body by passing a written exam.
- Demonstrate an understanding of training laws, principles, and theory by applying them when setting up a personal training program.
- Learn to utilize correct running mechanics, nutritional principles and specific physiological and biomechanical testing to avoid overtraining and injury.

STAC 141 : Martial Arts. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Show and explain proper etiquette expected in martial arts in a written examination and through daily class activities.
- Perform basic grappling control tactics in class to defeat larger and stronger opponents.
- Participate in grappling martial art competition.

STAC 143R : Physical Training--ROTC. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: For ROTC students only.

**Course Outcomes**

- Demonstrate in class activities knowledge, ability, motivation and experience to maintain Air Force fitness standards.
- Demonstrate in class activities familiarity with customary Air Force exercises and group physical training protocol.
- Learn and practice exericses and techniques to get high scores on the Air Force Physical Fitness Assessment.
- Generate Esprit de Corps, teamwork, and positive attitude toward maintaining a fit lifestyle.
- Demonstrate how to pass the APFT Army Physical Fitness Test scoring at least 70 in each event.Demonstrate how to pass the CWST Combat Water Survival TestTest individual ability to complete a four mile run in 36 minutes or less.Test individual ability to complete a six mile ruck march in 90 minutes or less.Employ a variety of exercise plans.Produce improved cardiovascular endurance.Transform and build physical strength.Discover self-imposed limits.
- Generate determination to overcome challenges as a team.Organize small group exercise periods.
- Manage healthy and well balanced eating habits.

STAC 146 : Racquetball, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate an understanding of safety precautions, rules, etiquette of singles, doubles, and cut-throat games of racquetball by passing four online quizzes.
- Demonstrate proper form and technique equivalent to at least a level D on the following skills: Serves, offensive shots, defensive shots, offensive and defensive strategies, drills.

STAC 147 : Racquetball, Intermediate. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate an understanding of safety precautions, rules, and etiquette of singles, doubles, and cut-throat games of racquetball by passing four online quizzes.
- Demonstrate proper form and technique equivalent to at least a level C on the following skills: Serves, offensive

shots, defensive shots, offensive and defensive strategies, drills.

STAC 150 : Ice Skating. (.5:0:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Developing figure skating and ice hockey skills.

NOTE: Taught off campus. Fee.

**Course Outcomes**

- Demonstrate the ice skating skills covered in the course using proper technique and form in a 1:00-3:00 minute choreographed group or solo ice skating program to music or during an individual exam on ice with the instructor.
- Demonstrate knowledge of ice skating history, protocol, ice rinks, skates, and figure skating by passing a written exam.

STAC 151 : Ice Hockey. (.5:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 150 or equivalent.

DESCRIPTION: Basic power skates, puck and stick handling, and game strategies.

NOTE: Taught off campus. Fee.

**Course Outcomes**

- Demonstrate the ice hockey skills covered in the course using proper technique and form in an organized game.
- Demonstrate knowledge of hockey history, hockey equipment, ice rinks, and rules and strategies of playing hockey by passing a written exam.

STAC 152 : Intermediate Ice Skating. (.5:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 150 or equivalent.

DESCRIPTION: Developing intermediate ice skating skills.

NOTE: Taught off campus. Fee.

**Course Outcomes**

- Demonstrate the ice skating skils covered in the course using proper technique and form in a 1:00-3:00 minute choreographed group or solo ice skating program to music or during an individual exam on ice with the instructor.
- Demonstrate knowledge of ice skating history, protocol, ice rinks, skates and figure skating by passing a written exam.

STAC 153 : Intermediate Ice Hockey. (.5:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExEc 151 or equivalent.

DESCRIPTION: Developing intermediate ice hockey skills.

NOTE: Taught off campus. Fee.

**Course Outcomes**

- Demonstrate the ice hockey skills covered in the course using proper technique and form in an organized game.
- Demonstrate knowledge of hockey history, hockey equipment, ice rinks, and rules and strategies of hocky by passing a written exam.

STAC 155 : Self-Defense. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Fundamental principles, skills, and techniques.

**Course Outcomes**

- Demonstrate the punch, kick, strike, and block skills used to evade or excape an attack by passing a simulation test.
- Demonstrate a knowledge of effective responses (verbal, physical, use of objects) to escape from an attack by passing a written exam.

STAC 156 : Soccer, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate basic soccer skills of : dribbling, trapping, passing, shooting, throw-in, goalkeeping, offense and defense strategies.
- Demonstrate an understanding of the rules and strategies of soccer by passing a written final.

STAC 157 : Soccer, Intermediate. (.5:0:2)

PREREQUISITE: ExSc 156 or equivalent.

**Course Outcomes**

- Demonstrate appropriate soccer skills by passing a skill assessment on: dribbling, trapping, passing, shooting, goalkeeping, heading, give-'n-go, support, through balls, back passing, etc.
- Demonstrate a knowledge and understanding of the game of soccer by passing a written exam.

STAC 161 : Skiing, Beginning. (.5:0:2)

WHEN TAUGHT: Winter

NOTE: Sections formed on basis of ability. Students responsible for following costs: bus transportation, ski equipment, lift fees. Students required to use bus transportation provided. Fee.

**Course Outcomes**

- Demonstrate motor skills sufficient to enjoy participation in skiing or snowboarding by passing a daily skill acquisition assessment.
- Demonstrate an understanding of mountain awareness, mountain responsibility, and equipment maintenance by passing a written exam.

STAC 162 : Skiing, Intermediate. (.5:0:2)

WHEN TAUGHT: Winter

NOTE: Sections formed on basis of ability. Students responsible for following costs: bus transportation, ski equipment, lift fees. Students required to use bus transportation provided. Fee.

**Course Outcomes**

- Demonstrate motor skills sufficient to enjoy participation in skiing or snowboarding as a lifelong physical activity by passing a daily skill acquisition assessment.
- Demonstrate an understanding of mountain awareness, mountain responsibility, and equipment maintenance by passing a written exam.

STAC 164 : Skiing, Cross-Country. (.5:0:2)

WHEN TAUGHT: Winter

NOTE: Students responsible for following costs: bus transportation, ski equipment, trail fees. Students required to use bus transportation provided. Fee.

**Course Outcomes**

- Demonstrate the basic skills of cross country skiing in classic and skating disciplines.
- Demonstrate an understanding of skiing safety, equipment, and fundamental definitions by passing a written exam.

STAC 170 : Swimming for Nonswimmers. (.5:0:2)

WHEN TAUGHT: Fall; Winter

**Course Outcomes**

- Demonstrate proper form and technique in the front and back float, front and back glide, freestyle, backstroke, and elementary backstroke.
- Demonstrate an understanding of swimming technique by passing a written exam.

STAC 171 : Swimming, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring

**Course Outcomes**

- Demonstrate proper form and technique in the standard swimming strokes (freestyle, backstroke, and breaststroke).
- Demonstrate a beginning swimming fitness level by completing a 500-yard swim test.
- Demonstrate ability to correctly set up swimming workouts by submitting a sample workout.

STAC 172 : Swimming, Intermediate. (.5:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 171 or equivalent.

**Course Outcomes**

- Demonstrate proper form and technique in all four competitive strokes.
- Demonstrate an intermediate swimming fitness level by completing a 650-yard swim test.

STAC 175 : Beginning Scuba Diving. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Developing scuba diving skills. Open Water Diver Certification upon successful completion.

NOTE: Taught off campus. Fee.

**Course Outcomes**

- Demonstrate mastery of the basic, fundamental skills of SCUBA by completing the PADI Open Water Diver certification in both pool and open water.
- Demonstrate an appropriate understanding of SCUBA diving theory by passing 4 quizzes and a final exam on the following subjects: diving physics and physiology, euipment, dive planning, emergency procedures, aqutic life and environment.

STAC 176 : Intermediate Scuba Diving. (.5:2:2)

WHEN Fall; Winter

TAUGHT:

PREREQUISITE: StAc 175 or equivalent.

DESCRIPTION: This class focuses on specialty techniques of SCUBA diving for divers who are already open water certified. The class is taught by Dive Utah (diveutah@diveutah.com).

NOTE: Taught off campus. Fee.

**Course Outcomes**

There are no course outcomes available

STAC 179 : Water Aerobics. (.5:0:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Exercise workout in water emphasizing flexibility, strength, and endurance.

NOTE: For nonswimmers and swimmers.

**Course Outcomes**

- Demonstrate an understanding of a variety of exercises in the water, including cardiovascular, muscle strengthening, and toning by showing an exercise routine to the class.
- Demonstrate an appropriate level of aerobics fitness

STAC 181 : Tennis, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate basic tennis stroke techniques of: ground strokes, serves, volleys, overheads and lobs.
- Demonstrate an understanding of essential tennis information regarding equipment, etiquette, facilities, scoring, and playing of the game by passing a written exam.

STAC 182 : Tennis, Intermediate. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ExSc 181 or equivalent.

**Course Outcomes**

- Demonstrate intermediate level tennis stroke techniques on: ground strokes, serves, volleys, overheads and lobs.
- Demonstrate an understanding of essential tennis information regarding equipment, etiquette, facilities, scoring, and playing of the game using singles strategy and doubles strategy by passing a written exam.

STAC 183 : Tennis, Advanced. (.5:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 182 or equivalent.

**Course Outcomes**

- Demonstrate competence in the advanced skills of tennis of: ground strokes, volleys, mashes, and serves.
- Demonstrate improvement in your game by learning how to play as a and against a counterpuncher, all-courter, and serve and volleyer.
- Demonstrate improvement in game by reducing unforced errors.

STAC 186 : Volleyball, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate competence in the fundamental skills of volleyball by passing a skill assessment on: underhand and overhand serves, forearm passing, setting, attacking, blocking, serve reception techniques, 4-2 offense and defense strategies.
- Demonstrate an understanding of the rules, strategies, and scoring in volleyball by passing a written test.

STAC 187 : Volleyball, Intermediate. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: StAc 186 or equivalent.

**Course Outcomes**

- Demonstrate competence in intermediate volleyball skills on: floater and top spin serves, forearm passing, setting, back setting, strong side and weak side attacking, blocking, serve reception techniques, 6-6, 5-1, and 6-2 offenses, and 4-2 defensive strategies.
- Demonstrate an understanding of the rules, strategies, and scoring in volleyball by passing a written test.

STAC 188 : Volleyball, Advanced. (.5:0:2)

PREREQUISITE: ExSc 187 or equivalent.

**Course Outcomes**

No outcomes are available at this time.

STAC 191 : Weight Training, Beginning. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate an understanding of the concepts and strategies associated with weight training by passing a written exam.
- Demonstrate a foundation of muscle strength by taking a muscle strength test.

STAC 192 : Weight Training, Intermediate. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ExSc 191 or equivalent.

DESCRIPTION: Theory and technique of maximal strength development, emphasizing "power" and "Olympic" lifts.

**Course Outcomes**

- Demonstrate an understanding of the concepts and strategies associated with weight training by passing a written exam.
- Demonstrate a foundation of muscle strength by taking amuscle strength test.

STAC 199R : Team Manager Internship. (1:0:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Interacting with athletic teams; testing personal management methods under the supervision of trained personnel.

**Course Outcomes**

- Demonstrate organization, competency and reliability as an asset to the management of the assigned team.
- Demonstrate proficiency in practice strategies, NCAA rules and game day preparation with the assigned sport.

### 200-Level Courses

STAC 201R : Extramural Sports. (.5:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

**Course Outcomes**

- Demonstrate competence and proper technique in skills of the sport through practice and competition for the University extramural team.
- Demonstrate proficiency with the rules, strategies and scoring in the sport through game preparation and execution in competition.
- Demonstrate improvement in sport skills and physical fitness.

: Extramural Lacrosse.

**Course Outcomes**

: Extramural Racquetball.

**Course Outcomes**

: Extramural Rugby.

**Course Outcomes**

: Extramural Soccer.

**Course Outcomes**

STAC 277 : Techniques of Lifeguarding. (2:1:3)

WHEN TAUGHT: Winter

PREREQUISITE: Swim competency test (given first day of class).

DESCRIPTION: First-aid and lifeguard skills training, including instruction in CPR, and American Red Cross certification for lifeguard training.

**Course Outcomes**

- Demonstrate competency in all required lifeguarding skills and activities that prevent, recognize and respond to emergencies.
- Demonstrate ability to provide care for injuries and sudden illnesses until emergency medical services take over.

STAC 278 : Water Safety Instructor Training. (2:1:3)

PREREQUISITE: ARC Swimmer--level competency.

DESCRIPTION: Leads to American Red Cross WSI certification. Swimming teaching methods that include teaching swimming to special needs students.

**Course Outcomes**

- Acquire American Red Cross certification to teach swimming and water safety courses.
- Demonstrate how to plan and organize courses using block and lesson plans.
- Practice teaching techniques and demonstrating required skills.

## 500-Level Graduate Courses (available to advanced undergraduates)

STAC 585 : Pedagogical Techniques in Exercise Sciences. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Graduate student with teaching assistantship in exercise sciences.

DESCRIPTION: Teaching methodologies for instruction in fitness and sports courses.

**Course Outcomes**

- Develop a Semester Unit Plan for an activity class they teach.
- Develop a list of activities appropriate for each of the four parts of the lesson plan for the activity class they teach. Incorporate these activities into the Semester Unit Plan.
- Students will improve their teaching through collaboration with other GTAs teaching their class.
- Students will use evaluation techniques that are fair and reflective of the students' abilities and knowledge. Techniques will be aligned with course objectives and outcomes.

# Student Development Courses

Tyler R. Pedersen, Chair
2516 WSC (801) 422-6291

Counseling and Career Center
2518 WSC, (801) 422-6291

Student development courses are offered by clinical faculty from the Counseling and Career Center, academic advisors from the University Advisement Center and other areas of campus, as well as by professionals in their respective fields. Courses offered in student development are intended to help BYU students with their educational, career, and personal development. When a student enrolls in a student development course they increase their ability to:

1. Raise their grade point average (GPA)
2. Manage their time
3. Be an effective decision maker
4. Improve performance on exams with better test-taking skills
5. Make reading a meaningful experience
6. Handle the notetaking challenge
7. Create strategies to deal with the expectations found in college
8. Explore and identify a major that is suited to their interests, values, and plans
9. Face the university experience with greater confidence
10. Recognize their developing personality and strengths
11. Grow in personal development as a college student
12. Develop personal awareness

## Undergraduate Courses

### 100-Level Courses

STDEV 100 : Essential College Skills. (1:1:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Developing essential college skills. Aims of BYU, values and goals, sound thinking skills. Learning styles and adjustment to college courses. College requirements and planning.

**Course Outcomes**

- 1. Articulate their educational values and goals and how they align with the purposes of a BYU education.
- 2. Analyze the effectiveness of their own planning/scheduling system and be able to demonstrate that they understand sound time management and goal setting principles.
- 3. Add new study and test preparation (study) skills to their existing repertoire.

STDEV 109 : Effective Study and Learning. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Learning to learn: motivation, time management, reading, listening, notetaking, test preparation, and memorizing; cognitive and ethical development in a learning environment.

**Course Outcomes**

- Students will be able to apply individualized time management strategies to their coursework and other activities.
- Students will be able to apply intentional memorization strategies.
- Students will demonstrate the application of effective college reading strategies.
- Students will be able to produce course lecture notes using a systematic note-taking system.
- Students will be able to apply effective college test-preparation and test-taking strategies.
- Students will be able to relate theories of college student development to their personal development and academic progress.

STDEV 117 : Career Exploration. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Applying theories of individual, academic, and career development to the university student. Exploring university opportunities and college majors; graduation planning.

**Course Outcomes**

- Increase knowledge of college majors, career options, and additional world-of-work factors that influence career choice.
- Develop greater awareness of personal qualities, interests, skills, and values that play a role in career-decision making.
- Demonstrate increased confidence and ability to make decisions as well as progress towards making career decisions.
- Display an awareness of and ability to access educational and career information resources.

STDEV 132 : Introduction to Tutoring. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Developing college-level tutoring skills; academic success and the tutoring cycle. Leads to level-one tutoring certification of the College Reading and Learning Association.

**Course Outcomes**

- Students will understand the goals, roles and best practices of tutoring.
- Students will achieve CRLA level proficiency in tutoring.
- Students will appreciate the value of tutoring.

STDEV 133 : Advanced Tutoring. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Developing advanced-level tutoring approaches and analytical thinking. Leads to level-two tutoring certification of the College Reading and Learning Association.

**Course Outcomes**

- Students will understand advanced tutoring skills.
- Students will appreciate the value of tutoring specific groups.
- Students will achieve CRLA advanced-level proficiency in tutoring.

STDEV 140 : Life Planning and Decision Making. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Individual development in life planning and decision making, emphasizing personal maturity, goal setting, and decision making abilities in areas of common concern to young adults.

**Course Outcomes**

- Understand developmental theories as they relate to young adult development, and evaluate your individual progress within the scope of these theories.
- Learn the main components of decision making and come to a better understanding of your personal decision making style and ways in which you may want/need to adapt it to better suit your needs.
- Become familiar with basic concepts of personality development and be able to identifyyour individual personality strengths and challenges
- Learn the components of goal setting and accomplishment and be able to set attainable goals for yourself.
- Learn the principles of time management and how it applies to decision making and life planning.

STDEV 141R : Individual Development. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Applying theories of psychological development (including rational living, positive psychology, and dialectical behavior therapy) in a self-assessment approach to promoting self-awareness and psychological development.

**Course Outcomes**

- Learn skills to achieve balance and competency in the developmental challenges facing college students and throughout the lifespan.
- Understand developmental theories on predictable life challenges at different stages of life.
- Learn and practice skills and psychological theories related to six areas of personal development.
- Set goals in each of the six areas, create a plan for implementing these goals, practice skills related to these goals and report on their progress.

STDEV 145 : Integrity for Life: Building Personal Character. (1:1:0)

DESCRIPTION: Exploring integrity in depth, applying critical thinking to moral dilemmas, creating a personal vision for developing character intentionally.

**Course Outcomes**

There are no course outcomes available

STDEV 168R : Law Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Exploring legal professions. Primary focus on guest lecturers representing various legal professions.

**Course Outcomes**

- 1. Understand what a legal education and career requires and provides.
- 2. Accurately assess whether or not a legal education and career is the correct choice for them.

STDEV 170 : Introduction to Health Professions. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of health professions: medical, dental, and other specialties. Primary focus on guest lectures from various practitioners and clinicians.

**Course Outcomes**

- 1. Students will gain a basic understanding of a significant number of health professions.
- 2. Students will increase knowledge of health professions through class presentations with health care professionals.
- 3. Students will learn more about health care provision through service learning in preparation for service-oriented health professions.
- 4. Students will increase awareness of the requirements to enter various health professions and where to find additional information about their preferred health care field.

STDEV 199R : Academic Internship. (.5-3:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Department internship coordinator's consent.

DESCRIPTION: Work experience evaluated by supervisor and faculty mentor and posted on transcript.

**Course Outcomes**

- Students will be able to better determine major and/or career paths based on hands-on experiences in the internship provider workplace setting.

**200-Level Courses**

STDEV 214R : Special Topics in Student Development. (.5-3:1:0)

WHEN TAUGHT: Contact Department.

**Course Outcomes**

There are no course outcomes available

STDEV 247 : Performance Psychology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Learning psychological barriers to peak performance. Developing effective techniques and routines to enhance performance.

**Course Outcomes**

There are no course outcomes available

STDEV 260 : Constitutional Research. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: The United States Constitution; research on original sources used to create the Constitution.

**Course Outcomes**

- Know and develop interpretation and analytic skills regarding the 7 articles and 27 amendments to the Constitution.
- Understand the current issues surrounding Constitutional articles and amendments.
- Improve their editing and research skills.

STDEV 261 : The Law in Literature. (2:2.0:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Examining how the law--including the justice system, attorneys, judges, and clients--has been portrayed in literary works.

**Course Outcomes**

- Have a better understanding of what a legal education and career requires and provides.
- Be able to more accurately assess whether or not a legal education and career is the correct choice for them.
- Be able to critically analyze portrayals of law in literature and other media forms to assess for accuracy.

STDEV 268R : Prelaw Leadership. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Leadership skills and strategies for members of the PLSA Board. Successful planning, implementation, and execution of prelaw activities.

**Course Outcomes**

- Understand what a legal education and career requires and provides.
- Assess whether or not a legal education and career is the correct choice for them.
- Learn how to effectively plan, implement, and carry-out effective academic activities for large groups of undergraduate students.

STDEV 271 : Preview of Dentistry. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Preview of dentistry with lectures by dentists; overview of required courses; application process; recommended extracurricular opportunities.

**Course Outcomes**

- Increase understanding of the dental profession.
- Understand the application process for dental school and analyze their individual preparation for this process.

STDEV 272 : Preview of Medicine. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Preview of medical practice with lectures by doctors; overview of required courses; application process; recommended extracurricular opportunities.

**Course Outcomes**

- Understand the application process for medical school and analyze their individual preparation for this process.
- Increase understanding of the medical profession.

STDEV 273 : Preview of Optometry. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Preview of optometry with lectures by optometrists; overview of required courses; application process; recommended extracurricular opportunities.

**Course Outcomes**

- Students will increase understanding of the optometry profession.
- Students will understand the application process for optometry school and analyze their individual preparation for this process.

STDEV 274 : Preview of Physician Assistant. (1:1:0)

WHEN TAUGHT: Winter

RECOMMENDED: St Dev 170.

DESCRIPTION: Preview of the physician assistant profession and PA school application process. Guest presentations by practicing PAs, PA school representatives, and pre-health advisors.

**Course Outcomes**

No outcomes are available at this time.

STDEV 278R : Pre-Health Leadership. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Leadership skills and strategies for leaders of pre-health clubs. Successful planning, implementation, and execution of pre-health club activities.

**Course Outcomes**

There are no course outcomes available

STDEV 290 : Learning Through Service: Theory and Application of Service. (1:1:1)

WHEN TAUGHT: Fall Contact Department; Winter Contact Department; Spring Contact Department

DESCRIPTION: Theories, applications, methods, and approaches to service.

**Course Outcomes**

- Learn and apply service and learning theories in their personal service interactions.
- Assess personal motivations and capacities for service.
- Facilitate students' service "identity," and aspirations for meaningful future service.
- Explore their roles as citizens and potential service opportunities and responsibilities related to family, civic, career, and church life.
- Enhance students' ability to gain related competence, skill, and understanding by reflecting on their service. Action-reflection tools and concepts will be modeled in the course to encourage students to make intentional learning connections with their personal values, beliefs, academic interests, individual skills, etc, and their service contributions.

### 300-Level Courses

STDEV 305 : Advanced Reading Strategies for College Success. (1-2:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Developing improved speed and comprehension skills through selection and practice of college reading strategies.

**Course Outcomes**

There are no course outcomes available

STDEV 317 : Career Strategies for Employment and Internships. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Preparing for employment and internship opportunities. Practical strategies to facilitate internship and/or career preparation: resumes, cover letters, networking, interviewing, and Internet research.

**Course Outcomes**

There are no course outcomes available

STDEV 318 : Graduate School Preparation: Practical Strategies for Becoming a More Competitive Applicant. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Preparing students to craft competitive graduate school application documents. Pragmatic strategies to facilitate preparation and understanding of references, graduate program research, personal statements, scholarships and financial aid, entrance exams, resumes and interviewing.

**Course Outcomes**

There are no course outcomes available

STDEV 358R : Student Leadership Development. (.5-3:2:2)

WHEN TAUGHT: Fall; Winter

TAUGHT:

PREREQUISITE: Instructor's consent.

DESCRIPTION: Analysis, synthesis, and integration of personal leadership experienced in an academic context. Successful leadership: decision making, communications, planning, team building, motivation, and interpersonal skills.

**Course Outcomes**

There are no course outcomes available

STDEV 359 : Conflict Resolution. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Survey of gospel principles, LDS teachings, secular theories, communication skills, and negotiation strategies for application in varying conflict management and dispute resolution situations. Includes simulation exercises and videos on negotiation and problem-solving techniques.

**Course Outcomes**

- Recognize the different dispute resolution methods and conflict styles most commonly practiced in society and their advantages and disadvantages.
- Describe the nature of conflict in human interactions and how way of being is more important than behavior in influencing relationships and determining outcomes of conflict.
- Apply the concepts about way of being and how to make things go right in relationships through specific homework assignments.
- Describe the primary principles of conflict resolution taught by Christ and leaders of the LDS Church and how those principles strengthen our ability to have a responsive way of being.
- Explain the difference between dialoguing and debating and apply the key skills for dialoguing.
- Describe basic negotiation strategies and practice negotiating in role-play scenarios.

STDEV 364 : Mediation Techniques and Practices. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Mediation techniques emphasizing practical application and observation of actual mediations.

**Course Outcomes**

- Know and apply the phases of the basic mediation process.
- Know how to prepare for a mediation session and be able to present the essential elements of a mediator's opening statement.
- Be able to identify issues and interests of the parties and set an agenda for the mediation session.
- Be able to skillfully conduct a mediation conference with joint and private meetings, allowing the disputing parties uninterrupted time for expressing viewpoints and interactive time to effectively exchange information, arguments, and offers of settlement.
- Be able to assist the parties in building and writing an agreement and to properly close the mediation session.
- Understand the basic rules of behavior for the parties in a mediation session and the common ethical practices of mediators.

STDEV 365 : Legal Education and Practice. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Successful legal education and practice. Preparation for those planning to attend law school.

**Course Outcomes**

- Students will be able to read, understand, and brief a legal case.
- Students will be able to effectively study and prepare for a law school final examination.
- Students will understand the major secondary sources used in legal research.
- Students will learn how to effectively communicate with others (focusing on legal aspects)
- Students will practice assimilating all legal research into a deliverable final product (memo/brief)

STDEV 368R : Prelaw Review Journal Writing. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Editing and publication for Pre-law Review authors and editors.

**Course Outcomes**

- Understand the procedure for publishing the Prelaw Review.
- Know how to use the Bluebook citation style guide.
- Improve essential legal writing skills.
- Work effectively in writing and editing relationships.

STDEV 375 : Dental School Preparation Laboratory Experience. (2:0:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Dental laboratory practices; tooth terminology, morphology, and anatomy. Procedures including oral pathology, diagnosis, and X-rays.

**Course Outcomes**

- Students will gain a basic understanding of dental sciences in preparation for their first semesters of dental school.
- Students will learn basic dental terminology and current issues in dentistry to better prepare them for the dental school interviewing process.
- Students will develop manual dexterity for skills that are required to perform dentistry.

STDEV 399R : Health Professions Internship. (1-3:Arr:Arr)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Internships with health care providers.

**Course Outcomes**

- Students will gain valuable experience by shadowing and working with current health professionals.
- Students will improve their ability to converse with health care professionals.
- Students will learn about different healthcare practices.
- Students will develop meaningful professional relationships with their internship providers.

### 400-Level Courses

STDEV 470 : Medical and Dental School Application. (2:2:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Preparation for medical and dental school applications; entire application process, including school identification and submission.

**Course Outcomes**

- Increase understanding of the medical/dental school application process. They will understand the various components of the application process and how to access resources to facilitate their professional school application.
- Assess their individual preparation for the professional school application process.
- Improve writing skills, particularly in respect to the personal statement.
- Improve interviewing skills.

STDEV 490 : Bachelor of General Studies Capstone. (2:2:0)

OFFERED: Independent Study only.
PREREQUISITE: STDEV 100; completion of all other BGS program requirements.
DESCRIPTION: Culminating course required for bachelor of general studies degree: analyze and evaluate BGS experience in light of the "Aims of a BYU Education" and summarize this experience in a reflective paper, integrate material learned in emphasis by completing a scholarly essay, and demonstrate accomplishment of learning outcomes.

**Course Outcomes**

There are no course outcomes available

STDEV 496R : Advanced Legal Internship. (1-3:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Legal internship coordinator's consent.
DESCRIPTION: Legal research; courtroom observation; client and attorney interaction; and reflection exercises.

**Course Outcomes**

- Understand what a legal education and career requires and provides.
- Accurately assess whether or not a legal education and career is the correct choice for them.
- Increase comfort interacting with legal professionals.
